FROM THOSE WHO HAVE BUILT

WE DO NOT solicit testimonials. We have no right to ask our customers for, or expect, testimonials. Every customer has a right to receive material as represented, courteous treatment and prompt service and need not say a word about it to us. However, to those customers who kindly and courteously voluntarily expressed their good opinion, we feel thankful. We are equally pleased to know they are satisfied.

There are perhaps many persons who, having had no dealing with us, are therefore, in doubt as to our ability to carry out our representations and for their benefit, we reproduce a few of the commendatory letters we have received.

It is our aim to fill each and every order as correctly as it is within the power of human beings to do. Every means is taken to prevent errors and if one is made, it will be remedied quickly and without injury to our customers.

Note.—We do not reproduce the Post Office address of the customers for the reason, first, to prevent unscrupulous would-be competitors and members of the various Lumber Trust Dealers Associations from writing anonymous letters, causing our customers a lot of unnecessary correspondence. Second, to protect our customers from the merely curious.

To anyone showing sufficient interest and an honest intention to purchase, we will be pleased to furnish the Post-Office addresses of any or all that may be requested.

READ THE FOLLOWING—WE HAVE HUNDREDS MORE.

SAVED \$1,000.00.

This customer also built Design No. 6.

—Pennsylvania.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen:—My house being completed, and I am living in it, I take pleasure to inform you that it is one of the greatest houses in our town. I have had over two hundred people inside looking at this house. I have given a number your address. No doubt

you have heard from some of them. If you have not already, you soon will. I have had men from three other towns looking at it and they all think it O. K.

Everything arrived in good condition. Found everything alright. I saved on the building, including steam heat, and bath room outfit about \$1,000 as this kind of lumber would be very dear here. My house is open for inspection at all times. (Signed.) LEWIS YOUNG.

HOUSE DESIGN No. 138.

—Michigan.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen:—Received the crown moulding all right. This now completes the order for House Design No. 138.

I wish to state for the benefit of those who contemplate ordering from your house, that I am more than pleased

with the quality of the material you sent also with the liberal allowance you made in sending enough to construct the design.

You are at perfect liberty to use my name if it will aid you any

(Signed), A. A. CHESMAN.

CHECKED UP O. K.

—Pa.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen: I beg to advise that the house is completed and will be occupied this week. Am more than pleased with the material you furnished, as well as the treatment I received. All material was A. No. 1 and there was plenty of each kind.

Very respectfully, GEORGE E. SHERER.

SAVED \$310.

—Iowa.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen:—I now have my barn built and am very much pleased, in fact, I received better lumber from you than I could get at our home yards, besides you saved me just \$310.00. I am sure you will receive lots of orders from this county. (Signed), D. P. EASTMAN.

TWO (2) HOUSE DESIGNS No. 156.

"Business relations delightful."

—Kentucky.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen:—Everything in save the last small remnant, we have never had dealings with any firm, nor individual where more perfect satisfaction has been given.

A delight it has been to have business relations with the Chicago House Wrecking Co. Every item of material is first-class for its kind or purpose. As soon as building is completed will be pleased to send you a photograph of same.

(Signed), M. S. BROWNE.

"MUCH BETTER THAN EXPECTED."

—Conn.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen:—Have received and unloaded House Design No. 157, now No. 41 and found everything in first-class shape. Not a thing broken or cracked. The lumber is much better than expected and the

mill work and hardware O. K. Carpenters are rushing the work at present and will sure have it up. I think you will get more orders from here for a number of persons have looked at my place with good intentions and are very much pleased.

Will send you photo and letter to publish later.

Thanking you for past favors, I am sincerely,

(Signed), OTTO A. JENCKS.

HOUSE DESIGN No. 130.

—Connecticut.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen:—The car of lumber No. 26,760, N. Y. C. & St. L. (House Design No. 130), arrived here May 12th, and would say as far as I have seen the lumber is O. K. I have not had time to

check it up but will do so this week, but I do not expect to find any difference between the bill of lading and the bill of material. I saw the Oak trim, ordered special, and will say it is A No. 1.

(Signed), WM. E. CONLON.

MUCH PLEASED.

—Kans.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen:—We received the lumber and are very much pleased with it, and we will advertise your lumber well.

(Signed), G. J. TANGEMAN.

HOUSE DESIGN No. 117.

—Iowa.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen:—The car of lumber you sent me was delivered to me at Johnson Station last Saturday, and I had the lumber unloaded Monday and Tuesday, finishing

late Tuesday evening.

In regard to the character of the lumber, I want to say to you that I am exceedingly well pleased and satisfied so far as I have been able to inspect it, and so is my carpenter, who, as I explained to you, is probably the best carpenter in the city, and a very good judge of lumber.

(Signed), JOS. H. JONES.

SAVED \$700.

Special design made to order for him.

—Ohio.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen:—Enclosed please find proof of house and will send photograph of same as soon as possible can.

I will assure you gentlemen, that I am perfectly satisfied with all material sent me and that my house has got the best material in it of any on the street. I also wish to

state if you have any inquiries from Cleveland about lumber or heating plants or plumbing, don't be a bit backward in referring them to me as I will do all in my power for the Chicago House Wrecking Co., for the reason that you have done all and if anything more than you agreed to do by me.

I also wish to state that I saved on house, seven hundred dollars (\$700.00), and also got better material and a better house.

(Signed), JOHN J. DUNN.

BARN DESIGN No. 221.

—Missouri.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen:—Several months ago, I purchased from you a bill of lumber for a barn. The order was filled in a manner that was entirely satisfactory and everything was as you represented it. It was for barn design No. 221.

(Signed), JOHN E. RYLAND.

ALL IS O. K.

—South Dakota.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen:—I received my car of lumber in good time and all is O. K. except the transom which you have advised me will come later. I would like to have one of your catalogs and book of plans of houses.

(Signed), A. C. COOPER.

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

A HOME

Is Within Your Reach No Matter How Limited Your Income.

THE object of this "Book of Plans" is to enable you to purchase with the greatest economy all the material to build any home or design illustrated. The Chicago House Wrecking Company, originators of all new building ideas, comes to you with the most perfect home-building proposition ever before presented.

We propose to furnish you first-class, brand new, high-grade building material of standard manufacture and grading, accom-

panied by valuable Blue-Print Plans, Specifications and Material List, to construct complete any of the designs shown in this book.

By our up-to-date building proposition you can buy a home at just about fifty cents on the dollar, compared to the usual procedure. You eliminate all middlemen's profits. There is no uncertainty as to what you are going to get. You can dispense with the necessity of having plans drawn by architects. We come to you with a finished proposition, all laid out carefully along thoroughly practical, modern and economical lines. There is every reason why by our wholesale method we can give you a better home-building proposition than your local market affords. Our business extends from the Atlantic to the Pacific and from the Gulf of Mexico to Canada. In other words, the ideas brought forth in this book are the result of the combined demands of the home-building public of this great territory, and we can say, without fear of contradiction, that our proposition and our plans, as a whole, are the best.

Contrary to our name, however, we do not wreck houses; we have outgrown this many years ago, and handle little or no second-hand material except in the machinery and kindred lines. In connection with our great general merchandise establishment, we have one of the largest lumber yards right in the heart of Chicago, and immense warehouses where all better stocks are constantly under cover.

The Chicago House Wrecking Company was organized in 1893, since which time it has sold millions of dollars' worth of merchandise throughout the world, and our name is known broadcast. Our capital stock and surplus is over \$1,000,000, and as to our standing in the commercial world, we refer you to any bank or banker, any express company, publishers, mercantile agencies, or you can write direct to our depository, the Drovers Deposit National Bank and the Continental and Commercial National Bank of Chicago.

But we can give you something that will come nearer being the "proof of the pudding" and that is copies of commendatory letters we are constantly receiving from customers who have purchased our material and saved big money, and quite likely there will be among them some from your vicinity.

Our guarantee is of a broad and binding character. We positively guarantee that every dollar's worth of merchandise purchased from us, whether it be a complete house bill or a single item, will be exactly as represented. Should anything prove to the contrary, we will make good. By this we mean, we will either take back the merchandise, pay freight on same, refund you the price paid us for it, or adjust matters honorably and satisfactorily. With this positive guarantee before you, there is no chance of making a mistake in buying from us. We want satisfied customers. We have learned the virtue of advertising of this character and we are anxious to make a satisfied customer of you.

Photographic Scenes of Our Great Lumber Department

OUR GUARANTEE

All material furnished is guaranteed to be brand new, the grade, size and style specified, and the quantity sufficient to complete the design according to the plans. We guarantee our customers entire satisfaction.

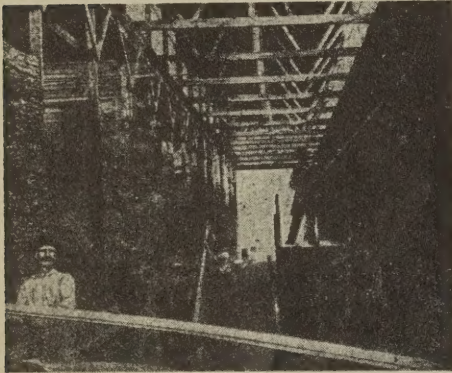

Office Force, Lumber Dept. Force (partial views only)

OUR RELIABILITY

\$1,000,000.00 capital stock and surplus, unquestionable Bank and Mercantile references besides 17 years of honest dealing, and an ever increasing patronage is proof positive that we "make good"

FACTS FOR CAREFUL BUYERS

Interior View of Dry Sheds, where Finishing Lumber is kept.

IN presenting to you these photographic reproductions of actual scenes at our plant here in Chicago, it is not out of place to give you a few facts concerning the splendid progress made by our Building Material Departments, and the wonderful success with which our house designs have been accepted by the public throughout this broad land.

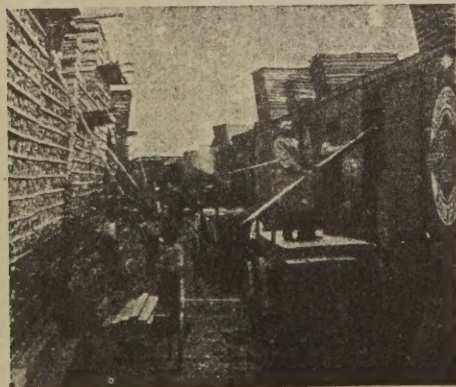

We are the originators of the idea of giving a Plan Book abso-

lutely free and of furnishing Blue Print Plans, Specifications and Material List practically free as outlined in the following pages. Others have attempted to imitate us, even going as far as copying our most successful designs, but a careful comparison will show that they are only beginning where we have left off—trailing after us, so to speak.

We are the largest establishment in the United States selling building material in this manner, direct to the consumer, and we are the only establishment of our magnitude that carries its stock at one plant, where it can be seen and inspected either before or during the time it is being loaded, and from where you can generally load all your material for one building in one car.

The photographs we reproduce here are not "myths" or copies of other concerns' lumber piles, etc., etc. They are photographs taken on the spot, and we will gladly prove this to any visitor by actual comparison. Space prohibits the reproduction of many more interesting scenes.

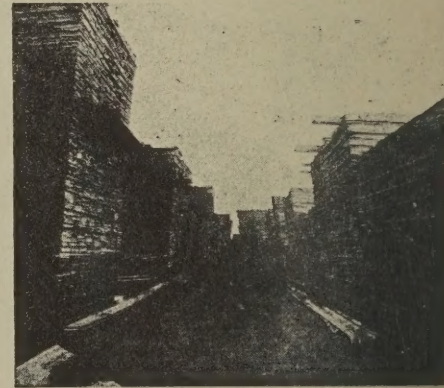

We handle BRAND NEW Building Material only, and have a capacity of 50 to 75 carloads per day. We have one of the finest dry sheds for taking care of finished lumber, and one of the finest and most modern equipped

An Alley-way in Our Mammoth Lumber Yards.

buildings for taking care of interior finish, mill work, doors, sash, etc. All in all we are better equipped to handle your order than any establishment that must get its supplies from various factories distributed throughout the United States at different points, from which shipments are made you piecemeal, a method both unsatisfactory and expensive.

Mill Work Shed, Windows, Doors and Mill Work.

FOREWORD

Important to Read:

The Chicago House Wrecking Company is the only concern selling materials to practically complete buildings, direct to the consumer or contractor at a great saving in price.

ORDERING material of this class is a very simple matter through our system, and our facilities for furnishing this material are practically unlimited. Think of being able to get the material for house or barn through one firm, through one source and under an iron clad guarantee and know that everything has been worked out to a nicety as regards the material in general, the design, style, and quality harmonizing.

If you have built before you must certainly realize what a wonderful convenience it will be to you to be able to get all your material not only through one source, but at a great saving in price, as compared against the necessity of purchasing same "piece meal" from the many different sources that you may have been compelled to do in your previous operations. We ask you to read carefully our Free Plan offer telling you how you can secure the Plans free and our General Specifications, which tell you all about the material, and by all means avail yourself of our very liberal offer regarding Plans, Material List and Specifications. By doing this everything will be so simple and clear in your mind that you can readily appreciate it all.

In preparing this edition of our Plan Book, our aim has been to produce designs to meet the requirements of all conditions and localities and to approach near enough to individual tastes so that any changes suggested by individual preferences may be made in any of these plans without destroying their distinctive features. We have cut loose from all the old and wasteful methods and ideas of design and building construction and present many entirely new features never before attempted in houses of moderate cost.

Believing that mere size is not an indispensable item as regards comfortable and convenient arrangement of the interior, we have developed our designs along modern lines, sensible and economical, and present them to a wise buying public with the full confidence that they possess many convenient features, uniform and harmonious effects. In this collection will be found not only comfortable and convenient homes at exceptionally low prices, but also designs that are a profitable investment. They will easily rent at a monthly return that will net a large dividend, or may be readily sold at a good profit above cost, as with our system all costs are reduced to the lowest minimum.

The advantage of buying all the material necessary for the construction of a building from one source is apparent to all, but in buying from this Company there is a further advantage in the fact that we make a study of furnishing materials that will build the house to the best possible advantage and at the lowest cost, not only considering the cost of material, but the cost of construction as well.

Our position in the market enables us to buy at a figure impossible to others, and to sell at prices lower than the material costs many regular dealers. The dealer then must add his tremendous profits. There are many further advantages in buying from us because, customers not only get the material that goes into the construction of a design from one source, but they know that everything has been selected to harmonize and to give the best results.

No firm in the country is as well equipped to supply the demand for building material of all kinds as we are. We have many opportunities of buying materials at reduced prices, for we buy at Sheriffs', Receivers', Manufacturers' and Assignees' Sales, whether the amount is a thousand dollars or a hundred thousand and take advantage of all these opportunities which enables us to give our customers the benefit of the low prices arising therefrom.

We can furnish you with anything that is necessary for the construction of your house, not only lumber, hardware, sash, doors and millwork, but can furnish you with your plumbing outfits and with either hot air, hot water or steam heating plants and also the innumerable accessories that are necessary to a house, not forgetting our complete line of furniture, rugs and carpets, all in brand new, bright and clean stock.

Our regular catalog, showing our complete line of material with full description and prices, will be sent to you on application. Perhaps you have this catalog now, and if it is not our latest edition, we trust that you will send for it. It is necessary that every buyer should have this catalog and be well posted in the different lines of material which we have listed in it. We are always making improvements in our House designs. We do not stand still. We are continually moving forward and are able to give you some of the newest and latest features in the construction line.

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

OUR FREE PLAN OFFER.

By this extraordinary offer you can secure, free of charge, all the assistance you need for the proper and economical construction of your house or barn.

We save you from 25 to 50 per cent on your completed building and give you free of charge, a set of Blue Print Plans, Specifications and Descriptive Material List, together with any information you may need for the completion of your building.

OUR PLANS

Our Plans are drawn by experienced Architects, men who have been on the job, and know what they are about. They are not "picture house" plans, such as are offered on the market at from 10 to 15 times the price we ask for ours, and sold merely for the purpose of selling the plans, regardless of how they will work out, or whether the customer will save money in his building. Our Plans, Material List and Specifications, if procured from an Architect of any reasonable standing, could positively not be obtained for less than \$25.00 to \$100.00 per set, and our price is only \$2.00, with \$1.50 refund, as specified below, if they do not suit, so the most you could lose would be the small sum of 50 cents, which hardly covers cost of carriage. Our designs are all practical, up-to-date, modern, constructed with a view to proper strength, beauty, utility as well as economy and ease of construction.

OUR BLUE PRINT PLANS CONSIST OF THE FOLLOWING:

- | | |
|--------------------------|--------------------------|
| 1. Basement Plan. | 5. Right Side Elevation. |
| 2. First Floor Plan. | 6. Left Side Elevation. |
| 3. Second Floor Plan. | 7. Rear Elevation. |
| 4. Front Elevation Plan. | 8. Detail Sheets. |

All drawn correctly to scale $\frac{1}{4}$ to 1 foot, unless otherwise shown.

MATERIAL LIST

Our List of Material is complete in detailing all the items needed and the purpose for which they are intended. By the use of this List in connection with our Catalog, Plans, Detail Sheet, and Specifications the whole matter will at once become clear to anyone the least bit familiar with the work in hand, and you will see all matters simplified to a minimum.

ACCURACY

Our guarantee that we will positively furnish sufficient material to erect the building according to Plans, Specifications, etc., is backed by our enormous capital and our unassailed reputation, and you can readily understand it is of the utmost importance to us, as well as to yourself, to see that our material lists are correct, our Plans strictly accurate, and that sufficient material is allowed in every instance.

PRICES: All quotations on our Designs are net F. O. B. Cars, Chicago. They are correct at the time of publication of this book. If you want our freight paid prices on any Designs, write us and we will gladly furnish same.

TERMS: Full remittance should be sent with order. If you do this, it will save delays and annoyance in getting possession of the material at your end of the line. You run no risk as our binding guarantee backs every representation and is made you through the United States mail which is very strict in such matters. We urgently request that remittance in full be sent with order.

PART REMITTANCE can be made by sending us at least 25 per cent of the amount of the order, and material will be shipped, balance to be paid C. O. D., material subject to inspection, if desired.

NO PAYMENT IN ADVANCE: If either of the foregoing terms do not meet with your approval, we will furnish you a Bank Guarantee Blank to be signed by your Banker, Building Association or Trust Company. Upon receipt of this Guarantee properly filled out, we will make shipment without one cent down, and you will have 5 days after its arrival to inspect and check up the material and send us payment for same.

After carefully looking through this Book of Designs, select one or more that pleases you and write us. We will name you prices DELIVERED F. O. B. CARS YOUR STATION, safe delivery guaranteed of every item, and everything to be shipped free of all freight charges. You will know exactly what the material costs you laid down at your station. There will be no guess work about it.

After receiving our delivered price and you determine which design you want, then it is time for you to get a set of Blue Print Plans, Specifications and Material List so that you can see just what the house is and what you get for the price made you. We send you a set of these Plans, Specifications and Material List, as described above, transportation prepaid, for the very low price of \$2.00, but this is only as a deposit and guarantee of good faith and as a protection to us. You can readily see the \$2.00 cannot begin to cover the cost of plans, and we could not afford to do this if we did not expect to sell you your house or barn.

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

OUR FREE PLAN OFFER

If after you have seen and looked over your Plans carefully, finding them satisfactory, which we are sure you will, as they are thoroughly practical and reliable, and you send us an order for the material for the Design, we credit you on your bill with the \$2.00 you have advanced us, and the plans thus become your property absolutely free of charge.

If, however, for any reason you decide not to use the Plans, Specifications and Material List, and return them to us in good order within 20 days, by first class postage, properly marked so we can identify where they are from, we will refund you \$1.50, thus making the information cost you only 50 cents, which you can readily understand does not begin to pay us for the labor, but is merely a protection to us against thousands of people who would send for Plans out of mere idle curiosity.

QUALITY OF MATERIAL

All the material used in our House Designs is BRAND NEW, guaranteed fully up to the grade specified, of clean, fresh, bright stock. Our millwork and hardware is the latest, newest designs, the patterns of everything in general being uniform and consistent, keeping in class with the design it applies to, and only such material as would be furnished by any reliable contractor who had his customers interest at heart.

By referring to our "Material Specifications" on following pages you will be able to get a good and practical idea of the kind and quality of the material we furnish. In all cases, however, the Material List accompanying Plans and Specifications for each respective design, governs, as it is not practical to make one general Specification to cover the great number of designs we present herein.

CHANGES FROM PLANS

Such changes as moving a partition back or forward, or a door and window, or as light change in stairway, can easily be made by your carpenter, and seldom makes a change in the Bill of Material or in the cost of the building's construction. If changes of a more serious nature are required, it will be advisable for you to send for a set of our Plans as per our liberal offer—study them carefully—and perhaps you will not want the changes at all. If you do, however, you can advise us fully by mail.

CHANGES IN MATERIAL

After you have carefully looked over our List of Material and find that you wish some changes made in the quality of the material, either cutting down or increasing the expense—for instance, such as oak finish, floor or stairway, style of windows or doors—tell us about it. We will be glad to make you full allowance for what you cut out, and name you very low prices for any material you may wish to add.

REVERSED PLANS

We can furnish Reversed Plans for any of the designs shown. A Reversed Plan means that the rooms will be just opposite from the way they now appear. This, however, will necessitate the customer getting two sets of plans, one same as the original in the book, and one reversed. The printing on the reversed will be backwards, therefore, requires two sets. For this it is necessary to make an additional charge of \$1.00, making a total charge of \$3.00 for the two sets. No Refund will be made on the reversed plans.

PLANS TO ORDER

SPECIAL PLANS TO ORDER

How to Secure Them FREE

We employ a staff of competent and experienced Architects, Designers and Estimators. Should you wish Blue Print Plans for a house to your special order, send us rough pencil sketches, with your general ideas. We will reply at once, advising you the cost of Plans, Specifications, Descriptive Material List and a guaranteed quotation naming you delivered prices for the material necessary to construct your building.

Our charge for the above ranges in price from \$15.00 up. This all comes to you FREE, as the amount you pay for plans is to be deducted from the cost of your material if you purchase from us and thus you secure SPECIAL PLANS FREE.

We are also prepared to furnish you Artist's Pen and Ink Drawings, as well as Wash Drawings, showing just how your building will appear when finished.

See page 48 of this Book for full information and specimen copy.

When writing about Special Plans, be sure and mention "Special Plan Offer No. 23-582."

OUR \$5.00 "SKETCH PLAN" OFFER

Read Our Liberal Offer

Perhaps you have in mind a plan of your own for a house, barn or store building, and would like to see how this house actually would work out, architecturally drawn to scale, and how it would look.

We will furnish you pencil plans of the first and second floor and front elevation for \$5.00, and then if you decide to order Regular Blue Print Plans as outlined on page 43, of this book, the amount you have paid for the pencil plans will be applied on the cost of the blue print plans.

These pencil plans will then be subject to correction and new pencil plans furnished if desired.

All our work is done by practical men who will incorporate your ideas if they are at all practical, and who many times can include suggestions that will improve your design and reduce the cost.

Our \$5.00 offer covers any ordinary house up to 10 rooms, or any barn, or similar building.

In writing be sure to mention "Sketch Plan Offer 23-581."

REASON FOR OUR LOW PRICES

There are many reasons why we can undersell our competitors. In the first place, we cut out all middlemen's profits on the various items and give our customers the benefit of these savings. We purchase much of our material at special sales under most favorable conditions. We have every facility for handling orders in the quickest possible dispatch and with the least possible expense.

We are satisfied with small profits. We have thousands of testimonials from satisfied customers and see no reason why we cannot make one of you.

CHICAGO HOUSE WRECKING CO., 35TH & IRON STREETS, CHICAGO.

GENERAL MATERIAL SPECIFICATIONS

OF

MATERIAL FURNISHED FOR OUR DESIGNS.

ALL BRAND NEW MATERIAL.

The following specifications are only general, so as to give prospective customers an idea of what we furnish.
The Material List accompanying plans gives exact details, size, style, quality and catalog numbers.

GIRDERS AND BEAMS: All girders and beams, posts, etc., as shown on plans and called for by the List of Material, will be furnished of a No. 1 grade Southern Pine, square edge and sound, and of correct dimensions according to their requirements.

JOISTS, RAFTERS, STUDDING, ETC.: The necessary quantity of studding, joists, rafters, bridging, etc., are furnished in No. 1 grade Southern Pine, in the correct lengths to work most economically and satisfactorily, and in the sizes to insure proper equalization of strength and symmetry, all to be square edge and sound material, entirely suitable for the purposes intended.

SHEATHING: For the roof, siding and floors we furnish square edge Southern Pine, Northern Stock Sheathing of a suitable grade, standard lengths and widths. Roof sheathing to lay with a spacing for shingles unless patent roofing is specified. Subflooring to be of sufficient quantity to cover all floors as specified in the Material List, and plans, as well as box sheathing for the entire outside of the house.

SHINGLES: To be Washington Red Cedar shingles, Extra Star A Star quality, or White Cedar shingles of the same value if desired by the customer, unless patent roofing is specified. The quantity we furnish is sufficient to lay the shingles $4\frac{1}{2}$ inches to the weather.

LATH: For the lath we furnish Regular Minnesota No. 1 Soft Pine lath, 32 or 48 inches long as may be agreed upon.

SIDING: For siding we furnish Beveled siding; also known as "Weatherboarding" or "Lap Siding," $\frac{1}{2}$ x6, or $\frac{1}{2}$ x4, in either clear Oregon Spruce or clear California Red Wood, "B" Red Cedar, or "C" White Pine, Clear Cypress or Poplar, unless specified to the contrary in our bill of Material.

FLOORING: For flooring we furnish Clear Georgia Pine finished flooring, for first and second floor, unless specified to the contrary on our Material List. For porch flooring we furnish Clear Quarter Sawed Fir or a No. White Pine porch flooring as Material List may specify.

EXTERIOR FINISH: We furnish all corner boards, all base boards, cornice boards and other exterior finish in Select White Pine or Clear Soft Oregon Fir stock. Porch ceiling and cornice soffits in $\frac{3}{4}$ inch thickness Southern Pine, Matched and Beaded Stock.

MILLWORK

FRAMES: We furnish all window frames of sound, clear stock, $1\frac{1}{2}$ x4 $\frac{1}{2}$ outside casings, and $\frac{7}{8}$ -inch pulley stiles, plowed and bored ready for pulleys. Door frames with $1\frac{1}{2}$ x4 $\frac{1}{2}$ inch outside casings, $1\frac{3}{4}$ inch rabbitted jambs, with hardwood sill. The basement door and sash frames to be plank frames, door frame made from 2x8 stock, and sash frames from 2x6 stock. All frames will be made up ready to put in place and window frames will be fitted complete with pockets and pulleys, but all such frames are shipped knocked down to save freight and breakage.

PORCHES, ETC.: The Columns of the Porches to be as shown on plans, either solid Turned Column, or built up Doric, Tuscan, or Ionic Column. All porches to be furnished with or without balustrade, as shown on plans. We furnish all crown, bed, neck, cove, and nosing mouldings, etc., that are required, all to be of patterns and numbers as shown and specified in Material List.

DOORS AND SASH: All windows figured for our plans are $1\frac{3}{8}$ inches thick, check rail and glazed as specified in List of Material, with either single or double strength clear glass, or plate or leaded glass if specified. All sash stock is strictly clear and primed in oil. All inside doors "A" quality $1\frac{3}{8}$ inches thick, sizes and styles marked on plans and specified in the List of Material. The outside front door and rear door to be glazed and of the size and style as specified in list and of $1\frac{1}{4}$ inch thickness, unless otherwise shown on Material List.

INTERIOR TRIM: Material for this work to be Clear Georgia or hard Pine, unless specified to the contrary, including all door and window casing, baseboard, carpet strips (door jambs are cut to size and ready to put together), base blocks, cap moulding, door and window stops, chair rail, picture moulding, etc. Thresholds will be furnished in clear Oak. All the foregoing material is entirely suitable for natural wood finish, or any of the many beautiful stain effects now so deservedly popular. Illustrations of our patterns as shown in Catalog are detailed full size on sheet with Blue Print Plans.

STAIRS: We will furnish newels, angle newels, rails, balusters, etc., all finished and sanded ready to be put up. For the carriages, facia boards, wall strings, treads and risers, we will furnish the necessary lumber in the required thickness and widths in sufficient quantity to complete the stairs.

HARDWARE: We furnish all mortise front door and inside door locks of appropriate design; all door butts, sash lifts and fasteners to match. The numbers given are shown in our Catalog with full description. We also furnish the necessary sliding door hangers, sash weights, cords, pulleys, base knobs, coat and hat hooks, and common and finishing nails, etc., for the completion of the entire job.

BUILDING PAPER: We furnish sufficient building paper to cover the entire sides of the building all four sides.

GALVANIZED IRON: Under this branch of building work we furnish all the necessary down spouting, guttering with necessary fittings, flashings, tin shingles, etc., and all in the best galvanized iron, and every item as specified in our List of Material.

RECAPITULATION

The above will give you a convincing and sufficient general idea of the high class of material we furnish, and you will note that it is practically everything necessary to build the house, including all lumber, millwork, sash, doors, glass, hardware, nails, guttering, spouting, etc., that is necessary for its construction from the foundation up, excepting masonry work and painting.

SPECIAL QUOTATIONS

We are prepared to furnish with any of our designs either Hot Water, Steam, or Hot Air, Heating Plants. Complete Bath and Kitchen plumbing outfits.

By referring to our general catalog you will see illustrated and priced, our extensive line of mantels, consoles and grates, as our prices on our designs do not include these, nor china closets, sideboards, or any such furnishings except where it is clearly stated in the description and in the material list. These items will be furnished to suit individual tastes and requirements at the very lowest possible price.

We can also supply you with the necessary amount of high-grade paint and oil finish for any of our designs, with the proper assortment and quantity of colors.

We do not furnish any masonry materials such as Brick, Lime, Cement or Plaster, as the freight on these items is generally too high to allow us to ship them at a saving to our customers at any great distance.

7 ROOMS AND BATH.

HOUSE Design No. 6 is known practically from one end of the United States to the other although it has not been on the market for more than six or eight months. It is positively the most popular design ever placed on the market. The extreme low price of \$650.00 at which we originally offered it to the public was made when material, both as regards lumber and mill work, was considerably lower than at the present time and we have since added quite a few improvements that would ordinarily increase the price of this house considerably, but on account of the large amount of advertising the design has been given, the large number of orders received for it, we have only increased the price to \$698.00.

No. 6 has been purchased by customers from all sections of the U. S. to which it can be shipped profitably and has given universal satisfaction. On the opposite page we give you a general description and also the necessary floor plans.

**READ CAREFULLY OUR FREE PLAN OFFER, ALSO OUR MATERIAL SPECIFICATIONS
AS OUTLINED ON THE PRECEDING PAGES OF THIS BOOK.**

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

HOUSE DESIGN No. 6—Cont'd

HOUSE Design No. 6 is an ideal house for a corner lot but with its excellent lay-out it is equally desirable regardless whether it is placed on a corner or not. The plan in general is laid out with a view to beauty, economy and utility.

You enter the reception hall which is well lighted and embellished with a handsome stairway to the second floor. A large cased opening to this room from the parlor is another beautiful feature and entering the parlor we have two bay windows, not generally obtained without considerable expense. From the parlor we pass through another cased opening into the dining room. This is the most attractive room, the wall space being unbroken and lighted by a double window which gives ample light. In addition, we have placed a handsome casement sash in the rear wall, glazed with leaded crystal sheet glass, which adds much to the general beauty of the interior. The dining room is connected conveniently with the kitchen and pantry. From the pantry we have a stairway to the basement and from the kitchen an exit to the rear porch. This entire lower floor is laid out to save the house-keeper many useless steps, which are generally necessary in homes built on poorly worked out plans.

From the main stairway in the reception hall, we get up-stairs landing in a hallway from which direct access can be had to the three bed rooms and small room at the rear which may be arranged for either bed room or bath room. The entire house is exceptionally well lighted and ventilated. The two main bed rooms have large closets and if additional closet space is needed it is an easy matter to place one in the bath room and one in the small front chamber.

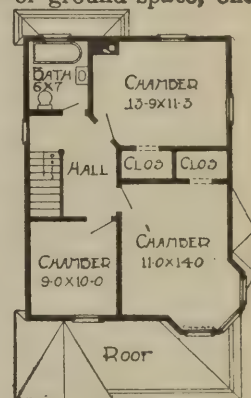

This design affords an opportunity of heating with either hot water, steam or stove heat in the most economical and convenient manner. The arrangement of rooms and exposure is a matter which should be carefully considered. House No. 6 has been built in the city, suburb and country hundreds of times, being arranged for the various conveniences at hand at the respective locations.

The exterior of this house presents an exceptionally pleasing and beautiful appearance to the eye. It will decorate any location and fit in with any surrounding. If built in the city, it will be found most agreeable as a city home and when built in the country, with all the beauty of natural scenery, landscape and plenty of ground space, one can easily appreciate its beautiful appearance. Our plans for this house, like all our other houses, are very complete and with the aid of our material list, which shows what we propose to furnish for every item going into its construction, giving our catalog number and detail, anyone can see at a glance the excellent quality of material we furnish and when our plans are used, together with our specifications and material list, an ordinary carpenter will understand them perfectly and will be able to pursue the construction of this house to completion in a most satisfactory manner.

DESIGN NO. 6 ENLARGED

We can furnish this house 2 feet wider and 2 feet longer, and $1\frac{1}{2}$ feet higher, increasing size of living room to 12 ft. x 12 ft. 6 ins., and dining room will be 12 ft. x 15 ft. 6 ins., and kitchen 10 ft. x 10 ft. 8 ins. Also give you a larger reception hall and pantry. If you prefer this enlarged size do not mention No. 6, but order No. 16 instead.

Price of No. 16..... **\$798.00**

SECOND FLOOR

Don't forget that this house can be equipped most economically with either hot air, hot water or steam heating plants and also plumbing outfit. We are pleased to quote the following special low prices on the material necessary.

8 ROOMS AND BATH

THIS house is one of the most popular designs ever built. It pleases a large number of people and is a design that can be most economically constructed. It has eight rooms and bath, with pantry, vestibule entrance and large hall; the hall communicating directly with kitchen, parlor and dining room. Note carefully the four good-sized, well-ventilated bed rooms with bath on the second floor conveniently placed, and the large closets with which all the bedrooms are provided.

It is an ideal house in many respects. Just the thing for a medium-sized family and well suited for country, town or city. This house has been built very often and is extremely popular with the class of people who desire comfort, neatness of design and a generally well laid out house.

This house is susceptible to many changes as regards interior arrangement; frequently with little or no additional cost, and these we will be pleased to figure with customers any time as outlined in our free plan offer.

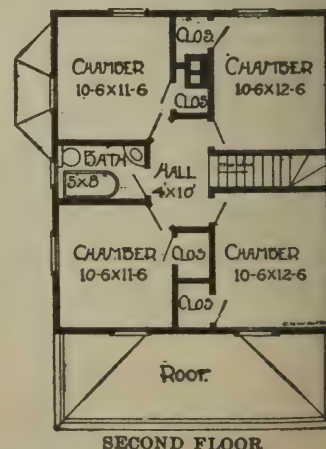

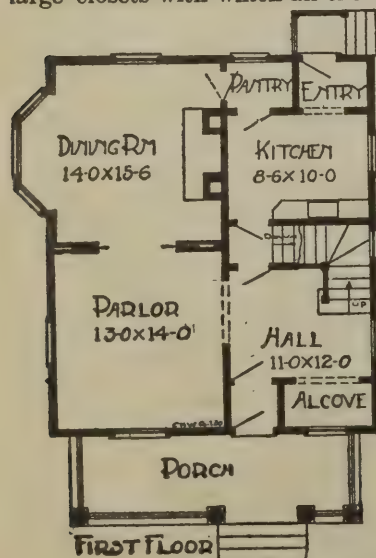

It is well to remember that the material we furnish for our designs is brand new stock, interior finish is clear, of the best grade. Full information with reference to this is given under the head of "Material Specifications," and anyone who contemplates building this house will do well to take advantage of our Free Plan offer as outlined therein, thus getting information of great value.

8 ROOMS AND BATH

IN the above we present a design that in roominess, comfort and convenience will meet the requirements of the most exacting. In size it is 30 ft. wide by 30 ft. long, exclusive of the porch. The swell front or bay windows, the handsome dormer and the massive colonial porch give the exterior an exceedingly pleasing and substantial effect. The interior arrangements have been developed to meet the requirements of a modern home. The pantry is placed between the kitchen and dining room, thus saving many unnecessary steps. The stairway to the basement is directly under the front stairway and entry to the kitchen may be made through the front hall without passing through the other rooms. The chimney is so placed as to make heating the house the most economical possible, either by stoves, hot water, furnace or steam heat. The large cased openings between the dining room, living room and hall lend additional roominess to the interior and set off admirably the handsome stairway leading to the second floor. We call special attention to the fact that ascent to the second floor can be made from either front hall or the kitchen in the rear, which is an added convenience generally appreciated.

The landing of the stairway on the second floor is directly in the center of the house with direct entrance to each of the four bedrooms and bath, ensuring complete privacy to its occupants.

It is one of our leading and most popular designs and we are supplying the material necessary for its construction in extra good quality therein.

In this book you will find further information regarding the quality of material, under the head of "Material Specifications," and our Free Plan Proposition is also fully described. If you are interested in this or any of our designs and are looking for a real bargain write us fully.

3 ROOMS AND BATH

IN the above we illustrate a strictly modern home of moderate size. It is 28 ft. wide x 28 ft. deep with a 7 foot wide porch, extending nearly across the entire front. The large Colonial windows give the house a strikingly distinctive effect often lacking in dwellings of double its cost. The interior has been arranged with a view to comfort and health of its occupants. The windows are many and large, and placed to insure ample light and perfect ventilation. The cellar stairs are directly under the main stairway and with-in easy access of the kitchen. The pantry communicates directly with both kitchen and dining room; a convenience that will save many steps during the preparation of meals. There is, besides, an extra closet opening from the kitchen that is universally appreciated. The general comfort and roominess of the house is further enhanced by the large cased opening connecting the dining room, living room and hall. Nor has the artistic been neglected. The triple casement window on the stair landing is glazed with leaded crystal glass and provides not only ample light and ventilation but gives the stairway a pleasing artistic effect, and the leaded glass window in the "den" also adds much to the general attractiveness.

The second floor has four good size bedrooms, bath and four closets. All the rooms are well lighted and ventilated and open directly into the hall, insuring complete privacy to the occupant.

The entire material for this house is of exceptionally good quality and in keeping with the character of the design. It is our constant

aim to eliminate waste at every angle, and in drawing the plans and developing the designs we avoid impractical and expensive construction and in making up our bills of material, we utilize standard sizes and grades and so avoid unnecessary expense which always follows impractical and unusual construction. This design, especially, is susceptible to a full development along these lines. As a result we are enabled to offer the material necessary for its construction at a price impossible to others and so make it possible for people in moderate circumstances to secure a beautiful and commodious home at a very low price.

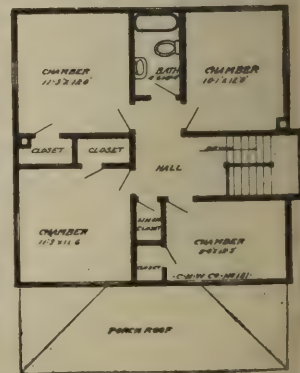

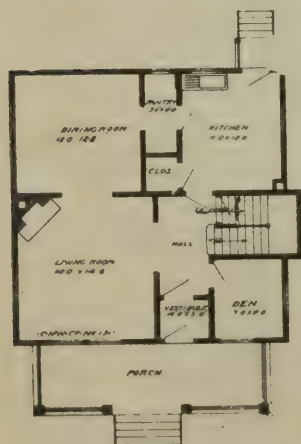

All of the material for these House Designs is strictly Brand New stock of standard manufacture and we guarantee the grades specified in our Bill of Material. With the aid of our complete Blue Print plans and Specifications and our itemized List of Material anyone at all familiar with building construction will have no difficulty in constructing this dwelling. We outline on the preceding page of this book our Free Plan Proposition which you are earnestly requested to read.

7 ROOMS AND BATH

In our Design No. 133, 24 ft. by 29 ft. 6 in. in size, we present a combination of country and city home. The distinguishing feature of this design is the large veranda extending across the front and along the side of the house. This feature appeals strongly to those who are fond of out-door life. In interior arrangements, this design has all the comforts of a modern home. Our chief aim has been to utilize every inch of available space to the best possible advantage, without unduly increasing the cost, and we believe we have succeeded. Though the house is of moderate size, the rooms are all comfortably large. There is no waste of room where not needed.

The main stairway is modern in design and construction and adds much to the general attractiveness of the interior. The large cased openings connecting the hall, living room and dining room, lend additional roominess to the already comfortable dimensions. The pantry is so placed as to be easy of access from both the kitchen and dining room. There are three chambers on the second floor, each provided with a closet, and opening directly into the center hall, with a linen closet also opening from the latter. The hall is lighted by a large window on the stairs and may be readily ventilated. There are no dark corners anywhere. The windows are large and placed to insure perfect light and ventilation and yet leave plenty of space for furniture.

Although our "Material Specifications" outline fully the general class of material that we furnish on all of our designs, the material list covering the above design will show exceptionally good qualities, in every way suitable and desirable for a first class job and will be an agreeable surprise for intending purchasers.

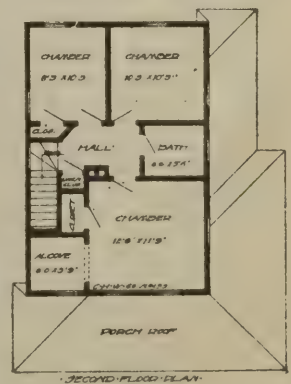

Our Free Plan Offer in the preceding pages describes fully how you can secure a set of plans, specifications and list of material Free of Charge. It will be well to read this interesting offer carefully.

SIZE 22 Ft. x 40 Ft.

PRICE F. O. B. CARS CHICAGO **\$817.00**
Write for Actual Delivered Price.

7 ROOMS, BATH AND
RECEPTION HALL.

OUR design No. 170 is a full two-story residence with seven large rooms, reception hall and bath, fine porches and balcony, and can be built at a very low cost, every inch of available space being utilized to the best advantage. This kind of a house is suitable either for country or city and would attract attention anywhere. It will most strongly appeal to those who demand something a little more pretentious in outside looks. Just a few extra touches are given; the handsome art window in the gable, the outward bend at the belt line and the railed-in balcony add greatly to the appearance with very little more cost.

To any one who is at all in favor of a plan similar to the plan of this house, the interior arrangement will please at once. There is the living room and dining room separated only by a large cased opening, thus enabling these two rooms to be thrown practically into one. This does away with the necessity of a large living room, giving you practically the same advantage. No better plan has yet been devised to make the moderate priced home attractive and yet provide for the proper entertainment of visitors. The feminine fancy also

will be taken by the large kitchen, handy pantry and rear porch.

Also, if a bathroom is desired on the first floor, it would be an easy matter to enlarge the pantry and closet somewhat making a bathroom out of this space; making the entrance to the kitchen on the side and using what is now the kitchen porch for the pantry. For a change of this kind the extra cost would not amount to over twenty or twenty-five dollars.

A point which may escape your notice and to which we especially call your attention is that with very little change in the plan, this house can easily be converted into a two-family residence. In almost any locality you could secure a desirable tenant willing to pay a good rental for the upper floor, reserving the better part of the house for your own use. In many cases the rent can be made to pay the interest on the investment, taxes, insurance and keep up all necessary repairs.

In Cincinnati, Ohio, there are thousands of houses built on this plan, and many a home fortunately has been built and paid for in this manner.

The material we propose to furnish is fully described in our Material List sent with the Plans. The General Specifications in the introductory pages of this book will give you a fair idea of the grade of material generally used. We are confident that the price at which we are placing the material for this Design on the market cannot be touched by competitors, quality, of course, considered.

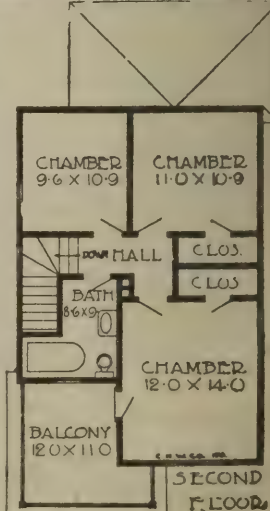

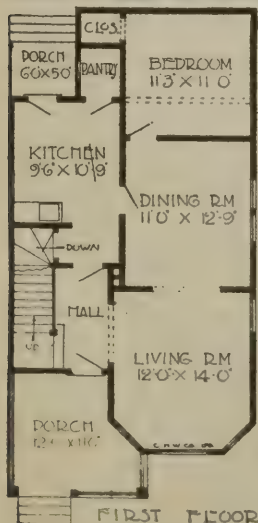

Particular attention is called to the excellent lay-out of the second floor. All the rooms are handy and convenient to the bathroom. The two main bedrooms have exceptionally large closets. Also there is a door leading to the second floor balcony.

8 ROOMS AND BATH

IN this design we have an eight-room house, 25 feet wide by 33 feet deep. This design is drawn on correct lines and its heavy front porch and bungalow style of roof gives it a decidedly distinctive and exclusive effect. The first story is finished with beveled siding with the second story shingled, but this may be changed in any way to suit individual taste. While we bill this house out regularly without any attic material, the joists are heavy enough so that if it is desired to finish up a few rooms in the attic, all that will be required is the flooring and extra studding for that purpose. We call especial attention to the bay windows on the first floor, giving abundance of light and perfect ventilation for the entire interior. The pantry has direct entrance to both kitchen and dining room, and the entrance to the basement stairs is also through the pantry. The large cased openings between dining room, living room and hall gives a clear view to the handsome stairway leading to the second floor. Landing on the second floor is practically in the center of the house so that no room is wasted with long halls or dark corners. Every room has direct entrance to the hall and there is the further advantage of connecting bedrooms which is very desirable in some cases.

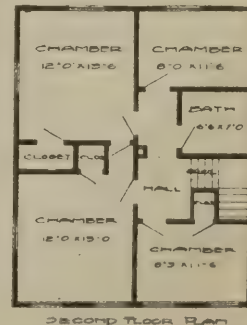

The material we are furnishing for this design, as for all others, is described in general detail under the head of "Material Specifications" to which we call your special attention. We would also like to have you read our Free Plan Proposition as outlined, and urge you to take advantage of this most liberal offer. Our material list furnished with our plans describes fully what we furnish and this list in connection with our catalogue gives complete information of what goes into our designs.

7 ROOMS AND BATH

WE have here a design of house on the bungalow type, having reception hall, living room, dining room, kitchen and pantry on the first floor, with three ample sized chambers and alcove chamber as well as bath and spacious closet on the second floor.

Front entrance is made directly into the reception hall, having direct passage through the house to kitchen. Immediately adjoining the reception hall, we have the living room, separated only by a cased opening; thus the two compartments are practically both thrown into one large living room.

The stairway is an open stairway to landing, and in this exceptionally neat arrangement, we have designed a seat immediately below the staircase, conforming to the general outline of this design. Dining room is arranged with seat in the bay, having three French leaded glass sash above; also leaded glass window on side so as to give a beautiful interior effect.

The stairs land on the second floor, practically in the center of the house, making access to all rooms and bath convenient and close at hand.

All the material for this unusually neat house is of the best quality and all interior finish and floors clear stock. We can furnish a Colonnade to fit in the cased opening between the hall and living room if desired at a small additional cost.

The design is also well arranged as regards plumbing and heating fixtures, and all in all, we have made a careful study to place this house on the market as something entirely new and out of the ordinary and have it appeal to persons of good taste, who wish to build economically and get the very best possible results.

The exterior of the design is strictly classic, made to conform to the "Old English" style of architecture in every particular, having shutters for all windows in front and side lights on the door.

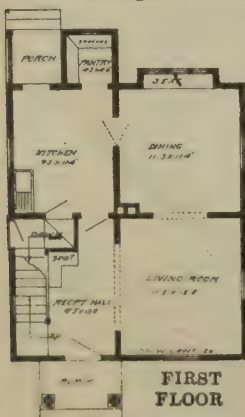

Our bill of material will call for shingles for this particular design. However, we can also furnish it with the upper half in shingles and the lower half in siding, or vice versa at the same prices.

6 ROOMS.

HERE we illustrate an ideal town or farm house that for convenience, compactness, economy in cost of construction and in cost of material cannot be equalled, when you figure that we propose to furnish you all the material necessary to build this Design from the ground up, except the paint, masonry material, plumbing and heating systems, for \$533.00. Kindly stop and think a moment. Here is a big one and one-half story house, containing six rooms, conveniently arranged, all of good size and of good material. The first floor ceiling is 8 ft. 6 in. in the clear. The second floor is 8 ft., there being a cut-off on account of the sloping roof. The studs, however, are 14 feet, and the height of the first floor ceiling could be raised if desired and still give a first-class second floor lay-out.

We invite a comparison of the material we furnish for this Design with an estimate on a similar Design, furnished by any one at any price. We are confident that our price, quality of material considered, will be by far the lowest. A careful study has been made of the use of the material and there is practically no waste whatever in the cutting—this means economy.

The first floor you will note has a parlor, large kitchen, amply big enough to be used for a dining room and kitchen. A good-sized bedroom containing a large closet connects with the kitchen. There is a very inviting porch around the entire front and side of the house, back to the kitchen with an entrance there.

The up stairs plan of this house shows three good sized bedrooms, each containing a spacious closet, and all entrances located convenient to the stair-hall, which means a saving of many steps, as well as a saving in material and space.

The material we furnish for this Design is in thorough keeping with it, the entire interior being absolutely Clear "Georgia" or "Yellow Pine" stock, including trim and floors. The Blue Prints will show an excellent design of stairway, including the newell post, rail and baluster, as well as the latest style cross panel doors and modern trim throughout.

We furnish box sheathing, building paper, bevel siding, as well as double flooring for the first floor; also Extra Star A Star Washington Red Cedar shingles for the roof. The porch material is first class and clear stock. From this you will note that no point has been overlooked. A study of the Plan will convince you that this is the Design for you to build, provided the floor plans meet with your approval.

Although a bathroom is not shown on the plan, same can be provided for very nicely by cutting out the two large closets now dividing the two rear bedrooms, placing the closets at the front walls of these bedrooms, and locating the bathroom at the point where the two closets are now shown.

The height of this house may also be increased at a slight extra cost. If you will write us regarding same, we will be glad to quote you promptly.

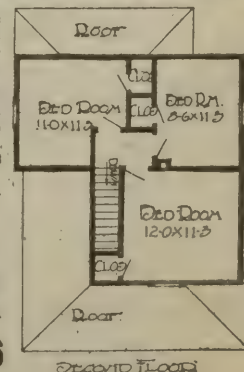

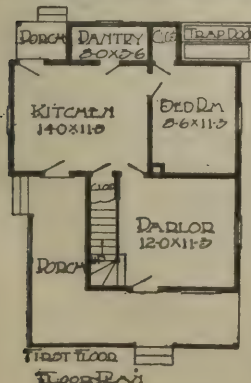

If you have any vacant property and wish to improve it, this design is our recommendation for maximum amount of returns on a minimum amount of expenditure.

8 ROOMS AND BATH.

A GREAT many square houses are built now-a-days; so many of the same old cut and dried pattern that one gets weary of seeing them. Here is something different. Omitting none of the practical advantages of this type of construction, our designers have been able to get away from the deadly monotony and by a few simple, inexpensive changes have evolved a home of very pleasing appearance which cannot fail to attract attention wherever located.

The desirability of this arrangement is too well known to require extended description. We more especially wish to bring to your notice the distinctive features of our special design. The picture above will give a very good idea of how this house will look when built. In the first place the eave cornice is a departure from the ordinary box cornice, being of the style known as rafter finish because of the exposed rafters. Stained shingles cover the outside walls for about one-third of the distance down, then comes a belt course, with plain weatherboarding the rest of the way.

All the comforts and conveniences of a well-ordered home are found here. Don't let the fact escape you that the porch extends clear across the front of the house. On the lower floor we have reception room, parlor, dining room and kitchen. The dining room is at the rear with double windows looking out two directions. If the view at the rear is not to your liking you easily could make a change and put in single sash higher up, say about three in a row. There are four bed rooms up stairs and a large bathroom. The bed rooms are all of good size and arranged without waste of space, all opening convenient to the bathroom and hallway. Each room is well supplied with closet space.

There is an outside door at the grade line giving easy access to the basement. The front porch has a box cornice and is celled over-head; handsome colonial columns with Ionic capitals break the plainness. The leaded art windows aid also to make the home attractive.

This house can be built according to our plans and specifications at a cost so low as to be scarcely believable. Our bill of material calls for everything of excellent quality of their respective kinds and grades. Washington red cedar shingles are specified for the roof and sides. You have your choice of a number of different kinds of weatherboarding. For the interior we figure selected clear "Georgia" or "Yellow Pine" trim; modern well made five cross panel doors with Yellow Pine panels; and White Pine style and rails, thus giving a door that will hang true and remain so, windows glazed with clear quality glass; everything as good as it should be.

This design is arranged for heating and plumbing in a most economical manner. Let us send you the complete set of plans and specifications. Read our Free Plan Offer, explained in the first pages of this book.

7 ROOMS AND BATH.

DESIGN No. 62 has the appearance of a much larger house judging by the front Elevation, with its double glass doors, flanked on both sides by a pair of Casement Sash. In size it is 22 ft. wide by 33 ft. 6 in. long, exclusive of porches. An uncommon feature not usually attempted in houses of this class and size is the large private front porch which is 7 ft. deep and 18 ft. long. It is called private because access thereto is obtained only from the inside, through the Living Room. The actual Entrance to this house is on the side, which side is shown in the picture. This entrance opens into the Reception Hall, which is situated between and divided from the Living Room and Dining Room by large cased openings. Here also is the Stairway which is so designed as to be easy of construction and ascent.

Notice also that directly under the main stairs are the steps to the basement, entrance to which is effected through the Pantry, on the same order as in some of our other House Designs, which have proven popular, but in practically all other respects this house is entirely different, especially the balance of interior layout, which is unique in its arrangement.

The size of Living Room is 21 ft. x 13 ft., Dining Room is 11 ft. 3 in. x 13 ft., and Kitchen 9 ft. 3 in. x 10 ft. The centrally located Fireplace in Living Room will distribute the heat to the best possible advantage. Note also the roomy pantry and extra closet off the Kitchen, which serves also to hide the chimney.

The Kitchen and Dining Room being directly opposite one another, without Pantry or Passage intervening and connected by a swinging door is a step-saving arrangement. There is a door from the Kitchen opening into the Passage leading to the Reception Hall, avoiding a roundabout way to the rooms up stairs. Without question this house represents a wonderful value.

There are four Bedrooms on the second floor, with Bathroom. All of the Bedrooms are of ample size and each is provided with a Closet. Like in practically all our Designs the Bathroom is very conveniently located, within immediate reach of all other rooms which all open separately into the Hall, entirely independent from one another. Three of the Chambers are each provided with two windows of good size, and the other one has an extra large window, so the matter of lighting and ventilating is properly taken care of. Note also the fancy windows in the front, a very attractive feature.

Owing to the increasing popularity of combined cement plaster and shingle construction, we have followed this style on this medium sized low priced house. The plaster reaches to the second story windows. The Porch walls also are built up in the same way. The upper part of the house, as will be noticed, is shingled.

Our Material List contains a complete description of all the Lumber, Millwork and Hardware we furnish for this design. See the front pages of this book for further information as to our Free Plan Proposition and about reversing the Plans of any of our houses.

8 ROOMS AND BATH

WE show herewith a square house without bays, angles or unusual projections which gives one the opportunity to use all space to the best possible advantage and under ordinary conditions should be built very economically. Size is 28 ft. square or increased to 28 ft. x 40 ft., if porches are added. Reception Room is 10 ft. 9 in. x 12 ft. 6 in., large enough to be used as a regular sitting room, and it occupies a prominent position. The other main rooms down-stairs are roomy and comfortable, the dining room especially so, being 13 ft. 3 in. x 14 ft., living room is also 13 ft. 3 in. x 14 ft. and the kitchen 9 ft. 3 in. x 12 ft. 6 in. Wide cased openings connect reception room with dining room and living room. The living room can be enlarged from either way by omitting the partitions. Another arch opening divides reception hall from the stair hall and a door connects stair hall and kitchen. The two doors in dining room also communicate directly with kitchen and hall.

Note the grade entrance on the side of the house with the steps leading up to the kitchen and down to the basement. Location of chimney simplifies the heating problem whether stove heat or any other arrangement of heating apparatus.

The four bedrooms upstairs supply sufficient sleeping room for an average sized family, each room is provided with a good size closet and all door openings are conveniently located to bath room. Also note the airing balcony which with the use of an awning may be used for outdoor sleeping purposes. Another item of economy which marks this house as a desirable investment, if you already have a home, is the absence of large and fancy windows, yet a goodly number of them provide ample light and ventilation.

The outside appearance of this house with its hip roof, the panel effect as shown in the gable dormer and porch gable makes it a desirable one to own. The roomy porch especially improves the looks considerably with its colonial turned columns and composition caps; the columns rest on brick piers with stone caps. Like some of our other popular designs, siding is used up to the sill course in line with the lower part of second story windows and from there on, house is shingled.

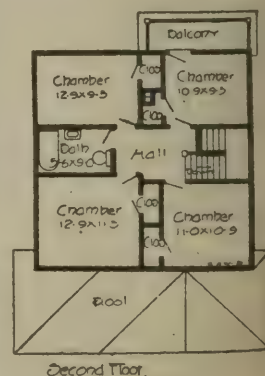

On pages under "General Material Specifications" we specify clear yellow pine stock for interior finish such as casing, flooring, base, and other interior mouldings, which explain also about the hardware we furnish. Of course all stock is brand new material.

8 ROOMS AND BATH

THIS house is 29 ft. 6 in. by 32 ft. It has been designed to meet the special requirements of those who from choice or the necessities of their situation want all the conveniences on the main floor of the house, yet prefer a two-story house to the one-story cottage. The house has many attractive and artistic features, though it is not always possible for the designer to bring out the salient lines under the restrictions imposed by the space available for its reproduction in a catalog of this size. The harmonious effects would be better appreciated from an inspection of the scale drawings. To that special class who demand the conveniences as here arranged, this house offers many advantages.

We have on the ground floor, three good sized living rooms, bedroom and bath room. The stairway leading from the living room is of the open order and access to the basement may be had directly underneath it, thus economizing the available space. On the second floor are four good sized bedrooms, each provided with a closet. The house is well lighted and perfectly ventilated and is in every respect a comfortable and convenient home. The interior arrangements may be altered to meet special requirements.

The porch is exceptionally large and desirable, extending on the left side beyond the front of the house proper and giving it an imposing, artistic, as well as unusually massive appearance.

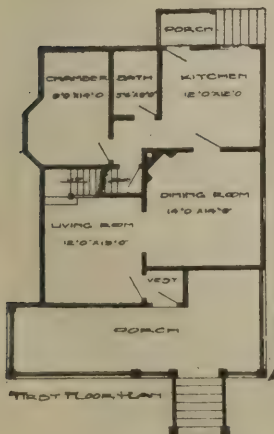

Kindly read our Free Plan Proposition as outlined, and for a description of our materials, you are earnestly requested to carefully read our Material Specifications section in preceding pages. "You will profit by so doing."

6 ROOMS AND BATH.

IN our design No. 41 we show a small two-story house of six rooms and bath. Though only 18 feet wide and 34 ft. deep, it has three good-sized rooms and pantry on the first floor, and three bedrooms and bath of comfortable dimensions on the second floor. This house was designed for a small city lot where space is valuable, enabling people of modest means to secure a home of their own at a very moderate cost.

While a building of this size is not susceptible to elaborate decoration in external treatment, this design is not lacking in a certain attractive simplicity that harmonizes well with its general outline. The lower part is finished in Beveled Siding of the same quality as for our higher priced designs, while the upper portion above the belt-course and front porch is finished with Red Cedar shingles. These shingles should be stained in Creosote Shingle Stain of the desired color before they are applied, as this will not only improve the appearance of the building, but will preserve the shingles as well.

The interior arrangement of this design has every convenience possible to the size. It is extremely well lighted and ventilated, and the location of the bath room makes the installation of plumbing fixtures comparatively easy, while the chimney is so placed that the entire lower floor may be heated by one stove in the dining room, or the whole house may be heated by a small furnace in the basement.

The material we supply regularly for this design, as for all our others, is first-class stock. A more complete description will be found under our material specifications on another page, and in the lists supplied with our blue print plans in connection with our Free Plan Offer as already outlined.

It is important that you read our Free Plan Offer given in the introductory pages of this book from beginning to end. It will give you a clear understanding.

HOUSE DESIGN No. 72

SIZE 27 FT. X 36 FT.
Inclusive of Bays

PRICE F.O.B. CARS CHICAGO **\$810⁰⁰**
Write for Actual Delivered Price

7 ROOMS, BATH AND
RECEPTION

THE MAIN feature about this well-designed cottage, from an external point of view, is its striking roof, gable and bay window construction, presenting an admirable picture, especially when looking at the front elevation, with its divided second-story triple window and circle sash in gable. The front porch especially attracts one's attention, with its pedestal columns and square balustrade.

This house has three bays—one in the dining room, another in the down-stairs bedroom and the third in the front bedroom upstairs. The bay in second floor has three windows; the other two, on the first floor, have windows in the angles only. This, however, affords ample light and gives one the advantage to use the center wall space for China Closet, Mantel or Sideboard purposes, or a regular cottage window may be put in if desired, at some extra cost, depending upon the size and style selected. Prices for changes of this nature, and for any other changes, will be furnished promptly upon application.

Size is 22 ft. wide x 36 ft. deep, or 27 ft. wide across the bays and 43 ft. long, inclusive of porch. Lower floor is divided into four main rooms, consisting of living room, dining room, bedroom and kitchen, besides the reception hall, pantry and two closets. Living room is 12 ft. 3 in. x 12 ft. 9 in.; dining room is 12 ft. x 14 ft. 6 in.; bedroom is 11 ft. x 12 ft.; kitchen 9 ft. 3 in. x 10 ft., and pantry is 4 ft. by 4 ft. 6 in. Many people prefer to have a bedroom on the lower floor and have it directly adjoining another room, as shown in this house, without any hall or passage in between. The roomy closet thereto will be appreciated by many.

Immediately upon entering the reception hall, through the modern front door, your eye greets the semi-mission style stair case, which is designed to permit of easy ascent. A large cased opening divides the hall from the living room, and the hall door excludes the dining room from the front view. A similar door divides dining room and kitchen, and instead of having rear door in its usual place it opens off the side of the house onto the rear porch.

The three bedrooms upstairs are nice and roomy, especially the front bedroom, which has square walls (no slope to ceiling) and is 10 ft. 9 in. x 15 ft., inclusive of bay, and obtains its light and ventilation from the three windows in this bay. The rear bedroom also has square walls, is 9 ft. 9 in. x 12 ft., and has a double window. An unusual amount of closet space on the second floor, very short hall, extra good location of bathroom fixtures marks this design as entirely distinctive.

This house is finished with beveled siding from foundation up, except the front gable, which is shingled. We want to call your special attention to the fact that the studding run about 2 feet below the first-floor joists, permitting of very low cost foundation construction.

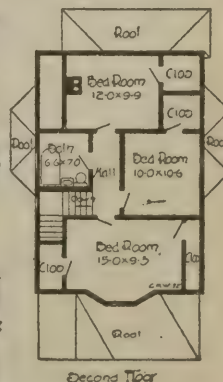

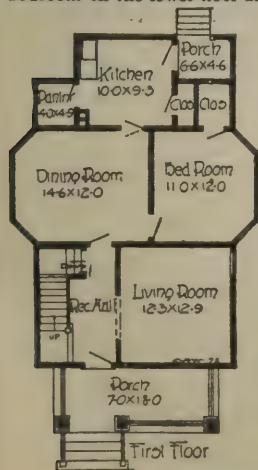

Do not overlook the fact that all the material we specify is brand new and strictly first-class, for the grade in every respect. Study the **introductory pages** of this book carefully. It tells how you can obtain valuable **blueprints free** of charge, and explains fully our entire proposition.

8 ROOMS AND BATH

THE design shown herewith is a modern house, of liberal dimensions and extremely handsome effect. In size it is 29 ft. wide by 33 ft. 6 in. deep, exclusive of porch, and it has every convenience and all the requirements of an up-to-date home. As already stated in our introduction, these houses are not picture houses but practical in every respect, and have been designed from suggestions, in many cases made by our customers or developed from many years of experience in actual construction. In presenting this design, we have sought to harmonize every feature. The front gable, the dormers, the wide porch, the bay windows, all lend to the general beauty of the house, while in the interior, it is as perfect as human ingenuity can make it. In the parlor we have a handsome fire-place flanked on either side by leaded glazed windows. The beautiful bay window in the dining room gives not only ample light and perfect ventilation but an extremely pleasing effect which is further enhanced by the leaded glass window in the rear of the room. The kitchen is large and well lighted and entry to the commodious pantry is affected through either the dining room or kitchen. We have besides a small room entering into the kitchen intended for a wash room or lavatory. On the second floor we have four good sized bedrooms, bath room and plenty of closets. Altogether, this house offers anyone wishing a modern, up-to-date roomy home, every advantage and convenience of a house of much higher cost.

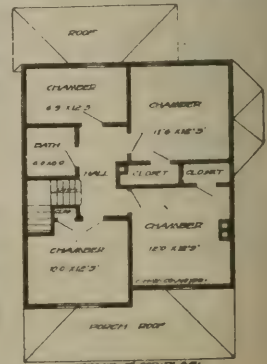

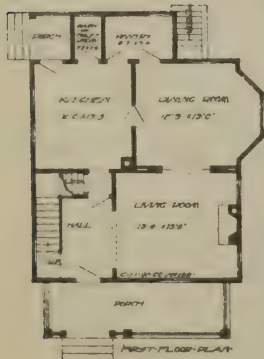

The materials we furnish for this design are all extra good qualities and are described generally in this book under the head of "Material Specifications." We also ask you to read our Free Plan Proposition by which you can get full and complete information regarding any of our designs.

9 ROOMS AND BATH

IN the above we show a design that is 30 ft. wide by 30 ft. deep, and it is especially designed to meet the requirements of that class of people who do not wish to be crowded for room in their homes. The massive porch on the front and the wide projecting eaves as well as the handsome dormer in the roof give the external appearance a certain attractiveness that is not always possible to obtain in houses of this size. Front door opens directly into the center hall which communicates by cased openings with rooms on either side. These cased openings may be enlarged to suit individual tastes so that the entire front of the house may be thrown into one large room. This arrangement is in great demand at the present time and offers greater advantages for domestic enjoyment than any number of smaller rooms. The wide stairway leading to the second floor lands in the hall which is lighted by a window on the stair landing. There are five good sized bedrooms and bath room on the second floor with plenty of closet space. Altogether, this house is not only roomy and comfortable but modern in every respect. The interior arrangement may be altered to meet individual requirements without increasing its cost, and to those who like comfortable dimensions and modern conveniences, this design offers many advantages.

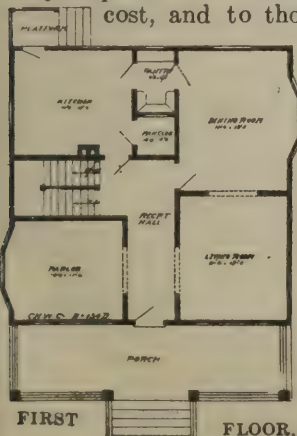

The material we furnish for the construction of this house is strictly Brand New stock and of exceptionally good quality. We invite your attention to the detailed explanation in the preceding pages of this book for further information along these lines. We furnish Free Plans, specifications and list of material with each of our designs.

9 ROOMS AND BATH.

SUBSTANTIAL looking, of handsome appearance and modern in every respect our Design No. 56, which we take great pleasure in offering for your approval. This special design, published now for the first time, is destined to take rank with our leading sellers. What probably impresses most in considering our proposition is the amazingly low figure of our estimate on material. One naturally would class this house with the more expensive residences. Our ability to purchase unlimited amounts and our policy of taking advantage of every big deal offered puts us in a position whereby we can at all times protect our customers against extortionate prices and give them besides the benefit of our unquestioned buying power. Again we emphasize this point—which must not be overlooked—the material furnished for this design is strictly first-class for the grades specified and guaranteed equal to the best of its kind the market affords.

Do you want a complete home—plenty of room—comfort—all the conveniences? Here it is. There are many special features which we shall mention briefly. The big front porch, beautified by chaste pillars with ornamental capitals, the railed balcony, the full two story bay projection, and the dormer in the roof, assist in giving character to the outside of the house. The reception room is unusual in that it is extra well lighted, being enlivened by an artistic bay of leaded art windows in addition to the large door and window at the

front. The plans provide for a window seat to follow around the angles of the bay. The main stair, partly open, partly closed, winds up out of this room. Large cased openings connect the three front rooms. The parlor is a cheerful room with a large bay window in front and another window at the side. The principal feature of the dining room is the triple art window.

Note the private passage to the rear of the house through the reception hall. The kitchen has a small back porch and good-sized pantry. There will be a china cupboard at one corner of the kitchen just opposite the entrance to the dining room, the convenience of which will be appreciated by those with domestic duties to perform. The small bedroom off the kitchen will come in handy should you require the services of a maid or would answer equally well for other purposes.

Here is a point that may interest you should you happen to be so situated. Renting rooms in some localities is extremely profitable and oftentimes gives the housewife a permanent income with very little outlay. If you wished you could let out a couple or maybe three of those upstairs chambers. They certainly would attract desirable roomers as they are much above the average.

Being square and compact this building can be economically heated. Our estimates on Heating Plant and Plumbing Outfit, given below, will interest you.

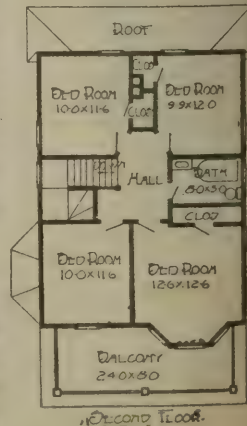

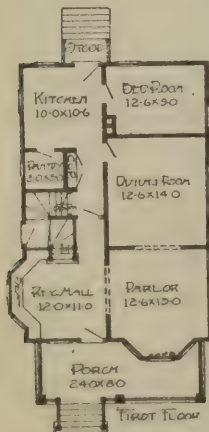

We furnish complete set of Plans, Blue Prints, Specifications and all necessary information relative to the construction of this design. Read our Free Plan Offer, fully outlined in the introductory pages of this book.

6 ROOMS AND BATH

THIS house is 29 ft. 6 in. wide by 34 ft. 6 in. deep, exclusive of porches. There are four exceptionally large rooms, besides pantry and closet on the first floor and two chambers and bath on the second floor. The back portion of the house is but one story high, thus saving considerable in the cost of the construction. This house has been designed for people who prefer a limited number of large rooms to a greater number of smaller rooms and its compact arrangement makes it especially economical in cost of construction. This is an exceptionally good farm or country house, where large rooms without waste space are desired.

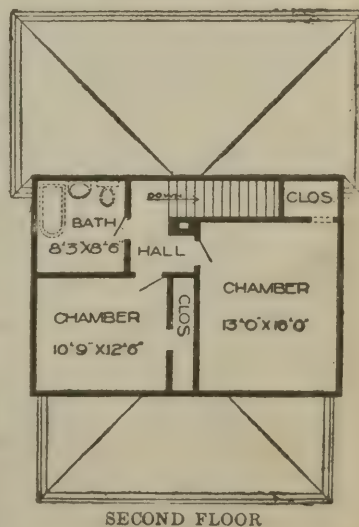

The interior arrangements may be altered to suit individual requirements without increasing the cost. In place of the parlor on the ground floor a reception hall may be provided with an open stairway leading from first to second floors. In that event an extra room could be provided on the second floor. We shall be pleased to make any changes suggested.

The materials we furnish for the construction of this as for all of our designs is strictly Brand New stock as described in our introductory pages. We believe that for the amount of space provided, this house may be built cheaper than many other designs.

**7 ROOMS, BATH AND
RECEPTION.**

HERE we present one of those pretty Colonial Designs of medium size, 35' wide by 32 ft. deep. The colonial effect has been carried out faithfully as shown by the windows and columns, also the front entrance with the large single glass door and side light sash divided into small lights by wood bars. The combined hip and gable roof of the large porch adds to the general colonial scheme.

The combination siding and shingle construction carried out successfully in this design adds much to its beauty, although if siding for the entire house is used the effect will be very pleasing as well.

Entering through the colonial front entrance into the vestibule which opens into the reception hall you see the well designed half-open stairway. You enter the dining room through a wide cased opening and a pair of sliding doors divides the hall from the living room as well as from all the rest of the rooms. The living room is exceptionally large, taking up the entire side of the house. Its size is 13 ft. x 24 ft. 6 in. Note how the mantel suggestion improves and enlivens the appearance of this room. The dining room is 13 ft. 6 in. x 15 ft. inclusive of bay. It is flooded with light at all times containing besides the three windows in the bay a triple window in the front corresponding with the triple window in the living room. The kitchen is 10 ft. 6 in. x 13 ft.

Extra time and thought has been expended to place as much convenience in the kitchen part of the house as possible consistent with the space available. The pantry being located directly between the sink and the place where the kitchen range will stand is certainly worthy of special consideration. Also the stair entrance to basement being off the pantry is another handy arrangement, all to save useless steps.

While this house is of medium size it will accommodate a larger than medium sized family, because the four chambers on the second floor provides ample room. If a larger main bed room is desired it can easily be provided by moving partition dividing bedroom on the left side back about 3 ft. making the bath room out of the balance, and use the bath room as now shown for a sewing room. If more bed room is needed one or two rooms may be easily finished off in the attic. On any such changes desired we shall be pleased to quote revised prices. The upper floor layout is most convenient and economical. Like the lower part of the house

plenty of light in each bedroom is obtained through the two windows in each room, taking care of the ventilating problem in nice shape.

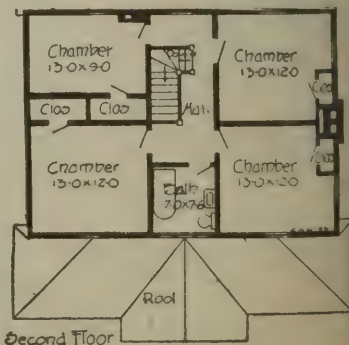

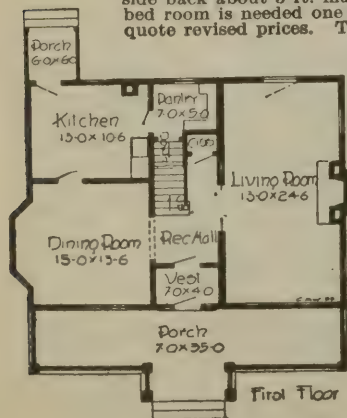

Please be sure to refer to the previous pages in this book as to the free plans we furnish accompanied by free Material List and Specifications. We also refer you to the pages in the front part of the book treating on general material specifications covering all brand new material of course, which will give you a fairly good idea of excellent kinds and grades we include for this and other designs.

7 ROOMS, BATH, AND
RECEPTION.

THERE are more exclusive features about this house than in almost any other design of similar construction and size, which is 27 ft. in width and 36 ft. in length. Adding Porch makes the length over all 44 feet. Living room is 21 ft. x 13 ft. 6 inch, nearly covering the entire width of house. Balance of the lower floor consists of Dining Room, Kitchen, large Reception Hall and Vestibule Entrance which contains a Coat Closet. Besides the roomy Pantry there is an extra Tin Closet conveniently situated. Entrance to the Basement is effected in the passage off the Kitchen directly under the Main Stairs.

The entire layout is conveniently arranged along modern lines. In fact, it is an entire new and modern design for modern people. The open Stairway adds greatly to the attractiveness of the interior. Chimneys are situated so that temporary or permanent stove heat can be used. Flanking the Mantel suggestion in the Living Room are Casement Sash placed high enough so that the space underneath may be utilized for Bookcase purposes. One of the most exclusive features of this house is the large private porch, to which access is obtained through the combination Colonial Entrance. Steps to this porch can be added, if desired, at slight extra cost.

On the second floor we have three large Bedrooms, Alcove and Bathroom. The Alcove offers choice of different arrangement. The most desirable one to some would be to use it for a private dressing room, as it has an extra large Closet. Note also, the Linen Closet in the Hall and the two windows in the Bathroom, providing perfect light and ventilation. There is an abundance of light in all the Rooms and Halls.

From an exterior point of view this house easily ranks in the foremost class. The walls of the lower part of the house up to the second floor windows are finished with cement plaster. Above that they are shingled. This combination method of construction is proving entirely practical and is rapidly gaining in popular favor. Of course, regular Siding may be substituted for both Cement and Shingles. We will be pleased to quote prices on such changes. We believe, however, that this new house as designed by our Architectural Department will prove by far the most suitable construction, retaining all the pleasing outlines of the exterior, with its Colonial Windows and Casement Sash, the square classical tapered Columns, the Pergola over the corner Entry, and the Sweeping Roof.

Particular attention is directed to the possibility of low cost foundation construction.

Careful reading of the first pages of this plan Book will convince anyone that ours is an exceptionally good offer because we give you a complete description of all the material we furnish.

Also read about our **Free Plan Proposition** on preceding pages and about reversing any of our designs.

8 ROOMS, BATH AND
RECEPTION

THIS somewhat unusual, though entirely practical design, presents a half timbered house of large dimensions. The half timbered effect is made possible by reason of its combination cement plaster and shingle construction. Is 36 ft. 6 in. wide and 32 ft. deep. Adding the porches makes it 44 ft. 6 in. by 40 ft.

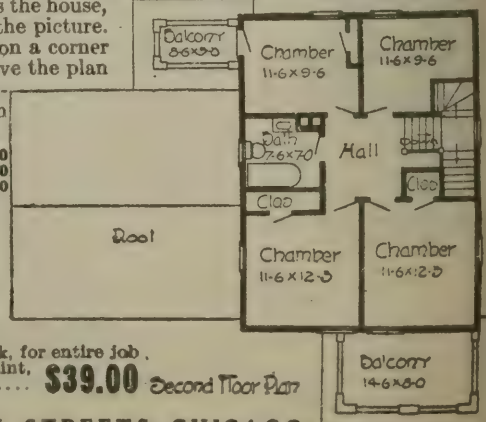

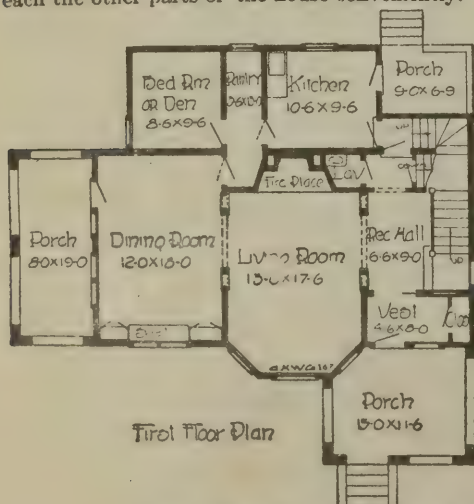

In some of our houses of more moderate design some desirable features must of necessity be omitted either for lack of room or to reduce the cost. This is not necessary here because an extra large living and dining room, 5 bed-rooms and good sized kitchen and pantry, bathroom and reception hall provide enough space to have all modern conveniences, and our price includes some extra items not usually figured in other designs unless so stated. These extras are two Colonnades; two built-in China Closets and seat; also mantel shelf for the fireplace. Among the many exclusive features are the cement veneer Posts or supports, as shown on both front and private porch; also the parapet or deck above the front porch and over the rear bed room, which may be used as an airing porch or an outdoor sleeping room during the milder months by using a canvas cover. The reception hall has a well designed modern staircase connecting with a rear stairway at the second landing, affording a separate exit to the kitchen. Another stair leads to the basement, located so as to each the other parts of the house conveniently. Note also separate lavatory at this point and handy Coat Closet in Reception Hall.

The second floor covers 24 ft. by 32 ft. and contains four bed rooms with plenty of closet space and conveniently located bathroom. This second floor space can be increased by raising the roof over the dining room section. The interior offers many possibilities of development to please the purchaser's taste and pocket book. The exterior can hardly be improved upon as the house, when built will look far better than the picture. Should you desire to build this house on a corner lot, and it should be necessary to have the plan reversed, this can be done very readily as described in our plan offer in the introductory pages of this book.

7 ROOMS AND BATH

WE present herewith a design that in size is 28 ft. wide by 28 ft. deep and is of the two-story bungalow pattern with the cement plaster coating on the outside, a method of construction that has grown into rapid favor within the last few years.

This style of construction presents many artistic and handsome features, and while it departs somewhat from conventional methods of building construction, it is thoroughly practical and has been sufficiently long in use so that it is no longer an experiment. Entrance to this house is effected, as will be seen from floor plan, on the ground line instead of the usual method of steps leading to the porch. The porch can be reached direct from the large and commodious living room through a double French window reaching to the floor. This window is flanked on either side by smaller casement windows set higher up. This arrangement of casement windows has been followed throughout the entire house wherever they would not interfere with the conveniences of the room or the furniture. In such case, regular check rail windows have been provided.

The interior arrangement of this house makes it susceptible to artistic development to suit the individual taste of the owner without increasing its cost. The extreme simplicity effected on the outside is followed in the interior finish and gives to this design a peculiar distinction and exclusiveness that would be impossible in the ordinary construction except at a greatly increased cost.

Entering the vestibule, we have 4 steps leading to the stair hall which is connected by cased opening with a magnificent living room extending across the entire front of the house. This room with its fire-place in the center, is universally admired and is one of the most desirable features of this handsome house. In the rear of the hall a closet is provided, which is large enough to be converted into a lavatory, if desired. A convenient feature of this design is the separate entrance to the stair landing from the kitchen, with a door on the landing so that the kitchen may be closed off entirely from the rest of the house. On the second floor we have three large bedrooms and bath with an abundance of closet space. The house is provided with a large number of windows which insures ample light and perfect ventilation and as a whole this design appeals to people of good taste and those who like comfort.

\$1070⁰⁰

8 ROOMS AND BATH

OUR house design No. 153 is along more elaborate lines of construction, being 28'x30' exclusive of porch measurements. This is really a very handsome house designed along Colonial lines, with a spacious porch, taking up three-fourths of the front and side and being supported by nine beautiful Colonial columns, neat, economical and practical throughout. The arrangement of the rooms, all of good size, well lighted and well located, is worthy of attention.

All of the elevations of this design are extremely pleasing. It is hard to select which is the most attractive, and the house makes an excellent appearance from any point of view.

While there is a general demand for a large living room, yet there are many people who, for reasons of their own, prefer to have a library or parlor in addition to the living room and if such is desired the living room need not be of extremely large size.

In laying out the first floor plan, advantage has been taken of all available space, nothing is cramped or crowded. All rooms are of ample size. The dining room, in addition to plenty of windows, has a door leading to the porch.

One of the many good features of this house is the absence of an expensive stairway to which many people object not only as a matter of expense but as a matter of keeping continually clean. The stairway has been located practically in the middle of the house within easy reach of all doors either on the first or second floor and will mean a saving in steps.

The upstairs is divided into four good sized rooms. Special attention is called to the large closets, excellent general plan of the second floor, also to the large windows. There is a door and stairway to the attic, but otherwise the attic is not finished. There is sufficient space for additional rooms which can be finished at a slight additional cost.

The construction is along standard lines, the same as followed in all better class houses and while the design shows weather boarding below the belt course and cement coat above; this can be changed to suit individual taste.

For anyone wishing a strictly first class house in every respect, roomy without any waste space, this house should appeal to one very strongly. Plans, specifications and material list for this house as well as our other designs will give full information as to the style, size and quality of all material in general furnished. See our Free Plan offer on first pages of this book.

8 ROOMS AND BATH

WE have affected various combinations in the designs we are offering in this book, but none of them, we think, is more striking than this. The size of this house is 30-6 feet wide by 30 feet deep, exclusive of porches. The external appearance is something out of the ordinary, and striking; the lower half being finished with shingles and the upper half with cement plaster, but this combination may be easily changed to suit individual taste without detracting from the general attractiveness of the house, and we shall be pleased to furnish prices for either siding or shingles or a combination of the two, whenever desired. The large, square-built-up columns, with the wide sweep of frieze on the front porch, makes the approach very impressive and imparts an appearance of massiveness to the house that is pleasing.

Entrance to the house is made directly into a reception hall of ample size, from which a handsome open stairway leads to the upper floor. This stairway is also accessible from the kitchen by separate steps to the landing, where a door is placed.

The large cased openings connecting the living room, hall and dining room lend roominess to the interior. The stair lands on the second floor directly in the center of the house, with direct access to the four bedrooms and bath, each bedroom being provided with a closet of ample size. We call especial attention to the fact that every bit of space is utilized to the best advantage.

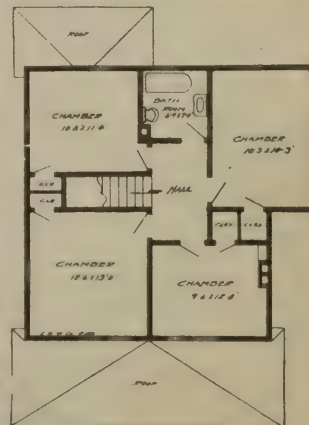

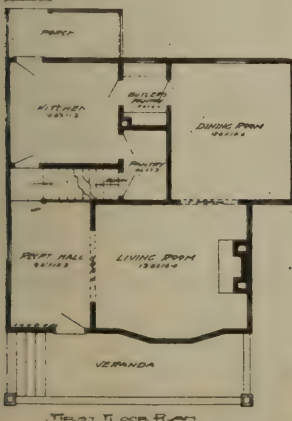

The rooms are laid out with a view to comfort and convenience, while the many windows are large and placed to provide ample light and perfect ventilation. The attractive fireplace in the front room lends cheerfulness to the whole interior.

7 ROOMS AND BATH

IN the above design we show a strictly modern residence of the two-story bungalow type. In size it is 24 feet wide by 32 feet 6 inches long, not including measurements of porches or extension of bay window. This design has been developed with much care and close attention to every detail, with the result that it provides the largest amount of room and the maximum convenience for a minimum cost for material and labor of construction. In locating the entrance we have departed from the conventional. It is placed on the side of the house instead of the front, where we have placed a small porch with large bulk-head posts and rustic seats, and covered with a rustic roof. The front porch is reached through the living room only, making it practically a private porch. This porch is especially designed to increase the accommodation of the house, and may be screened off in summer and closed up with sash in winter, at very slight expense. The square columns, wide bulk-head rail, and box beam overhead lend themselves admirably for that purpose. In this way this porch may be used for sleeping purposes in summer, or almost any other purpose desired.

The external appearance of this house design is especially pleasing. The combination of check-rail windows with casement sash, the substantial porch and wide flaring eaves of the roof, invest this design with that individuality which it is the aim of all architectural designers to achieve. The interior arrangement of this design leaves nothing to be desired. Upon entering the reception hall, a full view of the interior is disclosed through the large casement openings on either side and the magnificent living room, extending across the entire front. There are three large windows and a glass door in the front, and two casement sash with divided lights on each side of this room. The space beneath these casement windows may be utilized for book cases. The dining room is of ample size, and exceptionally well lighted by a large mullioned window in the bay and a pair of casement sash with divided lights in the rear.

Access to the basement is provided both from the outside and by a stair-way connecting with the kitchen directly under the main stair. The latter is modern in design and easy of ascent, and receives light from a casement sash on the landing. On the second floor are four large bed rooms and bath and five closets. The lighting and ventilating facilities are ample and complete, and all things considered, this design is one of the most desirable of modern homes, and will look well in any locality.

Our plan proposition and the quality of the material entering into the construction of our designs are fully described on the preceding pages of this book. In our List of Material we give catalog numbers, so that anyone may be able to identify the doors and windows and other miscellaneous items entering into the construction of these designs.

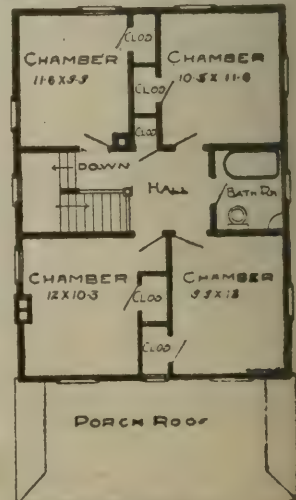

SPECIAL NOTICE: We have designed a special semi-mission style of interior trim for this house, especially suitable for oak finish, and we will furnish this trim, oak floor in living room, front hall and dining room, at an extra cost of \$70.00, to be added to the above price. When sending in your order for plans, be sure and state if this special oak trim detail sheet of plans is desired.

8 ROOMS AND BATH

THIS design shows a further development of the two story bungalow pattern with veneer cement on the outside; a method of construction very popular. The size of this house is 24' 6" wide by 30' 6" deep, and with its massive porch across the front and heavy dormer in the roof, has a very substantial and lasting appearance.

The interior of this house may be developed into many changes and artistic arrangements. The extreme simplicity is one of the crowning features of this design and makes it so desirable to many people. The interior arrangement is very much like some of our other houses but still has individuality enough to give it distinction. The house has seven rooms, hall, pantry, bath room and four closets. It is extremely well lighted and ventilated and possesses every convenience. Communication between rooms is facilitated by large case openings. The stairway is modern in design and construction and easy of ascent. The closets are properly and conveniently placed and everything has been arranged to meet the requirements of a modern home.

In the selection of materials for the construction of this design, we have been governed by the general character of the house. Everything we supply is strictly brand new stock, the quality being in keeping with the general design.

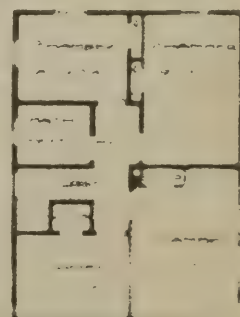

We refer you for a more detailed explanation of the material we furnish to our "Material and Specification" section and also ask you to carefully read our Free Plan Proposition as outlined on preceding pages.

6 ROOMS AND BATH

UNLESS your requirements demand a real big house or unless your tastes run to large residences, this admirable six-room cottage will surely commend itself as a very desirable little home.

Picturesque in its simplicity, without being classified as a picture house, it will win its way into the hearts of such people who must of necessity remain within a close limit of their building appropriations, but who nevertheless want to obtain as much beauty and comfort as their circumstances will permit.

This design will also appeal to folks who from choice are naturally plain and simple in their tastes, but still have an eye for symmetry and desire that coziness of interior lay-out so attractively exemplified in this home-like cottage.

Outside of the porch balustrade the chief ornamental feature is the central bay which runs all the way up, extending beyond the roof of porch and finished off with a hip-shaped roof, so you see that economy has not overshadowed everything else except in so far as economy in construction is concerned. For this important phase is always the main point of consideration.

Something very seldom seen in cottages of this size is the manner of outside wall construction. These are cement coated or plastered all the way up to the eaves, including the bay, both below and above the porch. This distinguishing feature will cause it to be singled out from the common herd.

Including the bay, its size is 24 feet wide x 27 feet deep. Contains parlor, dining room, kitchen, reception hall and pantry down stairs, and three chambers and bath up-stairs. The parlor will be the logical living room since it occupies the most prominent position and is the largest room in the house, being 12 feet x 14 feet 6 inches. The dining room is 12 feet x 11 feet 3 inches, and kitchen 10 feet x 11 feet 3 inches.

Cased openings divide parlor from reception hall, dining room and stairway. The kitchen communicates directly with both the dining room and parlor. Extra conveniences are the coat closet off reception hall and seat off the parlor in recess of stairs. There are also steps to the basement entrance of which is off the dining room, which, however, is entirely excluded from view by a door as noticed.

The main bedroom is 12 feet x 11 feet, has straight wall all the way up (no slope to ceiling), and the other two are 10 feet 3 inches x 11 feet 3 inches, which dimensions are plenty large for all practical purposes, and the four closets thereto provide ample room.

In keeping with the general style of design, nothing fancy has been attempted in the way of art glass windows, as they are just plain ordinary windows with clear glass. The modern front door has full length double strength glass. The interior doors are five cross panel of first quality, and well made. In fact every bit of material about this house has been selected with care, substantial all the way through. The chimney is placed in an ideal location for stove heat, adjoining all the three rooms down-stairs.

In the front part of this book, we explain fully just what material we include for our house designs and we also urge you to read about our "Free Plan Proposition."

6 ROOMS AND BATH.

NOW here is a Cozy Nest, just the thing for those who have concluded that it is time to bring the long thought of plans for home to a realization. Design No. 81 is a modest little Cottage that can be built for less money considering the amount of space, comfort, and convenience it affords than many a house, considerably larger in size. If you are among those that have been planning and planning on how to get that home, you naturally wish to make every dollar go as far as possible.

In presenting our design No. 81, we have another one of those cement plastered houses which is bound to win its way into the hearts of many intending home builders. Sufficiently attractive in outside appearance to compel notice, this house nevertheless can be built at an astonishingly low figure by taking advantage of our liberal offer on material and following our plans and specifications.

The main part is perfectly square, 24 feet each way, and in addition there is a full width porch, set-out windows in front, and a projection in the rear. The front porch especially is pleasing to the eye. Notice the graceful appearance of its gabled roof. The twin windows with divided lights in the upper sash add not a little to the general beauty.

Within everything is strictly modern; reception hall with open staircase; large parlor with a cozy fireplace—and that little built-out place at the front is just right for a window seat; the dining room and kitchen are conveniently connected. You also have access to the kitchen by way of the reception hall. See the small opening off the kitchen to the cellar way under the main stairs and the closet

opposite; isn't this a handy arrangement? The pantry sets off from the kitchen and forms a shelter for the back porch. Three bedrooms, bath, and plenty of closets are to be found upstairs; a long hall, lighted by a window at the stair landing, connects these apartments. That main bedroom is the largest room in the house and has two large windows in front; when you can't enjoy your porch you will find a most delightful place for your sewing chair in this window space.

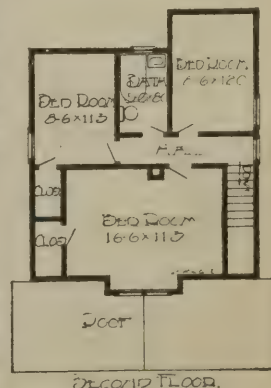

There may be some who will try to persuade you to build a higher priced house because it's not as large as the kind your grandfather built but if you like this plan, write and let us tell you all about it. As a bargain proposition, you could not make a more suitable selection. We furnish sufficient material to build this house according to our plans and specifications for the very low price mentioned above. If you wish, we can submit estimates on either weatherboarding or shingles. All material of guaranteed quality. Our Free Plan Offer is set forth in detail on previous pages.

6 ROOMS, BATH AND
RECEPTION HALL.

A CHARMING little nest for two—simple but artistic; not cheap looking, but can be constructed very economically by adhering strictly to our plans and specifications. As an investment in real estate, or for an industrial proposition—where manufacturers build houses for their employes—this house is especially recommended, both for quick returns or a permanent investment—easy to build and easy to maintain. For a desirable group of houses or terrace, this design, alternated with designs No. 81 and 84, would produce a combination of unusual effect, varied and interesting.

Don't attempt to build this house from the picture. The full set of plans we furnish will prove a valuable aid to your carpenter and a protection to yourself. As shown in the illustration, the outside walls are cement veneer, roughly plastered on, which makes a very pretty finish. Weatherboarding and shingles can be used or a combination with cement, with good effect. Prices for such changes furnished promptly upon request.

Notice particularly the wide front porch with its projecting eaves. The main roof effect while plain, without breaks or dormers to add to the cost is wonderfully strengthened by the hip-shaped porch roof. The house itself is held closely within four square walls; no bays or projections of any kind. Those double windows, with the upper parts cut up into small lights, are very much the thing these days.

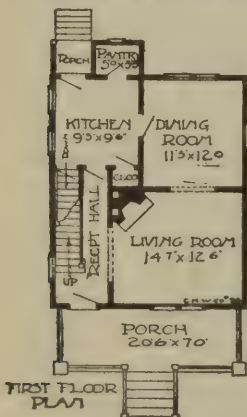

Inside is found the combination of reception hall, living room and dining room joined together by large openings. The open stairway leaves a long passage to the kitchen, a handy feature.

Imagine for yourself that open fire place throwing out its cheering warmth. Consider the possibilities of the arrangement; you can trust a woman with a sense of the artistic to make this an attractive home. Handsome colonnades for the large openings can be provided at a very moderate cost. Some of the best designs are shown in our large general catalog at very low prices.

The kitchen is of unusual size—room to turn around—and a place for everything. In addition to the pantry there is a small closet which cannot fail to have its uses. You do your own work? Then you will be sure to like the kitchen arrangement. The little back porch, partly sheltered, can be completely closed in during cold weather. The way to the basement is in the kitchen directly under the main stairway. On the upper floor are three bed rooms and bath, all opening into the hall at the head of the stairs.

Plumbing and heating equipment can be installed at the least possible expense. Read our Free Plan Offer. Let us send you the complete set of plans and specifications comprising the blue prints, working plans and descriptive material list, everything thoroughly explained. Our material is all of an unusually good quality and finish. You will be agreeably surprised.

By following our plans and instructions, home building becomes a real pleasure and not a mess of annoying details.

6 ROOMS AND BATH

THE popularity of the bungalow is due no doubt mainly to the popularity of the city flat, or apartment, where every convenience is on one floor, and the bungalow is practically the city flat or apartment transplanted to the country, with more ground and privacy. In a bungalow there are no tiresome stairways either up or down, and comfort is the main issue.

In our design No. 160 we show indeed a design of bungalow that is original and correct in every detail. This design is well suited for a good sized family, having a large spacious dining room, with a beautiful octagon bay window at one end, the other end being ornamented by a fire place which should be built of brick. The parlor is directly off the dining room and entrance to same can be had from any of the bedrooms without passing through any one of the chambers. There is also an entrance directly off the porch to the parlor.

Particular attention is called to the fact that there is a large sized closet in every bedroom. The bedrooms are of ample size to meet all general requirements and have an abundance of windows for light and ventilation. The kitchen and pantry are conveniently located, and the kitchen has a good sized porch attached. This porch is hidden from the front by the projection of the dining room, as is shown on the plans, which gives it a privacy that could hardly be had otherwise.

Floor Plan

The design of this bungalow is laid out for convenience and for construction along economical and solid lines. One can imagine what a pretty picture this would make under proper surroundings. Its well broken lines, porch construction and tower, give it an individuality that is rarely met with in bungalow designs. The interior is equally as pleasing. For convenience it cannot be surpassed, the bedrooms being on one side of the house and entirely private from the rooms mostly used, and as a labor-saving and step-saving house it is worthy of the closest consideration on the part of the housewife.

The material we furnish for this design is the same as furnished in all our other better class houses. Is furnished regularly as a cement coat job, using Brykits patent sheathing lath for the entire exterior upon which cement plaster is to be applied.

If, however, siding or shingles is desired same can be furnished at an additional cost, but this is a matter of individual taste. This bungalow will look extremely well with shingles, cement veneer, or siding; either will make a happy combination.

Our plans, specifications and material list that we offer in accordance with our free plan offer, outlined in the introductory pages of this book, will give also a full description of every item entering into the construction, giving size, quality and style, and catalog number as in all our other designs.

8 ROOMS AND BATH.

AN artistic home, within and without; just what you have been longing for—now, isn't it? And don't think because it is beautiful that it is beyond your reach. Emphatically not. If you will study the plan carefully you will notice that it is laid out on simple lines and plain, not fancy. Simplicity is art itself. This house is an artist's conception, an inspiration if you will, but a home in every sense of the word. Belted by a broad band of stucco or pebble-dash, a pretty contrast is afforded by the stained shingles above the narrow weatherboarding below. Trimmed in plain white the effect may well be called beautiful. As to cost, you have only to consider the low price we put on the material. Send for the plans and specifications. Any competent carpenter can build this house as cheaply as the plainest kind of a structure.

Now let us look into the arrangement and see if they suit. Possibly there are a few changes you would like to make. If so, don't hesitate to write us about it; our architects will be glad to advise you and suggest how some pet idea may be carried out and not disturb the harmony of the whole. We will mention just a few of the main features. The unusually large front porch, extending the full width of the house is just the place you will spend every hour of spare time when the weather is at all fit. The man of the house may think he won't be able to appreciate this porch, but he will, just as surely as he is a normal human being. A few evenings after work, a few quiet smokes, and the habit will be fixed. Note the ease with which the porch may be screened—no round posts or porch rail to match with screen frames. The front door opens into a vestibule with the reception room just beyond. The large bay in this room offers many possibilities. An open stairway leads up directly out of the reception room.

The large living room, with its cheery fire-place flanked on either side by broad windows, is the principal feature in this home; wide openings into the reception room and dining room give the impression of greater length and breadth and you will not lack for space when entertaining your guests; the long winter evenings will pass quickly enough before the open fire. This home has all the conveniences; a bright, cheerful dining room with a good sized room off the back that may be used as a bed room, den or study, a large, well-lighted kitchen with good-sized pantry; the back porch off the kitchen which in winter can be made into a sheltered nook for many practical uses.

The second floor is laid out to the very best advantage. You may not need all four bed rooms. Do you want to fix up a cozy den? There is that extra corner room on the lower floor—the very thing. Closet room galore, the utility of which need not be dwelt upon and besides there are two other spaces upstairs, shown on the plan as walled-off pockets, which at little expense can be made to serve as store-rooms.

If you have read this far, you are interested. You will be interested still more in the complete set of plans showing the different elevations and all the details. Take advantage of our liberal Free Plan Offer as outlined in the introductory pages of the book, and build the kind of a home you want.

Of course the material we furnish is all good stock, all interior finish of the latest design, clear stock—our plans, material list describes in detail and gives catalog numbers on all items where necessary. Write today.

5 ROOMS, BATH AND
RECEPTION HALL

THE Home Ideal—of that attractive bungalow type, growing more and more into popular favor as the people gradually learn to appreciate the genuinely artistic. Go to any city or resort noted far and wide for beautiful homes and what sort of houses do we mostly find? A very great many are not dissimilar in appearance to our Design No. 79. We do not claim so much for originality in this design, so far as looks go, but we do claim that by our plans we are giving you an arrangement well-nigh perfect from the standpoint of utility, comfort and convenience which, without sacrificing any of the features that make for beauty, can be built at an extremely moderate cost. The most painstaking care has been used by men of recognized ability, the best in their line, to make the plans in this book the crowning achievement of a lifetime spent in their chosen field of endeavor; spurred on not only by a desire to make our proposition as attractive as possible but to be contributing factors in the progress and welfare of humanity.

A perfect home—all the conveniences on one floor—5 rooms, bath, pantry, front and rear porch and a number of closets. A home that you will be loath to leave even for a short while—a home to which you will return each time with ever increasing satisfaction.

Can you conceive of a better arrangement? You may have some different ideas which can be incorporated in this plan; write to us for suggestions. Entering by way of the reception hall, which is supplemented by a handy coat closet, a few steps bring us through the cased opening into the living room with its front triple window. "What a fine view," you immediately exclaim. Living room and dining room almost can be considered as one, joined as they are by means of a large opening eight feet high and extending practically the entire width. The combined length of these two rooms is over 25 feet. Two large windows in the dining room provide plenty of light. The kitchen with extra large pantry, two bedrooms, each with a closet, and bathroom complete the interior arrangement. The rear porch has only two sides exposed and can be screened in, if desired. When you come to need more room the attic can be fitted up at a slight expense. It is already well lighted by the dormer windows.

You certainly will learn to love that front porch, as wide as the house itself and roomy enough to entertain a small army of your friends. The front door is a feature; large, extra heavy and glazed with a long beveled plate glass. Those windows and sash with the divided lights are distinctive and in keeping with the general appearance.

The outside walls are covered with rough beveled siding, extra width, which we manufacture special for this particular house pattern. When stained this rough siding is far more beautiful than can be imagined from the illustration. A narrow band of cornice at the top of the windows follows around the house on a level with the porch roof. The eaves have a good projection. When properly trimmed in combination with the stained siding the effect is as pretty as can be imagined.

Can this house be built economically? Positively YES. Note particularly the possibility of low cost foundation construction, since we furnish all material to the grade line as shown in the picture, and don't overlook the fact that we furnish Brand New Material throughout, every piece guaranteed to be up to standard requirements. The clear Yellow pine finish for the inside can be stained, varnished or painted to suit your taste.

This house can be equipped with heating plant and comfortably heated at low cost. You see at once that the plumbing can be installed cheaply.

HOUSE DESIGN No. 162

SIZE 28 FT. X 42 FT. 6 IN.

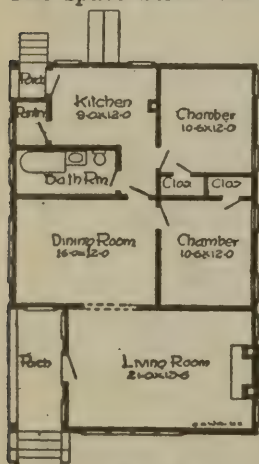

PRICE F.O.B. CARS CHICAGO **\$723.00**
Write for Actual Delivered Price

5 ROOMS AND BATH

IN our design No. 162 we show a typical bungalow of the latest pattern. The low roof with its exposed rafters and wide eaves gives this bungalow that air of solidity which is the chief aim of all designers of buildings of this class, while the shingles with which the house is covered from the window sills down to within a few inches of the ground will invest this building with an appearance of age that is exceedingly restful to the eye. The selection of the right color for exterior painting will bring out the salient features and artistic lines of this bungalow to their fullest extent.

The size of this building is 28 ft. wide by 42 ft. 6 in. deep. The living room, 21 ft. wide by 13 ft. 6 in. deep, extending across the entire front, with its eight windows, is everything that can be desired in a room of this kind. The space below the casement windows on each side of the large fire place provides comfortable nooks that may be utilized for seats or book-cases, and book-cases may also be placed under the casement windows on each side of the front door. The dining room is of ample size, and through the cased opening, a full view of the fire place in the living room is obtained. By glazing the four casement windows in the living room with colored-art, or beveled-plate, the interior of both apartments will be flooded with its mellow light, which at the setting of the sun, will cast vari-colored rays over furniture and rugs in a way as to delight the eye.

Though there are but five rooms and bath, they are of more than ordinary size. This house was designed to meet the wants of those who prefer a limited number of rooms of liberal size to a larger number of the usual cramped dimensions. First-class material such as we supply for our best designs, as described in our Material Specifications and lists furnished in connection with our Blue Print Plans, and honest work in the item of constructing this bungalow will produce a neat, artistic, and convenient home which appeals strongly to persons of good taste and moderate means.

**4 ROOMS, BATH AND
RECEPTION.**

THIS new design is bound to become very popular because it is a popular size 24 ft. wide 33 ft. long or 38 ft. long, if the porch is included in the length. It is a typical Bungalow in the fullest sense of the word with its wide projecting eaves and half-enclosed porch, which extends across the entire front. For convenience in layout, economy in cost of construction, and cost of material this pretty five room bungalow has no equal considering its size. Has all modern conveniences and all on one floor, consisting of living room or parlor, dining room, kitchen, chamber, bath-room and reception hall. Sizes of rooms are as follows: Living room, 11 ft. 3 in. x 13 ft. 6 in., Dining room 11 ft. 3 in. x 14 ft. 3 in., Kitchen 11 ft. 3 in. x 9 ft. Bedroom 11 ft. 3 in. x 11 ft. 9 in., Bath room 5 ft. x 11 ft. 3 in. The height from floor to ceiling is 9 ft.

A wide cased opening connects reception hall with living room and a similar arched opening connects living room with the dining room. The kitchen is directly off the dining room, saving the thrifty house wife a good many steps. The kitchen sink adjoins the bath room wall reducing the expense of plumbing connections to the lowest possible minimum. The largest of the two chimneys as shown in the picture is in the living room specially designed for a modern fire place and the small chimney is in the dining room corner directly adjoining the kitchen, so that the matter of stove heating is taken care of properly and very conveniently.

Another feature not usually found in bungalows of this size is a convenient stair way to the basement. The steps are located directly off the kitchen. The platform, two steps down, forms also the entry from the rear and is on a line with the grade, making it unnecessary to have any outside rear steps. The triple window arrangement in dining room and bay window in the living room, the double window in the bedroom and the two separate windows in the kitchen afford a flood of light over the entire house.

Not a single thing has been overlooked. We have even provided for a nice roomy closet in the reception hall, which may be used either for a coat closet or many other useful purposes. Every bit of material for this design has been selected carefully with the aim in view to construct it on economical lines. This is the reason we can name such extremely low prices. Everything has been figured out before hand with the utmost care leaving out all unnecessary parts, such as would add only to the expense and not to the utility. Ornamentations however, have not been lost sight of entirely as evidenced by the barge boards in the gable and the fancy sash and windows divided with wood bars. To those requiring extra room, this can easily be arranged for by finishing off a couple of rooms in the attic. The entire house is finished with lap or beveled siding, except front gable which is shingled. The porch is sided also. Interior finish is all clear stock, and our descriptive material list furnished free with plans will give you a correct idea of just what class of material we furnish and all other valuable information.

Plans are also furnished free as fully outlined on previous pages.

6 ROOMS AND BATH

DESIGN No 119 is a further development of the bungalow pattern of house construction; with its six rooms, pantry and bath, it has all the conveniences on one floor. In size it is 31 ft. 6 in. wide by 38 ft. long, exclusive of the porch with a hip roof and wide eaves extending over the porch. It carries out the extreme simplicity characteristic of this style and is exceptionally pleasing to the eye in external effect. Entrance is made directly into the living room from which all the other rooms are easy of access. The house has an abundance of closets and every convenience required. The windows are large and numerous and placed to insure ample light and perfect ventilation. The interior can be changed to suit individual tastes if desired, as there is ample floor space to work on.

This design appeals strongly to people who prefer the bungalow style of construction. As by reason of its compactness of arrangement, it may be constructed at a minimum cost and still provide all the essential conveniences of a modern city home.

The material we supply is all strictly **Brand New** stock of a quality in keeping with the general design. For further information as to the quality of the stock we furnish, we refer you to our **Material Specifications** section where our material is described in detail. We also supply **Free Plans** specifications and list of material showing the purpose for which every item is intended. A careful perusal of these sections will be of inestimable value to you.

6 ROOMS AND BATH

WE present herewith a bungalow intended for a wide city or suburban lot. In size it is 39 ft. 6 in. by 27 ft. deep. It has a living room, dining room, kitchen, pantry, three bed rooms and a bath room and is in every way a complete and modern home on one floor. The fire-place in the corner of the living room adds cheerfulness to the surroundings. All the rooms are of easy access from the living room of the house. There are no waste spaces where not needed and the whole plan has been developed not only for convenience and beauty but in harmony with the general character of the bungalow pattern. For a summer or suburban home, this class of house offers many advantages not possible in designs of different construction, and we especially recommend this design to people of good taste and moderate means as an ideal home at a comparatively small cost.

The Bungalow pattern of construction was at first employed only in houses intended for temporary use, but their beautiful outlines and great convenience soon brought them into rapid favor as suburban and city homes. In this design we show one of the most pleasing examples of this deservedly popular style.

The material we furnish is all **Brand New** stock as described in our **Material Specifications** and we also furnish **Free Plans**, specifications and list of material for each of our designs as outlined in preceding pages.

4 ROOMS

IN the above design we illustrate a four room cottage of the bungalow pattern, 26 ft. wide by 22 ft. deep, with a wide porch in front, the roof extending over the entire house and porch under one framing. This house has the wide projecting eaves and extreme simplicity that stamps the bungalow pattern and with its low wide dormer in the roof and the colonial windows, makes a pleasing appearance.

The design is primarily designed for summer use but has grown in rapid favor as a suburban home and in many cases is used for a permanent home. This house is of moderate size and within its limited space, modern conveniences are, of course, impossible but the design may be developed along more imposing lines and may be made a comfortable and convenient modern home. On the preceding pages, we illustrate some larger designs which show what may be done with houses of this character.

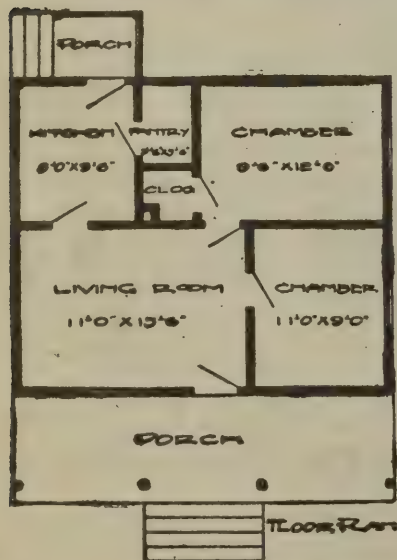

The material we supply for this design, as for all our others, is strictly **Brand New** stock, good quality in keeping with the general character of the house. We refer you for further information regarding this to our "**Material and Specification**" section in this book where a full description of the material will be found. We also ask your attention to our **Free Plan Proposition** as outlined in the preceding pages. Shall be pleased to answer any inquiries relating to this or any other house pattern.

7 ROOMS AND BATH

IN design No. 118 we show a modern cottage of Colonial architecture that meets with instant favor of those who prefer a cottage to a two story house. In size it is 24 ft. wide by 42 ft. deep in addition to its porches. Its trim outlines and its unusually large porches, with nearly 350 square feet of floor space, makes this cottage an ideal country home.

In interior arrangement and convenience, it has all the opportunities of a two story house, there being a parlor, dining room, kitchen, pantry, chamber and closet on the first floor with three moderate sized chambers and bath room on second floor. There is a door leading from the dining room and another from the kitchen to the back porch which offers many conveniences. The windows are large and placed at convenient positions to insure ample light and perfect ventilation for the entire house.

In offering this design to our customers, we believe that there are few houses that for cost of material and construction, will compare with this. In laying out this house, we have aimed to eliminate every possible waste both in material and cost of labor and since it has been put on the market a short time ago, we have received many commendatory letters from satisfied customers.

The heating arrangements have been provided for by two chimneys making it easy to heat this house either by stove or furnace at a minimum cost, and the cost of the bath room equipment and plumbing installation has also been considered, and we are confident that for the space provided and the conveniences, this cottage will appeal to people of moderate means and good taste.

The materials supplied for this as for all of our designs is strictly Brand New stock as outlined under the heading of Material Specifications. Also ask your attention to our Free Plan Proposition as outlined in preceding pages of this book.

SPECIAL DESIGN PLANS HOW TO SECURE THEM FREE

ON this and the following pages we illustrate special designs. These are only a few of the many hundreds we have made to the order of our customers. If you do not find a design in this book that answers your particular requirements, tell us what you want and we will make a special design bound to please you. Regular Blue print plans, etc., for any of the following designs may be had under the same conditions as any of the other designs shown. See our free plan offer on page 4 of this book. We maintain a large force of Architects, Designers, Estimators and Draftsmen of practical, sensible ideas. Most of them are men capable of handling the actual building operations. When a line is marked on a plan, they know exactly its purpose, and when an item is listed in the Bill of Material, they know exactly where it goes. You get the benefit of years of actual experience and thus avoid objectionable and costly errors, which on the finished job may mean a saving of 15 to 25 per cent. Never attempt to build without correct plans—you will surely regret it.

We are exceptionally well equipped to furnish you plans that are absolutely accurate and dependable in every particular. It makes no difference whether you require plans for a coal shed or for a \$25,000.00 residence or factory building—we are prepared to do the work promptly and satisfactorily at prices extremely low. Our charges range from \$15.00 up for special designs. \$25.00 will cover almost any ordinary style of house up to ten rooms. Plans will be equal in every respect to our regular plans.

We submit your pencil drawings of the floor plans and front elevation for your inspection and correction before proceeding with the work of finishing blue prints.

YOU GET THESE PLANS FREE

You get these plans free if you purchase your building material from us. The amount charged you for the plans is deducted from your purchase price of the material, and thus you get these plans drawn after your own ideas, absolutely free. We do not aim to make a profit on our plans, but to assist our customers in getting a definite idea of their requirements. We are satisfied with our regular small margin of profit on the building material.

Below we list our various offers covering Architectural services. In sending inquiries or orders for any of these offers, be sure to mention the number and to inclose rough pencil sketches, also any additional information that will assist us in complying with your wishes and working out your ideas.

- Offer No. 23-581. Sketch Plan (see page 5) . . . \$ 5.00
- Offer No. 23-582. Special Blue Print Plans as mentioned above, upwards of . . . 15.00
- Offer No. 23-583. Artist's Pen and Ink Drawing 8 x 10 inches as described elsewhere on this page . . . 10.00
- Offer No. 23-584. Artist's Wash Drawing 10 x 14 inches as mentioned elsewhere on this page . . . 15.00

If you wish to know the cost of any work not included in the above list, we shall be glad to advise you fully.

ARTIST'S PEN AND INK PERSPECTIVE DRAWINGS

Perhaps you would like to see how your house will appear to the eye before it is built. A perspective drawing may show you that the building does not suit you at all, and it may show it to be exactly what you desire. Still it may be the means whereby you will avoid undesirable features, the changing of which would be very expensive and involve more than ten times the cost of the perspective drawing.

If you are particular about the appearance of your house and want to see if it makes a good appearance by all means have an Artist's perspective made of same.

The size eight by ten inches is a good size, and when framed will make an acceptable keepsake, for yourself or friend or make a suitable picture for any wall. It will be on regular Artists Bristol Board.

In ordering perspectives be sure and state which of the two sides you want shown, as you will note from the above illustration that only two sides can be shown.

The drawings can be made from finished Blue Prints, from pencil plans or from good rough pencil sketches.

In writing regarding Artist's Pen and Ink Perspective Drawings be sure and mention "Offer No. 23-583". Our prices on the above is net, \$10.00.

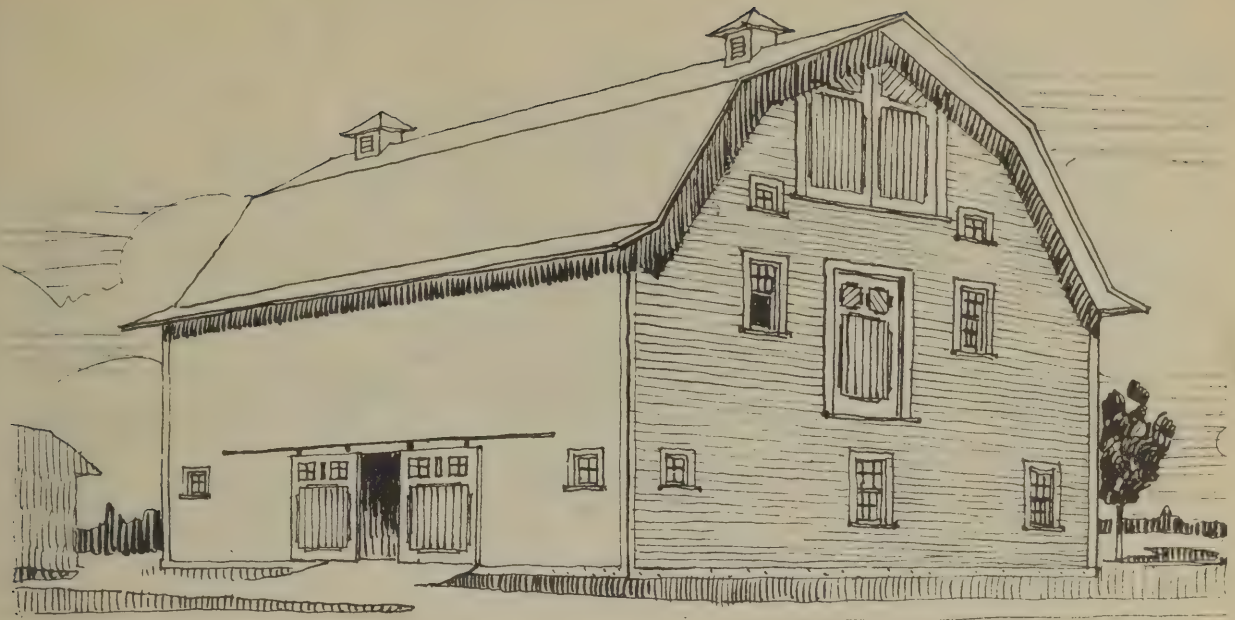

ARTIST'S WASH DRAWINGS

An Artist's Wash Drawing is the same as a water color, except that it is all one color correctly shaded, similar to a photograph. Two sides only can be shown, the size we furnish is 10 x 14 inches, which will make quite a large and handsome picture suitable for framing purposes, and will make an acceptable hanging for a wall, or gift to a friend. Please note the size 10 x 14 inches, this is considerable larger than the Artist's Pen and Ink Drawing offered under our offer No. 23-583.

Wash Drawings can be made from Blue Print Plans, Pencil Plans or good rough sketches furnished by owner.

In writing regarding Wash Drawings be sure and mention "Offer No. 23-584". It will save time. Our prices on above is net, \$15.00.

BARN DESIGN No. 215

A SPECIMEN OF OUR ARTIST'S PEN AND INK PERSPECTIVE DRAWING.

See Offer 23-587 Mentioned Below.

THE above Barn was designed specially for a customer, but on account of its popularity we have made it one of our regular designs and furnish Blue Print Plans under our free plan offer as outlined on page 4 of this book. We show it for two purposes, first, to illustrate a sample of our Artist's drawing, and, second, as a regular plan for which we offer to sell the material under the same guarantee as other Barn plans shown.

Our design No. 215 is a modern up-to-date building designed as a general purpose barn for a small farm. In size it is thirty feet wide, forty feet long and sixteen feet to plate. The stable is eight feet high in the clear with hay mow above extending over the entire building. There is a driveway, twelve feet wide, through the stable from the sides. On one side of this driveway is the horse stable, sixteen feet wide, with a six by sixteen foot grain room. On the other side are the cattle stalls, twelve feet wide, with a six by twelve foot grain room. There is room for six horses and eight cows. All the stock face the driveway, which also answers as a feed alley, as the grain rooms open directly into it. The hay may be dropped into the driveway from above and distributed to the stock with very little labor.

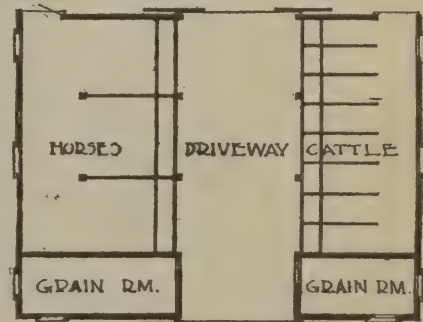

The entire stable part of this barn is lined on the inside with eight inch shiplap up to the hay mow floor. The partitions between the grain rooms and stables are lined on both sides. Movable slides, of the same material, and arranged to slide between cleats, are provided instead of doors so the rooms may be filled to their full capacity. The partitions along the sides of the driveway reach to the floor above so the horses and cattle stabled are entirely independent of each other.

The outside of the building is covered with six inch drop siding. The roof with our three-layer guaranteed Rubber-Raw-hide Roofing. We can, however, furnish shingles or galvanized iron roofing at an extra price, if desired.

Kindly note the numerous windows with which this barn is provided, insuring ample light to every part of the building. We have placed two barn sash in each of the sliding doors opening into the driveway so there will be no dark corners anywhere. A large door is placed in one gable for unloading hay with hayfork, and just below it, on the mow floor line, we have put another door. This door is one of the most convenient features of the barn, as it may be used for a variety of purposes for which the higher door would be useless. It has been our aim to provide this barn with every possible convenience to enhance its practical usefulness and no detail has been neglected.

The barn is designed for a cement floor in the stable and driveway as well as grain rooms. This floor should be enough higher than the ground to admit of easy drainage. We are including in our price all the material required for horse and cattle mangers and stall partitions, in fact everything complete, above the foundation, except the cement and paint.

Price of plans \$2.00, same as other designs. Price including stable and grain-room, **\$485.00**

9 ROOMS, BATH AND
RECEPTION HALL.

This house is the property of a Michigan lady. It was built with our material from plans made to order for her by our Architectural Department. One reason we publish this design is to demonstrate the efficiency and versatility of our staff of artists and designers and to furnish an example of what we can do in the line of special plans. You now can possess yourself of this complete set of Blue Print Plans and specifications for \$2.00 which sum is credited on your account for material if you buy the bill of us. For further particulars read our Free Plan Offer on page 4.

The floor plans show a big, square house—two feet longer than wide—with an immense front porch or veranda. The tower, of course, is the conspicuous feature—and affords the finishing touch to make perfect harmony of the whole scheme. To the lady—mentioned above—whose mind conceived this plan, a full share of credit is due; we claim also a share for our assistance in carrying those ideas to a successful conclusion. The gables are shingled to the belt line—the rest of the walls are plastered with cement. The porch roof is an extension of the main roof—notice that graceful swing where it bends around the tower; the eaves are wide projecting well out; numerous columns formed in clusters ornament the porch; an old-

fashioned outside chimney marks the location of the living room fireplace. The vestibuled entrance has two large glazed doors and two sets of side-lights, leading into the long reception hall; this hall continues clear back to the kitchen wall, giving access to all parts of the house, including the main stairs and the cellar way. Two stately colonnades, of colonial design, are set opposite each other, giving an unobstructed view from the fireplace to the corner of the library. Observe the large dining room with its quadruple window, the butler's pantry with double swinging doors, the kitchen with back porch, plenty of light and additional pantry space, the handy coat closet at the end of the hall; also notice the well-located hall upstairs—this is a feature. Our price also includes material for the closed stairway to the attic and for the attic flooring, and particularly don't fail to take in the two larger bedrooms, one of them circling out with the tower. Let us mention here that the windows, frames and interior trim are made special to follow the curve of the tower, the windows being glazed with bent glass. Decorative windows and circle-top sash are provided for the dormer and gables. You can find out all about this design by writing to us.

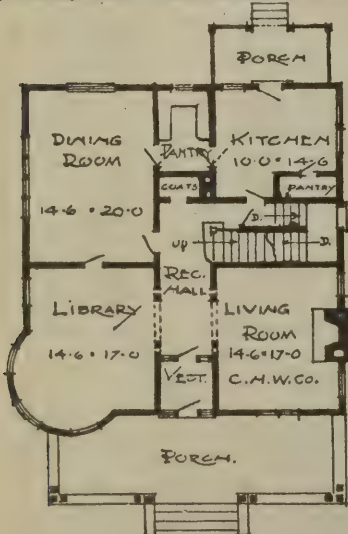

Regarding heating and plumbing special attention has been given in working out these plans. See our low estimates on equipment.

11 ROOMS AND BATH.

THIS house makes a desirable suburban or country home. The plans for this design will be furnished according to our Free Plan Offer on page 4 of this book. There are two separate entrances from the front opening directly into the living room, while the visitors' door opens into the reception hall, thence, through double sliding doors to the parlor. Back of the parlor is a room, marked on the plan as a bed room, which can be used either for back parlor or guest chamber. The main stairway is an open, straight flight, except for the landing, two steps from the top. Another outside door enters the living room from the side at the extreme end of the porch, which extends around this corner of the house. In the living room there is an open fireplace. The kitchen is immediately back of the living room and the dining room sets off at the far corner of the house with an opening into the long hall-way and a swinging door connection with the kitchen. You easily can change this arrangement and with scarcely any alteration in the plan, the dining room and kitchen could exchange places. Upstairs we find four good large bed rooms—each with its own closet, the bath room—a store room—and at the end of the hall—there is an alcove, just right for a cozy little den.

The house presents a broad expanse of front and the porch, with its wide eaves, extends far beyond the main building. The large, colonial porch columns are mounted on piers of solid masonry. The gables are shingled; the main walls are covered with beveled siding or weather-boarding. Some decorative features such as the art windows in the front rooms and the circle-top sash in the dormer and front gable, add to the general beauty. The back porch can be sheltered in at little expense, a wind-break or shield being formed by the off-set where the pantry is situated.

We furnish every bit of the lumber as outlined in our Material List that goes with the plans at the price above stated. First class Brand New material too—every stick of lumber, every piece of mill work, every article of hardware fully guaranteed to be up to grade and as represented in every way.

9 ROOMS AND BATH.

ADAPTED from our Design No. 150B, reversed from the original plan and made considerably larger, the plans for this special House Design were made to order in our Architectural Department for a customer whose requirements called for a somewhat different arrangement from our House No. 150B which appears on another page of this book. For full information regarding our Special Plan Proposition we refer you to page 48; there you can find out how to proceed if you have some original ideas about house building which you wish to put into execution. The plan shown herewith has been adopted as one of our regular stock designs and the blue prints, specifications, etc., can now be obtained under our Free Plan Offer described on page 4.

This is a house with cement-plastered gables of the old English type of half-timbered construction, conspicuously ornamented with leaded art windows. Four big, square, paneled columns mark the front porch which covers the entire front and runs quite a ways along the side. The above sketch shows only the front gable while every side of the house, including the rear, is equally artistic. Gable sash and roof dormers all around furnish light for the attic which can be fitted up at slight expense if additional space is needed. The attic stairway is already provided for in our estimate.

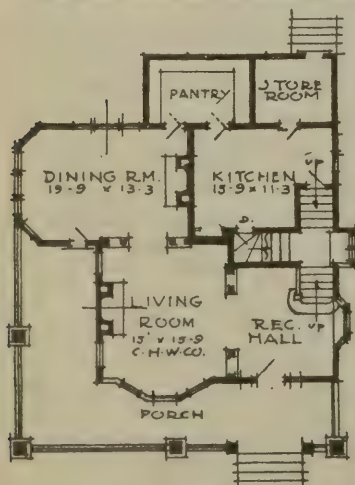

The first things you will notice in looking over the floor plans are two open fire places—located respectively in the living room and dining room—and the double stairway, accessible either by the open way from the reception hall or the closed passage from the kitchen. In addition to the imposing front entrance with its leaded art sidelights there also is an entrance from the porch at the side into the dining room. The large pantry connected by swinging doors with both dining room and kitchen will prove a real blessing in many ways. Instead of a rear porch we have an entry-way or storeroom which you will find answers every purpose, being practically a closed-in back porch. The bathroom is a very special feature—note that there is a separate compartment for the shower bath and a small closet besides. The three bed rooms are noticeably large, light and airy. One of these rooms opens onto the rear balcony. A shingled parapet surrounds this balcony giving better protection than an open balustrade. Don't overlook the cory den in the corner. Our estimate is based on selected clear yellow pine finish and floors for the interior. If you wish to finish in oak or any other kind of wood we will gladly submit figures upon request. All the material is of standard manufacture and Strictly Brand New. A good quality of beveled siding is furnished for the main walls below the cemented gables.

7 ROOMS, BATH AND
RECEPTION HALL.

ONE of those Special Designs—made to order as explained on page 48—which has so many points to commend it that we found room for it in our plan book so that home builders everywhere would have an opportunity to consider its admirable features. You can get the complete set of Blue Print Plans and Specifications free as fully set forth in the introductory pages.

A full two-story house of seven large rooms, bath, reception hall and vestibule, open stairway, upstairs hall, pantry with a refrigerator compartment, lots of closets, a front porch and a rear porch—also a balcony overhead. The upper half is shingled, the lower part veneered with cement. The tower on the corner stands out prominently, lending distinction to the appearance. The cornice at the eaves curves out with a wide sweep—there is an outward bend at the belt line; these and the front porch with square, paneled columns, and the set-out triple art window—hooded and bracketed—in the dining room, give an air that is extremely artistic. Inside is an arrangement pronounced perfect. Study the plan and see if you do not find in it the solution of many domestic problems. Can you suggest any improvement in the living room with its fireplace, seats around the angle in the corner and square-pillared colonnades in the doorways? Or do you know any better plan than to have a stairway which can be reached from both sides—as shown in the floor diagram—furnishing means to go up and down to and from the kitchen direct as well as from the reception hall? Possibly you do and you may have an idea which you would like to have elaborated by the skilled designers of our Architectural Department. We will gladly co-operate with you in the matter. The first step—after posting up on our Special plan proposition (see page 48)—is to write us, detailing your ideas, needs etc., in a comprehensive manner so that we may handle your case intelligently.

Now it may be that this plan will need only a little alteration to answer your requirements—we will be glad to confer with you on any point in this connection. There are four chambers and a bath room upstairs. The bedrooms are all of good size. An open balcony sets off from one of the back bedrooms. Out of this same room runs the stairway to the attic which is floored—material for this purpose being provided for in our estimate. Other extras furnished by us are the colonnades, linen cabinet, medicine case, mantel shelves, plate rail, seats, floor bin and even the partition lumber for the basement and lath for the walls of the laundry are included in our price on this particular design.

The figure we have put on the material is very low especially when you take into consideration the quality of the stocks offered. Everything furnished by us is guaranteed strictly Brand New and first class in every respect. Washington cedar shingles are used for the roof and sides; select quality of outside finish and clear Yellow Pine throughout the interior.

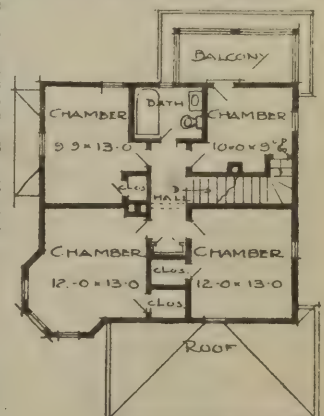

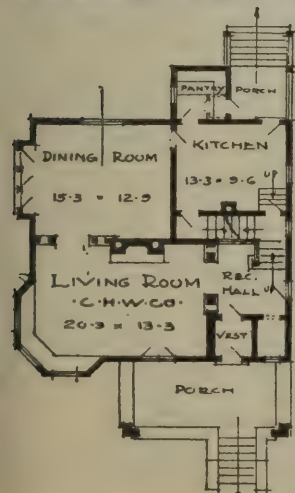

This plan is specially adapted for putting in an up-to-date heating plant and plumbing system. Our offer on equipment should not be overlooked.

8 ROOMS AND BATH.

THERE is a quiet dignity about this house—a sort of stateliness—which strikes one at first glance. It is adapted from one of our regular designs—No. 138, published on another page—and special plans were drafted for our customer, a gentleman from Nebraska, who came into our office one day not so very long ago, with just a rough sketch of what he wanted. When he left our place, two days afterward, he carried with him the complete set of Blue Print Plans—made special for him while he waited—and we had his order for the house material and a big barn bill besides.

A considerable change has been made from the original plan as a comparison will show. This is more of a house in every way—wider, longer, higher—and has a number of additional conveniences. An exceptionally large porch extends across the front; round colonial columns, 10 inches in diameter, support the roof, wide steps lead up to the front door. The front door itself is a good, big door glazed with extra long glass and opens into a vestibule chamber which gives entrance in turn to both living room and dining room. There is a large bay window in the dining room; this is the largest room in the house and is connected by sliding doors with the living room. Throwing these two rooms together gives plenty of room for entertainment. The kitchen is large and opens out on a small back porch. This design, being planned to meet special requirements, has some features which may or may not suit your own individual needs. Note that the floor plan shows no pantry; instead there is a cupboard built in the wall between the kitchen and dining room, which is double-faced, opening on either side. You will notice also the bath room laid out on the lower floor, the arrangement of the stairway leading up from a back hall, and the small bedroom in the far corner. All this is susceptible of change if you desire something different. You can have your pantry where the bath room is shown, with door from kitchen instead of the hall. You could do away with that hall altogether and have a larger room on the corner. You could change the stairway to the living room side.

The second floor plan shows a large closet right at the head of the stairs, convenient for use as a store room. There is an extra room for bath on this floor which could be fitted up as lavatory or with complete set of fixtures. Four bed rooms on the upper floor, each with a closet, complete the arrangement.

This type of construction makes for solidity. When built this house will be the strongest kind of structure. Brand new, first-class material of guaranteed grades is furnished on our estimate. The customer for whom this plan was made was a careful buyer and examined everything thoroughly pronouncing himself well satisfied with our goods in every way. Because of its compactness you can heat the entire house economically. If you are not ready to put in a complete heating plant, the arrangement is well adapted for stove heat, the closed off stairway making it possible to confine the warmth to any part of the house. We can furnish you with Plumbing and Heating equipment at remarkably low cost. Read our offer below

9 ROOMS, BATH AND
RECEPTION HALL.

HAVE you read our Special Plan Proposition on page 48? This plan shown here was made to order to suit individual needs. The sketch shows a big square house with a great big porch the full width of the front and extending back on both sides. The floor plans show an arrangement having many unusual features. The ideas developed herein may be identical with your own. We now offer you the plans for this design under our Free Plan Offer explained on page 4. Send today for complete Blue Print Plans, Specifications, Material List and full information regarding our proposition. Consider well the low price we ask for the material, all of which is Guaranteed strictly Brand New, first class. Remember you are not buying "Wreckage" when you deal with us. It is only the price that is wrecked.

This house presents a very picturesque appearance. The upper part of the walls is shingled; the lower part is weather boarded. The top sash of the windows have square, divided lights, harmonizing with the general plan. A triple-sash dormer set on the front slope of the roof aids in beautifying. A projection or set-out with heavy brackets underneath and a shingled cap appears on one side just at the main stair landing and is glazed with three artistic leaded sash. Pass inside and you find: First, a vestibule entry into the reception hall which takes you to the foot of the main staircase; next, you are within the large, cheery living room with its open fire and big windows. Now come the special features: The kitchen is practically shut off

from the rest of the house, a back stair providing the way for the maid to reach her quarters on the upper floor. Note that little passage entry which has a door on each of the four sides. One of these leads to the outside with four steps down to the grade line. Two of the doors open on either side to the dining room and kitchen respectively. The kitchen part is only one-story while the main house is full two-story. The den in the corner can be fixed up for the nicest kind of a cozy nook. The ceilings are all high, the windows are good sized and plenty of them—nothing cramped about these quarters.

This plan was adapted from our Design No. 131 as illustrated in another part of this book. It may be that some of our Designs with changes will make exactly what you want. Let us do your architectural work.

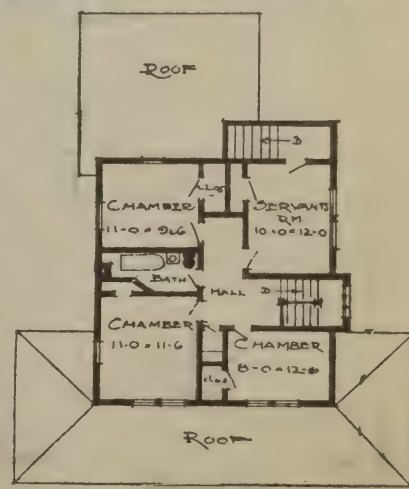

Our Plumbing and Heating Department will gladly confer with you regarding equipment. Their low estimates appear on this page.

8 ROOMS AND BATH

A SPECIAL Design for a house of concrete, planned to be built with rock-face cement blocks and roofed with shingles. If you are interested in learning how to go about having a plan made to order read our proposition on page 48. If the design as shown suits, the estimate given above covers all the lumber, all the mill work and all the hardware guttering, etc. required to construct this building according to plans and specifications and material list which we furnish free of charge if you purchase the material from us. We supply you from Brand New stocks every item guaranteed the best of its kind. We do not handle cement in any form but we sell one of the latest improved models of cement block machines at a price which defies competition. We shall be glad to send you descriptive matter regarding this machine. Cement in most markets is a very cheap commodity and if you build your own blocks and buy the balance of the material from us you surely will be surprised at the amount of money you can save. This house is almost a perfect square, without angles or projections. This arrangement means that you get the utmost space for the least amount of money. A successful attempt has been made by our designers to produce something above the average in looks. Notice the wide, curved-out eaves with finished rafters exposed beneath. Some art windows are used with good effect. The dormer in the roof appears to good advantage. An outside chimney on the living room side is a striking feature. Particular mention is due the porches both of which extend the full width of the house. On the front you see concrete columns of colonial design on top of square pillars and heavy balusters of the same design in the balustrade. Solid walls flank the steps leading toward the main entrance. The principal fault in the general design of cement block houses seems to be their cut and dried uniformity of appearance. Not so with this one—notice everything is in keeping with a solid massive stone design and whether built of smooth or rough blocks or a combination of both, the result will be equally pleasing.

A brief description of the interior follows: We find within that popular arrangement of reception hall, living room and dining room joined together by cased openings. The staircase, the open fireplace and the triple windows all go to make home life attractive. A separate passageway to the kitchen from the front is shown in the floor diagram. There also appears a down stairs toilet. There is a small coat closet in the back hall and the way to the basement is found here. We furnish material for the basement partitions, also stairs and floor for part of the attic where there is considerable space which can be utilized. The dining room has a swinging door leading to the kitchen and the plan herewith shows the buffet located against the wall on the pantry side. Upstairs is a fine arrangement of four chambers and bath room. The hall gives separate entrance to each room.

Light and ventilation has been exceptionally well provided for. If the design as shown suits, you can get the complete plans and specifications FREE as outlined on page 4.

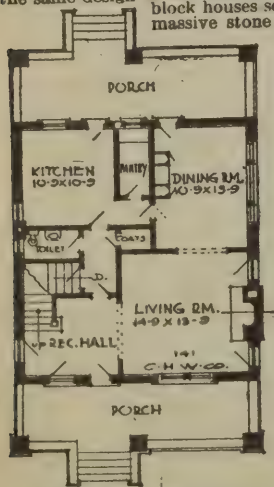

Don't forget that we furnish you with up-to-date Plumbing and Heating Equipment. Estimates given below.

10 ROOMS AND BATH.

An ideal plan. By following our plans and specifications and purchasing the material from us you can complete this truly palatial country residence at a cost that will not exceed what you would pay for an ordinary house built by the usual methods, or write to us, describing your needs, we will carry out your ideas. Our Architectural Department will draft special plans for you as outlined on pages 48 and 49 of this book. The first thing in the above design that attracts attention is the broad veranda extending across the front of the house and running back to the bay window—over 50 feet of porch. Seven large Colonial columns support the veranda roof. Spaciousness is the word that accurately describes the interior. Look at the floor plan of the living room, more than 20 feet across. The vestibule entrance through a cased opening gives you

the full width of the house. There is also a double sliding door connection with the large dining room and an open stair case. The vestibule is lighted by the large glazed door and the casement sash of leaded art glass. There is a triple window in the front of the living room; another window at the side; three casement sash in a row, glazed with leaded crystal sheet, are set high up just above the wide stair landing. The large bay window makes the dining room a very cheerful place. The library or den on the opposite side of the house will have its manifold uses. The kitchen is one of the largest rooms. Here are the back stairs and the inside cellar way, a pantry with shelves and cupboard, a good size entry leading from the back porch which is a handy arrangement and will be useful in many ways, making altogether a combination which every farmer's wife will appreciate. Our material list in this instance includes a built-in sideboard, our Aurora Design—with shelves, drawers and leaded glass doors for the dining room. Other features are the linen cabinet and the extra closet in the hall upstairs, the outside cellar way and the two shelved closets down stairs. The back bedroom with the little sewing room adjoining will be appreciated. Five bedrooms in all, each provided with a closet. The bathroom is conveniently situated and accessible to all parts of the house. A triple sash dormer ornaments the roof. There is room in the attic which can be utilized, with small expense. The back porch can easily be screened in, if desired.

In conclusion, we would suggest that, if you contemplate building a house of this character, you should investigate our proposition. We are justly proud of the position we occupy as champions of the consumer's right to buy as cheaply as the law of supply and demand makes possible. First class material is furnished throughout—red cedar shingles, beveled siding, No. 1 frame stuff, select cornice lumber, "A" grade doors and windows, clear yellow finish and floors—in fact, the best of everything.

7 ROOMS, BATH AND
RECEPTION HALL.

AMONG the many Special Designs prepared by our Architectural Department according to the ideas of our customers, we have selected the one illustrated above as being well calculated to find favor with home builders. It is surprising to learn how cheaply some of these houses can be constructed, figuring on the basis of our estimate on material and allowing a fair margin for all necessary labor. A picture portraying only one view does not give you a comprehensive idea; words cannot adequately describe the appearance. You should send for a complete set of blue prints showing all four elevations, details and enlarged floor plans to properly inform yourself. In the introductory pages of this book you will find our Free Plan Offer fully outlined. With the plans we also send you specifications with full instructions and a descriptive list of the material. We furnish Brand New standard material throughout, everything the best of its respective kind and grade, sufficient quantities guaranteed. Architecturally speaking, this design is correct in every detail. The features of the main cornice are carried out in the porch roof and dormer. Those heavy brackets you see in the gable project just a little beyond the eaves with the long, curved-end face boards apparently resting on them making an appearance altogether pleasing to the eye. Extra large colonial columns grace the front porch. Shingles are used for the upper part of the outside walls above the belt course and the regular weatherboarding below. The proper combination of stains and paint will result in an artistic looking home. The living room is large, with double windows in front and a single side window and connects with the dining room and reception hall by means of cased openings; for moderate-priced homes of medium size this arrangement is the last word in point of comfort, utility and convenience. The dining room has a large bay window, making a well-lighted interior. Notice how handy the pantry is—between the dining room and kitchen, with a double entrance passageway connecting these two rooms. A special feature is the refrigerator room on the back porch, convenient to the kitchen door. Here you will have your ice-box doing away with the necessity of making room for it in the kitchen. Did you notice that little closet opening off the dining room? You can have this shelved and it will make an excellent place for some of your china. There is a separate passage to the kitchen straight back from the front door through a large closet which can be used for coats and wraps. A grade line door gives outside access to the basement. You get down cellar from the kitchen underneath the main stairway which is open and leads from the reception hall. The hall upstairs is "L" shaped and each of the apartments, including the bath room, has a separate entrance. One of the four bed rooms has a bay window the same dimensions as the dining room bay of which it is an extension.

Special: An unusual feature is the floored attic for which our material list provides in this particular design. The second floor plan shows the attic stairs out of one of the front bed rooms. Light is provided by the dormer and gable windows.

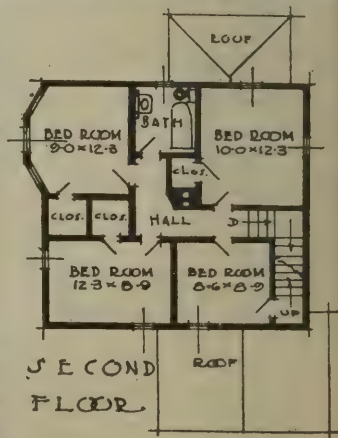

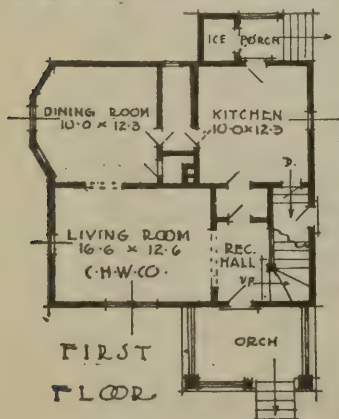

Don't overlook our low cost estimates on Plumbing and Heating Equipment. The arrangement of this plan is good for economical installation. Plans will be furnished under our regular free plan offer as outlined on introductory pages of this book.

6 ROOMS, BATH AND HALL.

NOT finding his kind of a house in our plan book, a Missouri customer sent us a sketch of what he wanted (see Special Plan Proposition on page 48 of this book) and our Architectural Department made to order the plans and submitted an estimate on material. This man came right in to see us and we went over all details with him in person and showed him our stocks. He was convinced; before he left our place the order was on our books. Since the house was built such flattering reports have come in that it was deemed advisable to publish the plan, presented herewith. Our customer writes us: "I now have the best house in this county and people come from miles around to see it." So much by way of introduction. You can now get the complete blue print plans and specifications for building this house under our Free Plan Offer described in the introductory pages of this book.

This is an up-to-date home of the bungalow type—not a summer house nor a mere shell—and is built to withstand the rigors of a climate where protection is needed against winter's chilling winds. In summer, the wide porch—surrounding one entire corner of the house—will be appreciated. This certainly is a beautiful home. The roof over the main part slopes gradually down, curving out at the wide eaves, and continuing on with graceful bend, forms the covering of the porch. The cornice is of the style known as rafter finish, the exposed rafters making a very pretty effect. The regular weatherboarding is used for the outside and Washington cedar shingles for the roof. Paints or stains, properly used, will aid to further beautify this home. The six columns of the front porch are of large diameter and are set on piers. All of the windows have upper sash, with divided lights—a recognized feature of many artistic residences. The outside chimney is another feature.

Proceeding inside we come at once upon the most picturesque scene. The wide living room with windows half-way across, the beautiful colonnades filling the openings to the den and to the dining room; the charming little den with its open fireplace, its inglenook and casement windows of leaded art glass. A beautiful design, you say? Yes, and a home, too, as we understand the meaning of the word. Who wouldn't enjoy just such a home?

In addition to the regular bill of material our estimate provides for a number of extras—not usually furnished. In this particular case we include two colonnades, with columns and pedestals, dining room buffet with leaded sash doors and beveled plate mirror, kitchen cupboard, medicine case, sink cabinet, seats and other miscellany. The dining room is large and well-lighted, a swinging door connects with the kitchen. The rear porch is latticed in. One noticeable feature is the entire absence of dark corners—you can literally flood the rooms with light. The means of ventilation are exceptionally good. You can heat the whole house quite cheaply. If you put in a furnace or heating plant the fireplace will not really be needed except to throw out good cheer. Our low estimates on heating and plumbing equipment are given below.

Clear yellow pine finish is furnished throughout. This stock is thoroughly seasoned and specially selected; is suitable to any style of finish—stain, varnish, paint or oil. Estimates on oak or other kinds of trim furnished upon request.

**7 ROOMS AND BATH IN
EACH APARTMENT**

IN the above we show a two family house, size being 37 ft. 6 in. wide by 43 ft. long, exclusive of the porch. Each side has seven rooms, bath and pantry. There is a large front porch that can be divided for each tenant if desired, for the entrance is made through separate vestibules, each connecting directly with the living room.

The house has an attractive open stairway in the living room which is connected with the dining room by a large opening. The dining room and kitchen are nicely arranged with a pantry between, also with another small room in the rear, which can be used for either bath, bedroom or storeroom. On the second floor we have three bedrooms and bath with closets for each.

In designing this house, it has been our aim to avoid as far as possible the appearance of a tenement house which is objected to by many people. In exterior appearance it gives the impression of a private residence and in that respect greatly enhances its renting value.

The low price at which we are selling the material required for the construction of this design makes it possible to build this house at a cost to insure a good dividend on the investment. It is modern in design and conveniently arranged and will make a profitable investment in almost any locality.

The material used in the construction of this design as in all of our houses is of first class stock, strictly in keeping with the general character of the design.

It is our constant aim in drawing our plans and developing them to avoid as far as possible expensive and impracticable construction and so reduce the cost of the building to a minimum by eliminating all waste. The character of the material used in the construction of this as in all other designs is correct and practical and will be found described in the preceding pages of this book, and we refer you to our Free Plan Proposition as outlined and solicit your inquiries.

6 ROOMS AND BATH Up.
5 ROOMS AND BATH Down.

HERE is a good investment—a two-family residence with a full set of living apartments on each floor; nothing about the appearance from a front view to indicate that it is used in this manner. Many persons object to building two family houses on account of the appearance. Not so with this design. In no way has it the appearance of anything except a substantial residence. It will rent faster and at a higher price than any ordinary double house. The two floors are identical in arrangement with the exception that, the space upstairs over the vestibule at main entrance and reception hall adjoining, is used for a small bedroom.

The front porch is of good size, the same width as the house and large enough to be enjoyed by both families. At the rear there is a double porch, or, more correctly speaking, a porch with same sized balcony over-head. The plan shows an outside stairway for the convenience of the family upstairs. Entrance to the basement is gained under the back porch.

Both living rooms are large and well lighted; the dining rooms also are of good size and with plenty of light. These rooms are connected by means of cased openings, a very desirable feature. All bed rooms are provided with closets. Each kitchen has a pantry and the pantry is properly located where the light can penetrate.

This makes a house of somewhat pretentious looks. The large gables with wide cornice and projecting eaves lend an air of dignity. The plain colonial columns surmounting the stone piers at the front are in keeping with this style of construction.

When first planned, our designers had in mind a large country home, capable of accommodating a good sized family, but we found that only a few changes were needed to effect a radical transformation of the inside arrangement to accommodate two families and believing that the idea would find favor with many, our architects were instructed to convert this house into a two-flat building. Should you prefer the original plan and are interested sufficiently to write us about it, we will be glad to show you how this house can be made into a fine country residence.

By purchasing your material from us and building according to our plans and specifications you will be able to complete this house at the minimum of cost. We furnish you new lumber of standard manufacture and guaranteed grades. Interior finish is of clear yellow pine, carefully selected. The inside doors are all pine with cross panels of clear yellow pine. Our price includes of course all the necessary hardware. The style of the finish is the popular Antique Copper.

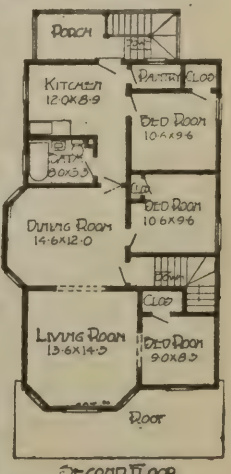

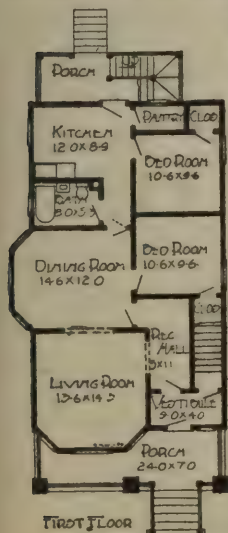

The arrangement is specially adapted for the installation of the plumbing equipment, bath room fixtures as well as the kitchen fixtures are planned for convenience and economy of installation. Full explanation of our Free Plan Offer will be found in the introductory pages of this book. Send for the complete plans and specifications and learn all about this house.

6 ROOMS AND BATH
IN EACH APARTMENT

IN the above design we present a double flat building which has the appearance of a palatial private residence. Size 30 ft. wide by 42 ft. deep. There is absolutely nothing about this design that would stamp it as a flat or tenement house. The large front porch extending across the entire front of the house is roomy and comfortable, yet the single door entering into the house gives no indication that this is used for two family purposes.

The Colonial windows in the front of the house make an imposing and attractive appearance and the pilaster running up to the eaves on the front add to the general attractiveness of the design.

The interior arrangements are exceptionally convenient and modern. Each flat with its separate vestibule entrance is strictly private and has all the conveniences of a modern home on one floor. The living room, dining room and kitchen being on one side and the bedrooms and bath on the other, each side entirely independent of the other—this gives a privacy to the latter part of the house that is very desirable.

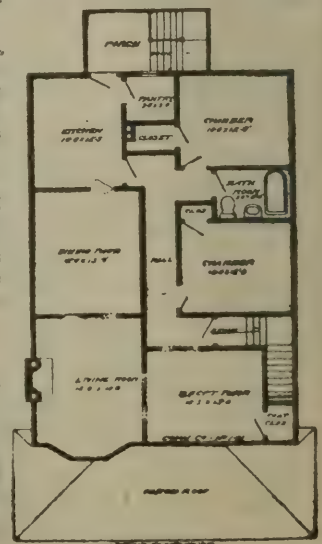

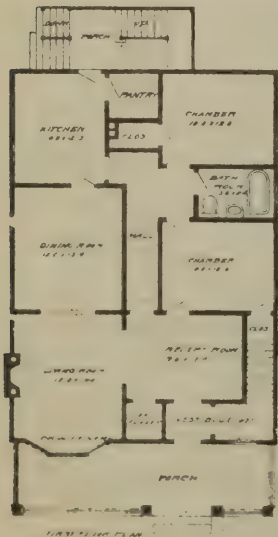

There is a large reception hall, living room and dining room, all being connected by cased openings which practically throws these rooms into one apartment. The chambers, bath room and kitchen are easy of access from the center hall, the pantry leading off the kitchen at the rear of the house. The back door opens on the rear porch which is covered by separate roof and gives to each tenement a private entrance to the back yard. The basement stairs being directly at the foot of the back porch makes it easy of access for both tenants.

EACH, 6 ROOMS AND BATH

OUR design No. 144, is a two-family flat designed for a money making proposition. It is 22' wide and 41' 6 in. long, not including porch measurements. Built on a moderate priced lot, this building will net fully 12% profit, on the investment.

Each apartment has 6 rooms, bath, pantry and the necessary closets. Every room is exceptionally well lighted and ventilated. Private porches are provided in front and rear, for each family.

On the whole, this design is exceedingly comfortable and convenient. By reason of its compactness, the cost of labor necessary for the construction of this building is comparatively cheap.

The material specified is of the very best quality, and will give satisfactory service.

The location of the bath-room and kitchen, reduces the cost of installing and maintaining the plumbing fixtures to the lowest price.

Rear porch both up and down are of good size and roofed over.

The price at which we are selling the materials necessary for the construction of this design, makes it an attractive bargain proposition. Any one wanting a comfortable home, and at the same time a fair income on the investment will do well to consider this proposition.

On pages 2 to 5 of our plan book, we give a full description of our free plan proposition, also of the quality of material entering the construction of house designs.

7 ROOMS AND BATH

IN presenting House Design No. 115, we are showing one of the very best and most practical semi-bungalow type designs, the result of careful study and work-out. It is a house that meets the requirements of those wishing to take advantage of all possible space as well as arrangement of conveniences. There is a growing demand for houses of this class for the reason that they offer the maximum of convenience at a minimum of expense. Here we have a complete house on one floor—dining room, living room, bath room, pantry and spacious closets all on the first floor. The dining room and living room can be thrown together and will make a combined room of 13x27. The chamber, with the bath room immediately adjoining, is a great convenience, which is readily appreciated. The kitchen is thoroughly modern, has a good-sized pantry, as well as an opening on the porch for receiving ice without the necessity of carrying same through the kitchen—which usually means that you have to stay at home and wait for the ice-man, and, when he gets through, wash up the floor. There is also a convenient entrance to cellar direct from the kitchen, enabling one to get to this part of the house regardless of weather conditions.

In this design, we have eliminated the reception hall and fancy stairway, following more closely European lines laid out along strictly common sense, sanitary and labor-saving ideas, but at the same time utilizing every inch of space. Through the living room we have direct entrance to stairway, also passage to chamber. The stairway leads up to second floor without a turn, giving entrance to the three rooms within easy reach of the landing. All rooms are well ventilated, have spacious closets set aside for each chamber with a window in each closet. The closets are exceptionally large, being about 7x5 each. The sewing room can be arranged as a child's room or as an additional bath room, being 7x11 in size.

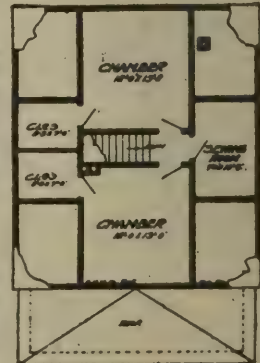

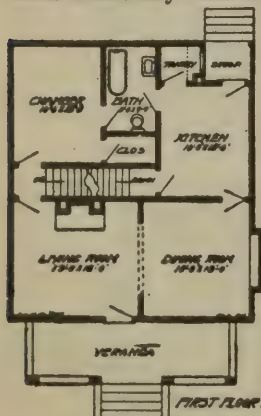

The general construction is modern, up-to-date and solid in every respect. Siding is used below the belt course as shown in the photograph, shingles above. A very artistic effect is gained by brackets supporting the overhang of the roof, with exposed rafters for the entire design. The outside wall is run down to within five inches of the ground, carrying out the general effect of the bungalow style and doing away with the necessity of expensive foundation. This design can be depended upon to be serviceable in every respect. It is easily and cheaply constructed and housekeeping within it should be a delight.

7 ROOMS AND BATH.

OUR Design No. 75 is of a popular style of construction much seen in the Middle West, compact, well-arranged and in external appearance bespeaks the solid and substantial citizen within; just the kind of a home for the couple who desire to take a well-earned rest and spend the balance of their days amid comfortable surroundings; with plenty of spare bedrooms for the scattered children when holidays come and reunite the family.

Our designers have given us in this house a carefully studied arrangement similar in appearance to, but not just exactly the same as the type which has long been in favor with a great many people. The price, considering the excellent quality of material figured is positively a bargain. The something different which we claim for this design is that it has been planned by men at the top of their profession, special regard having been given to economy of construction, economy in labor and material all combined with the advantages of convenient arrangement.

While the house is really a large one and one-half story design, yet the second story front room which is really the main bed room, has perfectly square ceilings 8 ft. 4 in. in the clear.

This design readily lends itself to changes which might suggest themselves to the prospective home builder; the porch could be made more commodious and the house made wider or longer to suit individual needs at comparatively little added expense. Many little changes or minor alterations might be made but in our opinion, unless more room is required, the arrangement cannot well be improved upon.

Come with us through this house. Upon passing through the large front entrance door we find ourselves within a well-lighted reception hall from which an open stairway leads to the upper floor. Our attention is first caught by the cased opening between the hall and parlor and you get a glimpse of another opening marking the separation of a parlor and dining room. At once you are given the impression of a spacious home with plenty of room, a delightful place for social gatherings and entertainment of visitors. Entering the parlor you will be surprised to note the fine view to be obtained from the parlor front windows, three in number. The dining room with its large projecting bay window is light, airy and cheerful, a condition much in keeping with the purpose of the room.

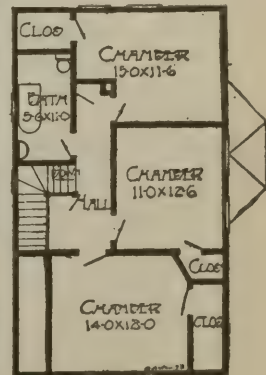

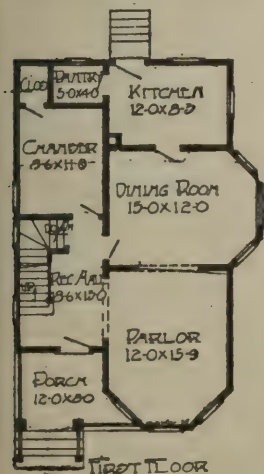

The kitchen has two good-sized windows and with the glazed door at the rear we have the right kind of ventilation and light so necessary to the busy housewife who spends many of her hours in this part of the house. You will not overlook the large pantry, of course. This house is also well provided with sleeping quarters, having three comfortably large chambers up-stairs and one smaller bedroom on the lower floor. This small room would make an exceedingly cozy den for the lord of the household. Any one of the upper rooms would make a really pleasant sewing room. Don't fail to notice that there is lots of closet room.

7 ROOMS

IN the above design we present a cosy cottage of pleasing effect, the size being 20 feet wide by 28 feet long and for its size it contains more available room than many houses of larger dimensions. The wide sweep of roof and large dormer make it practically a two story house. The roof extends well over the front and the heavy corbel effect on the front girders, in addition to the bulkheading around the porch, makes the design exceedingly attractive.

In interior arrangement the house contains all the conveniences possible for its size. There are three fair sized rooms on the first floor besides front hall. Entrance to the basement is effected through the kitchen directly under the main stairway. The main stairway is of open design and modern construction and lands directly in the center of the house on the second floor. The second floor has four bedrooms all good sized, with closets. One of these rooms may be converted into a bath room. All the rooms on the second floor have direct entrance to the hall.

The house is well lighted and ventilated and by reason of its compactness can very easily be heated by stoves or heater in basement.

By referring to the **Material Specification** Section of this book, you may gain a better knowledge of the class of material we furnish.

7 ROOMS AND BATH

IN our design No. 145, we have developed a house similar to our popular No. 6, but without the tower and the side bay windows. This is the result of many requests from customers and the design makes a neat, practical and substantial appearing house. It is entirely practical for a 25 ft. lot, size being 21 ft. 6 in. x 30 ft. It has many excellent features.

All rooms are of ample size and planned with a view to economy as well as usefulness. We enter a well lighted reception hall of good size with a handsome stairway to the right. Entrance to the parlor is had through a cased opening also to the dining room. This gives the entire first floor a cheerful and home-like appearance, adding much beauty to the general lay-out and great convenience. The dining room is well lighted, having two large windows on the side and one leaded sash window in the rear wall being of sufficient height to permit side-board to be placed underneath. The kitchen is of ample size with pantry large enough for all general purposes and entrance to the basement is had through the pantry, the stairway being directly underneath the main stairs.

We reach the second floor, landing in a well lighted hall, with separate entrances to all rooms, large closets, good sized bath room and a generally well laid out plan.

The entire house is well lighted, well ventilated and partitions are so arranged that the chimney can be placed to permit heating either by stove, furnace or steam heat.

One of the many features of this house is the convenient location of the bathroom, being directly above the kitchen, thus reducing cost of plumbing material as one main stack will do for both kitchen and bath room.

If the bath room is not desired, an additional room can be arranged in its place by moving a partition at no extra cost and this will give you seven good sized rooms and reception hall in this neat and practical house.

Our Blue Print Plans, Specifications and Material List will give you full and complete information with reference to size of the rooms, height of ceilings, style, quality, also catalog numbers and size of materials used in this design as well as in all of our other designs.

This design is entirely suitable for either country or city lot and as a home or investment should yield excellent returns as the price is certainly within the reach of all and in designing this house, not only has low cost of material been taken into consideration, but low cost of construction as well, without, of course, in any way sacrificing either the quality, strength of material or general design of the building.

6 ROOMS AND BATH

WE show here a design with a Mansard roof arrangement which is giving satisfaction wherever it has been built. The size is 21 ft. wide by 28 ft. deep, and with its six rooms, bath, and basement, makes a very complete and up-to-date home at a very low cost. The construction of this house enables us to utilize the space to the best advantage, and we believe that for its size it offers more conveniences than many larger houses. The stair effect for such a small house is striking and pleasing, going directly from the large living room into a hall on the second floor from which individual entrance is made to the bedrooms and bath.

Kindly note the large amount of closet room on the second floor which is unusual in a house of this size.

The first story and gables are intended to be furnished with beveled siding and the Mansard roof with shingles. The large Colonial columns on the front porch harmonize well with the general exterior appearances of the house.

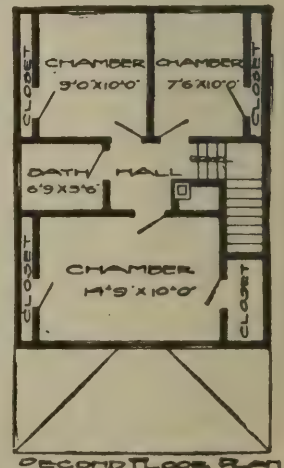

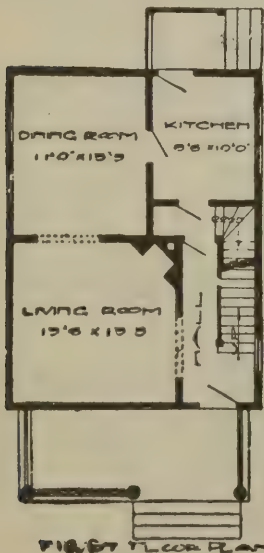

The material we furnish is all **Brand New** stock and in entire keeping with the general character of this design. We furnish free plans, specifications and bill of material for each one of our designs and we call your special attention to the "Material Specifications" and urge you to take advantage of our liberal Free Plan offer if you contemplate building.

6 OR 7 ROOMS AND BATH
Read Description

IN our design No. 127 we show a modest two-story house of exceptionally neat exterior. The octagon front surmounted by the tower and the roomy porch with its balcony over-head, make a pleasing combination that invests this design with a certain individuality which distinguishes it from the commonplace.

The size of this house is as shown with first floor plan 22' wide by 32' deep, and the price named above is for a house of this size.

We can, however, furnish this design with first floor plan "B," by which 8 feet are added to the length of the house and an extra room size 11' x 11' provided on the first floor, at an additional low cost of \$54.00 over the price quoted above. In adding this additional room, the rear of the house becomes slightly changed, the pantry then running the long way of the house and the bedroom closet being immediately back of the pantry. In ordering plans, be sure and specify clearly if you want first floor plan "B" or both "A" and "B" as we will be pleased to quote prices on both and no extra charge will be made for furnishing two first floor plans.

By using floor plan "B" this house can be used for a two family house, and the income from rent should be more than sufficient to pay all taxes and interest on the investment.

Our aim in developing this design was to produce a house to meet the requirements of that class of people, who from choice or necessity, do not keep servants, yet prefer a two-story house to the one-story cottage. By building this design as shown in floor plan B, a bed room is provided on the first floor, which is very desirable under some circumstances. In this way practically every convenience is provided on the first floor, and the arrangement of rooms and ease of inter-communication reduces the labor and care of house work to a minimum.

The heating of this house in winter will be found exceedingly economical, either by stove or furnace, as the location of the chimney in the middle of the house prevents waste of heat by eliminating long pipes and facilitating the diffusion of heat in all directions.

The second floor has three large chambers and bath room, and an abundance of closet space. The lighting and ventilating provisions are ample and complete. The windows are numerous and of adequate size, and are placed to insure the best results.

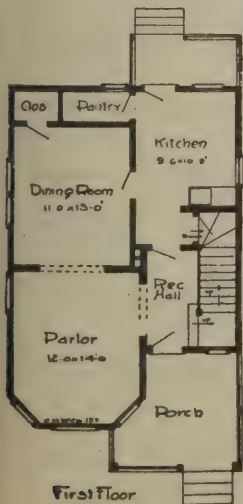

The materials we supply for the construction of this design are the same as for our best class of houses, and are fully described in our Material List furnished in connection with our Blue Print Plans and Specifications.

5 ROOMS AND BATH.

WE surely have hit the mark this time in our No. 90. This gambrel-roofed cottage with its four gables is bound to prove enormously popular. We have shown practically this same arrangement in former editions of our plan book and it has proven a good seller. Looking always to make a good thing better and acting partly upon suggestions offered by customers who have built from our plans, our designers made certain changes after giving considerable thought to the subject. We believe that in the modified plan we now offer the extreme limit of comfort and utility possible in a house constructed strictly along economical lines.

And it makes a good looking home, too. We can depend on our designers—practical and capable men, every one of them—to give us all there is to be had for the money in looks. Plain, unpretentious, it is nevertheless a little home of quite pleasing appearance. By our

plans we show you how this house can be constructed at a minimum of cost. From our stores of material we are able to work in some special lots, such as short lengths, etc., to good advantage and thus reduce waste and keep down the expense to the lowest point. Please understand right here that all materials covered by our estimates are Brand New goods of Standard Manufacture and Guaranteed Grades. Where we have the point of vantage is in our immense buying power and thorough knowledge of market conditions. All the difference is in the price.

The convenience of the front porch is apparent to even the casual observer. By having entrance from the porch to both living room and dining room the family gets that desired privacy in case of unexpected callers. Compactness is the main idea. Look at the floor plans, all straight lines, no bays or projections of any kind. For a small family of moderate means, where the woman does her own housekeeping, the arrangement is ideal. No open stairway, requiring an extra amount of care; no dark corners, where the light cannot penetrate; everything so handy and convenient that the house work will be a pleasure.

Not the least commendable feature of this plan is the economical installation of plumbing and heating equipment. The cost of maintenance will be nominal. You will find that you can heat this entire house for what it costs some families to keep one or two rooms warm.

Read carefully our Free Plan Offer in the introductory pages of this book. If you are interested don't fail to investigate. Our proposition means money in your pocket.

7 ROOMS

IN our Design No. 164 as illustrated above, we show a handsome, up-to-date cottage, of unusually neat design and a plan that means economy in cost of material and construction all the way through. The size of this design is 20' x 28', and while the rooms are somewhat small owing to the size of the house, they are considerably larger than many designs that are sold in other markets at nearly double the price at which we are selling the material for this design. This house is provided with every comfort and convenience possible, and is exceedingly cosy and complete.

The exterior is somewhat different than the general run of cottages. The front windows have divided lights after the Queen Ann style. The dormer gable is provided with a set of hanging rafters supported by brackets underneath, and the main cornice shows a departure from the conventional style by leaving every other rafter exposed. Around the porch, we show three columns placed upon a high pedestal with railing and balusters. The corbel effect over the posts and at each side of the front window is pleasing, as it gives the house a substantial appearance.

On the whole, this is a design that appeals strongly to small families of limited means, who prefer to own their property rather than pay rent. This house may be built at such a small sum of money that almost anyone can afford to have a home of his own. As an investment proposition, it offers attractive features, because it has the appearance of a much more expensive house than it really is, and will sell readily in almost any community at a good margin of profit above cost.

The materials we furnish for this design, as for all others, are strictly brand new stock of first-class quality, as shown by our Material List supplied in connection with our Blue Print Plans.

6 ROOMS AND BATH

THE above design is 20 ft. wide by 28 ft. deep exclusive of the porch and has been developed along the lines of a modern home and provided with every essential convenience possible in the limited space available. The front elevation shows a colonial pattern, the square paneled porch columns giving it an especially striking and handsome effect, which appeals strongly to people of good taste. There are three good sized rooms on the first floor, in addition to the front hall, and so arranged as to make communication between them especially easy. On the second floor, we have three bed rooms and bath, besides the usual closets. Also the large front room can be divided so as to have a child's room or sewing room by merely moving one partition and adding one door, the extra cost of which would not amount to over three or four dollars.

With a chimney placed in the center of the house, the whole house may be easily heated in the most economical manner either by stove or heater in the basement.

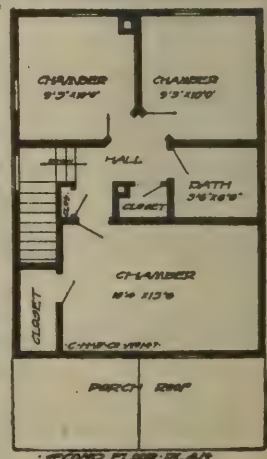

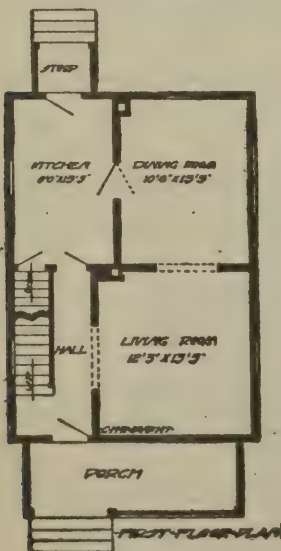

This design presents many features that appeal to people of moderate means as it offers many conveniences at a very low cost. The price at which we are selling the material for this design is exceptionally low and will enable anyone to secure a comfortable and modern home for very little money. The material we furnish is all strictly BRAND NEW with the quality in keeping with the general character of the design, and we ask you to kindly read our Material Specifications also our Free Plan Proposition as outlined in preceding pages.

6 ROOMS AND BATH

THE above design shows a comfortable cottage 26 feet square, not including porch measurements. This is a design that is especially desirable for many reasons, and on account of its compactness, ease of construction and of maintenance, is desirable either as a home for the individual purchaser, or as a Real Estate Dealer's or Builder's investment, who find it difficult to dispose of their vacant city or village lots. By reason of its simple construction it may be sold at a splendid margin of profit, and at the same time dispose of otherwise unsalable vacant property.

Everyone knows that a home built along square lines without a lot of angles, turrets, etc., etc., is much more economical to build and more economical to maintain and means little or no repairs for many years to come. As a home it has many splendid features. The first floor can be arranged in many different ways by simply shifting partitions, without increasing the cost of material or cost of construction.

The exterior construction of this design partakes somewhat of the Bungalow type. Every alternate rafter only, extends over the plate and is exposed underneath. The hanging rafters at the gables and front porch are supported by brackets as shown in the illustration. This departure from the conventional emphasizes the individuality of this design, while it effects a considerable saving in material and labor.

In selecting a home, most people want something a little different from their neighbors, something that, in a measure at least, gives expression to their conception of harmony or beauty. It may be but a minor detail, yet without this detail the Design would not make a favorable impression.

This design has four good sized rooms, two closets and a pantry, on the first floor and two additional bedrooms and four closets on the second floor. The front closet is large enough to be converted into a bathroom if desired. This would give the house every essential convenience.

The material to be supplied for this design is the same as for our better class of houses. The material list and Specifications will be supplied in connection with our Blue Print Plans, as outlined on a former page, will explain more fully.

**5 ROOMS AND
BATH**

IN the above, we illustrate a cosy cottage of five rooms and bath. Its size is 23 ft. 6 in. wide by 33 ft. deep, not including porch. It is of neat and pleasing exterior. The wide porch across the front gives it an air of comfort and coziness.

Though of moderate dimensions, the interior lay-out is convenient and comfortable. The location of the bath-room makes it easy of access from the dining room, kitchen or chamber. The main rooms communicate with one another by cased openings, thus adding to their roominess and comfort. A seat may be placed in the projecting bay window in the living room if desired.

This cottage is especially adapted to people of modest means and good taste. The price at which it may be built enables almost anyone to secure a home. Don't pay rent. The rent will pay for this cottage in a few years, and the natural rise in value of real-estate holding will net you a good profit. In the meantime, you will enjoy the satisfaction of living in your own home.

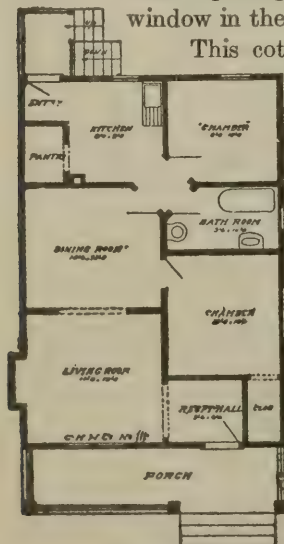

Read our Free Plan and Material Specification section and then write us for the plans. We shall be glad to make you a delivered price on the entire material required to build this or any other house in this book.

6 ROOMS AND BATH.

ANOTHER one of our popular bungalows, somewhat original in design and improved in many ways. By reasons of its simple outline and the entire absence of complicated details, this design may be built at a smaller outlay for labor than many houses of smaller size and more limited conveniences, while its general appearance is everything to be desired in a building of this class. This bungalow is designed to combine the maximum of comfort and convenience with a minimum amount of labor in caring for same.

Nor has the artistic been neglected. The illustration shown above is inadequate to convey the proper impression. The graceful sweep of the gable cornice, the wide eaves, the large porch and cross-barred windows all contribute their share in making a home of attractive outside appearance. This is a design that is popular in the south.

The entrance vestibule leads directly into the living room which is connected with the dining room by means of a large cased opening. These two rooms have the appearance of one large room and with only a few dollars expense you can have one of those handsome colonnades shown in our big catalogue. Thus the first impression received by your visitors will be distinctly favorable.

While all of the chambers are shown the same size on the floor plans, these may be varied without extra cost. The kitchen and bath room are of liberal size, being in marked contrast to the cramped quarters of many more expensive homes. Every room is well lighted and the ventilation is perfect.

Access to the basement is very convenient as you will note from the floor plans.

The quality of the material supplied for the construction of this design is the same as for our best houses, as specified in our Material Specifications and material lists supplied in connection with our Blue Print plans.

There is another thing about this house—and that is the splendid attic. With the addition of 2 feet to the outside studs raising the roof an equal number of feet there will be ample space for several good sized rooms.

There is a wide range of possibilities in further enhancing the outward beauty of this house by means of proper combination of colors used in painting the exterior.

For the amount of money expended you will get more comfort and convenience with a higher degree of satisfaction than in most any other style of dwelling that may be built.

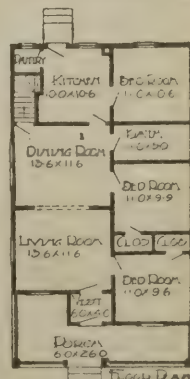

No trouble to heat this house. Our estimates on heating and plumbing equipment are exceptionally low.

HOUSE DESIGN No. 155

SIZE 24 FT. X 29 FT.

PRICE F.O.B. CARS **\$573⁰⁰**
CHICAGO
Write for Actual Delivered Price

6 ROOMS

IN our design No. 155 we illustrate a six room cottage with gambrel roof, in size 24 feet wide by 29 feet deep, not including porch measurement. There are four large rooms, pantry and closet on the first floor.

Though this house is but one story in height, the gambrel construction of the roof makes most of the space between the rafters available. In this way two large chambers and three large closets are provided on the second floor. By building a dormer in the roof, opposite the stair landing, which may be done at a very small extra cost, the center closet may be extended to the outside wall and become available as a bath room. This will provide this house with every modern convenience.

In external appearances this design could not well be improved. Attempts at ornamentation would merely destroy the salient lines and produce an effect of incongruity. The monotonous effect produced by large flat surfaces is recognized by experienced designers as fatal to any design, however expensive. To overcome this difficulty, lines must be broken. In this design the result is accomplished by the adaptation of the front porch. The irregular lines of the roof, the contrast of shingles and siding, the columns with cement blocks, stone or brick pedestals, the square balusters extending to the ground, all combine to relieve the effect of sameness that would result with the porch removed. In addition to this, due consideration must be given to the position, size and style of doors and windows, as they have a most important effect on the perspective.

Bearing all these details in mind, this design is correct in outline and proportion. Constructed after our plans and material list, this design will be found practical, convenient and exceedingly economical. The class of material is in every respect first-class, bright new stock, as described in our material list which we supply in connection with our Blue Print Plans, in accordance with our Free Plan Offer and Material Specifications as outlined in the introductory page of this Plan Book.

6 ROOMS

THIS neat and comfortable cottage has a capacity of six rooms within space of 24 ft. by 24 ft. and is very little higher than an ordinary one-story house. We are furnishing material to build this house as a winter house, including sub-flooring and boxing because it is a house that will meet the requirements of very many people. The window and door openings are trimmed with our plain mitered casing for paint work. For any who desire to use this design as a summer house we can omit the sub-flooring and boxing. On the second floor are two fair sized rooms with ample space for closets or store rooms. The first floor has large living room, two bedrooms and a good-sized kitchen. While the house is planned to heat with stoves with the use of

one chimney, this can be changed very readily and a fire-place put in between the two doors. We furnish nothing but new material in this or any of our house designs, all of which is fully described in our List of Material, which also gives our catalogue numbers on doors and windows, finishing material, hardware, etc. By the use of our Free Blue Print Plans and Material Bill, anyone who is in any way familiar with building can complete one of our designs.

THIS is a three room cottage of the gable roof construction. Entire width is 28 ft. and depth 25 ft. 6 in. with ample size front porch. Some people prefer a house of this construction, and it offers some conveniences, especially for one with only three rooms. This could be built without the convenience of the pantry if it is desired to cheapen the house. On the other hand the pantry is large enough to use as a small bedroom, or can be divided into a pantry and bath room—either of these changes we can make upon request.

We furnish this house regularly with our sub-flooring, boxing and shingles. Our interior trim is for paint work which we furnish in our plain mitred casing and moulded base. For slight additional cost we can furnish this in clear Georgia Pine trim for natural wood finish, either in mitred casing or with moulded cap heads over our pilaster casing.

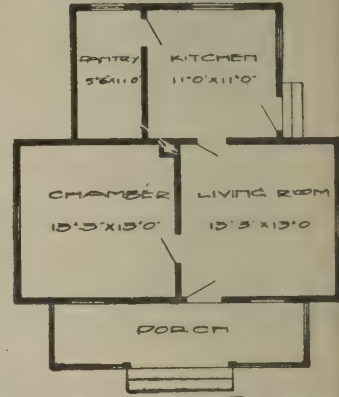

This house will also make a convenient summer house for sea-shore or lake, and we can furnish it with our Rubberized-Galvo roofing and drop siding, omitting the sub-flooring and boxing at a considerable less cost. Prices on such changes furnished promptly upon request.

DESIGN NO. 102-B

There is absolutely no waste space here, all the rooms being utilized to best possible advantage. Living Room is 13 ft. 6 in. x 11 ft. 6 in. Kitchen 8 ft. x 11 ft. 6 in. One extra large bed-room 13 ft. x 11 ft. 6 in. and the other 9 ft. 6 in. x 11 ft. 6 in.

We bestow the same care in the selection of suitable material in the small as we do in the large houses. Harmony of design and economy of construction are never lost sight of, and you have the assurance that everything has been worked out to the last detail. See below for prices on plumbing, heating and paint.

Design No. 102 illustrates a neat four-room cottage, size 24 ft. by 24 ft., for summer or seashore use. Drop siding without sheeting is used for siding purposes, and the roof, our famous 3-ply Rubber-Galvo or Raw Hide patent roofing, over dressed and matched roof sheeting laid solid. Of course, it is impossible in a house of this size or price to include all the modern conveniences so generally demanded in building construction at the present time. The design may be increased in size to suit individual necessities and the above is merely a suggestion of what may be done along this line.

Nevertheless this house is of neat design and so planned as to give every comfort that may be expected from a house of this size, whether used for a summer home or permanent residence in the form of our No.102 asdescribed below.

ONE STORY HIGH.

A STORE BUILDING designed for merchandizing in a busy neighborhood, large enough to accommodate a big stock of goods and plenty of floor space for counters, aisles, displays, etc. This plan shows a building 40 feet wide and 50 feet long with ceilings eleven feet in height. In a structure of this size it is necessary that provision be made to support the central part. Our specifications call for columns of solid wood, with steel cap and base, set squarely on piers of masonry and capable of sustaining a pressure of 4000 pounds to the square foot. There will be five of these supports running lengthwise with the room and stationed at even distances apart.

How can we furnish the material at so low a figure? Our wonderful proposition is fully explained elsewhere in this book but a word or two right here will not be amiss. You may not have a proper conception of our operations which cover practically the whole country. Not an opportunity is overlooked by our expert buyers where real bargains in standard goods are to be obtained. We take advantage of special sales—Receiver's sales, Bankrupt sales and the like—sometimes taking over a whole cargo of lumber. The entire out-put of a mill is a comparatively small purchase for us. In buying close we save you money. That's the idea.

Our Guaranteed Estimate includes all material required for the construction of this building according to our Blue Print Plans and specifications, with the exception of masonry material, paint, plumbing and heating. We furnish all the lumber, millwork (plate glass for the front included), hardware and roofing material. We specify quartersawn Yellow Pine Flooring which is well adapted for store floors and will stand a great deal of hard use. Maple floors can be had at a very slight advance. The best polished plate glass is used in the front. The doors on either side of the recessed entrance are of a special pattern, extra heavy, and glazed with polished plate. Material is provided for platforms to be built in the show windows. Three-layer, pebbled-surface composition roofing is used. Outside walls are beveled siding. Interior finish is clear Yellow Pine.

It is an easy matter to convert this building into two store rooms by running a partition through the center. The basement also could be partitioned off and a separate stairway put in. Otherwise the arrangement is complete for either a large single store room or two separate rooms. Although without costly embellishment or fancy ornamentation, this building nevertheless presents a rather attractive face because of its broad expanse of show windows and heavy cornice brackets.

The facilities for heat, light and ventilation are excellent. An estimate on different kinds of heating plants will be found below.

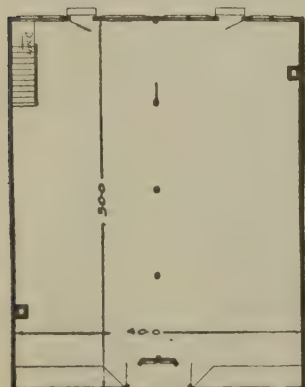

This building can be built either larger or smaller than the dimensions given above. Plans can be made to order for any desired size.

Our plans are very complete and any reasonably good carpenter, with the aid of our material list and specifications can build this design successfully.

Complete Hot Water Heating Plant	\$371.74
Complete Steam Heating Plant	339.95
Complete Hot Air Heating Equipment	91.35

We will furnish complete plumbing system from ground line up for this building, as fully described in our Special Catalog on Plumbing Goods. Our complete plumbing proposition No. 15 for **\$52.19**

Special Note. Complete, detailed specifications of above plumbing and heating systems furnished free on request. Paint for entire job, two coat work, including hard oil finish for interior (including porch floor paint, but no other floor or roof paint) **\$24.25**

5 ROOMS AND BATH
1 STORE Below.

SO many requests are made to us for something in the way of a building for business and living quarters combined that for this issue of our plan book our designers were instructed to prepare a plan to meet these requirements. The arrangement shown here provides for a store room covering the entire first floor with the exception of the stairway entrance, the space thus used serving a double purpose, affording also means of access to the basement.

On the second floor is a full set of housekeeping rooms, five in number, besides the large hall and bath. The upstairs arrangement may not be exactly suited to your needs and alterations can be made in the plan if desired. Should the time come when you do not require the upper floor for your own use, the property still will prove a good investment as it can be turned into a renting proposition with no change at all. Note carefully the plan. Each room has its own individual entrance from the hall-way. Use one or two of the rooms yourself if you wish and rent the others to transient or regular roomers. The passageway is private, having an outside door. The two floors can be kept entirely separate so the business of one need not be known in the other. You easily could cut off all connection from the store by closing up the inside door to the stairway and rent the entire upstairs if desired.

This building as planned is 22 feet wide by 36 feet long, all right for a twenty-five foot city lot. We can furnish estimates on any desired size and can arrange for plans and blue prints to suit. Our Material Specifications call for No. 1 framing lumber, a choice of weather boarding, clear quarter-sawn yellow pine flooring for the store and clear flat-grained yellow pine flooring for the second floor, "A" grade doors, No. 1 windows and selected clear Georgia pine finish for the entire interior.

The main entrance to the store is a large, heavy door, glazed with plate glass, placed diagonally in a recess at the corner of the building, giving practically the full width of the room for the front plate glass show windows. Another show window flanks the entrance on the right side. It is intended that this building shall occupy a corner lot which is always desirable, though not absolutely necessary. Changes as to front can be made to suit owner, but for low cost of construction and material the design as it is cannot be equalled. The rear porch is a double-decker for the convenience of both floors.

Economy is our watch-word and points of construction which would escape the average builder have been taken care of by our Architectural Department. Our list of material and blue prints will show fully the excellent and solid construction of this store. Send for the plans and let us tell you all about our proposition. Grasp this opportunity and protect your pocketbook.

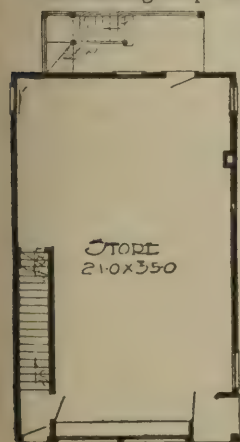

Attention is directed to our low estimates on plumbing and Heating Equipment, given below.

Hot Air Heating Plant \$124.10

SECOND FLOOR

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

Barns.

The barn is the farmer's workshop. It is as needful to his success as the store is to the merchant. The farm animals are his helpers. Proper housing, and adequate provision for their health and comfort, with a minimum outlay for feed and labor, will return as big a dividend as a well-built, well-equipped factory does to the manufacturer. A modern barn lends cast to the whole surroundings and enhances the beauty and value of the farm many times its cost. Do not be without one. Read what follows, then write us. We are at your service and can save you money.

In the following pages we illustrate a number of barn designs to meet the various demands of the American farmer and stock raiser. In developing these designs, we have followed the same careful methods in design and construction, as in our house patterns. Our aim has been to reduce waste to a minimum and select only such materials that will not only serve the purpose for which they are intended to the best advantage, but may be placed in position at the smallest possible cost. The old method of heavy timber construction is no longer followed by experienced builders and architects, because it entails not only an excessive and entirely useless expense, but is not susceptible to adaptation of modern requirements. For this reason we have adopted the built-up, or joist frame, design wherever possible. This method of construction is now generally acknowledged to be not only the strongest but cheapest as well, and it has advantages that are not possessed in the old style of construction formerly in use.

Free Plan Proposition.

The cost of preparing reliable plans, specifications and material by competent architects is a considerable item of building expense, and it often happens that the details must be worked out by the builder himself, for the reason that many architects are not familiar with local conditions. We furnish our customers with complete sets of drawings fully explaining the construction of every part of the building absolutely free. All that we require is a deposit of \$2.00 to protect ourselves from the merely curious, and when material is purchased from us we will credit you with the \$2.00 paid for the plans. We not only furnish the plans, but we furnish a complete set of specifications and a material list describing material and location, so that anyone reasonably familiar with building construction will have no difficulty in erecting any one of these designs. Our plans are made by experienced and practical men who have been in touch with building operations of all kinds for many years, and are familiar with conditions in different parts of the country, so that the plans are entirely practical.

Specifications and Bill of Material.

In our specifications we tell just exactly the quality of material that we propose to furnish for any one of the designs, so that a purchaser knows beforehand what he may expect to get. We make everything so plain that there can be no misunderstanding. In our list of material we specify the size and length of the various items, and state plainly the purpose for which they are intended, so that the builder will have no difficulty in selecting the material for the different kinds of work and thus avoid unnecessary waste and labor.

By our system of doing business we are able to effect a substantial saving for our customers. Our position in the market enables us to take advantage of every bargain proposition that presents itself. There are many manufacturers who are forced by business accidents to convert their goods into cash without delay to meet pressing obligations, or who have been thrown into the hands of receivers. We buy these stocks frequently at our own price and so are able to effect a saving for our customers of from 25% to 50%. Besides this, we furnish plans free. If you contemplate building, it will be to your advantage to avail yourself of our very liberal offer and correspond with us at once.

General Specifications and Description

Of Material We Propose to Furnish for the Construction of Our Barn Design.

Lumber.

Posts and Girders. We will furnish the necessary quantity of 2-inch material for posts, girders and braces shown on our blue print plans all of the correct sizes and lengths and of good grade, sound and square-edged, Southern pine.

Studding, Joists, Rafters, Etc. The required quantities of studding, joists, rafters, etc., are furnished in Southern pine in the proper lengths to work most economically and to the sizes shown on plans to insure the correct equalization of strength and symmetry.

Sheathing. For the roof, we furnish dressed and matched sheathing in all cases where our prepared roofing is used. The quality to be suitable for this purpose is more fully described in our list of material. Whenever shingles are used, we shall furnish square-edge Southern pine boards of standard widths and lengths surfaced two sides.

Barn Boards and Siding. In all of our joist frame designs, we supply barn boards of No. 1 soft Arkansas pine, 12 inches wide and of such lengths as are necessary to make a first-class job in every particular, and for the joists we supply 2½-inch O. G. battens. In the balloon type of construction, we supply 1x6 No. 1 soft Arkansas pine, drop or novelty siding, in sufficient quantities for the entire building.

Hay Loft Flooring. For the hay loft flooring we furnish 1x6 No. 2 Southern pine dressed and matched flooring in sufficient quantities to cover the floor as shown by our blue print designs.

Driveway Flooring. In our bank barn designs, where a driveway is shown through the center, we will furnish 2x6 dressed and matched No. 1 Southern pine flooring for driveway purposes.

Exterior Finish. All of the exterior finish, such as corner boards, fascia, frieze, etc., where shown on blue print plans, will be supplied in No. 1 Arkansas soft pine material in sufficient quantities to carry out the plan as shown by the drawings.

Roofing. All prices for these barn designs named herein are based upon the use of our celebrated 3-ply Rubberized-Galvo roofing, which we furnish in all cases unless otherwise ordered by customers. This is the best grade of roofing manufactured and is entirely suitable for the purpose and will give good satisfaction.

Shingles. Whenever requested, we shall be pleased to supply shingles for roof in place of the Rubberized-Galvo roofing. We can furnish Extra Star, A Star or 5 to 2 clear red cedar shingles or the usual grade of white cedar shingles, whichever may be preferred, at a small extra cost.

Galvanized Iron Roofing. We are in a position to supply, upon request, in place of our prepared roofing, galvanized iron roofing, either flat or corrugated, of our regular No. 18 grade in sheets 26 inches wide by 6 inches in length at a small extra cost.

Sash and Window Frames. We supply all window frames shown on the blue print plans and specified in our list of material in the "knock-down"

For all other frames, the material only will be furnished. We also furnish all the necessary sash and windows shown on the plans, glazed with double strength American glass. All in good, sound, No. 1 stock of the required sizes and quantities as shown on our list of material.

Door Material. For all the doors we furnish 1x10-inch stock for bottom rail, 1x6 for top, middle rails and stiles, and ½ No. 1 Southern pine ceiling for the panels. We furnish this stock in sufficient quantities to make the door of double thickness.

Hardware. We furnish all the necessary hardware, such as nails, all in the correct sizes for use in the different materials, also all other hardware such as hinges and track for doors as shown, hangers, hasps, butts and hooks for all barn sash. For double hinge windows we will furnish sash weights and sash lifts and locks and the necessary cord to hang the windows.

Galvanized Iron Work. Where valleys are shown on the blue print plans with shingled roof, we will supply the necessary galvanized iron of the correct widths and lengths for the valleys to insure a perfect job.

Interior Arrangements. We show on the various ground floor plans of the different size barns, arrangements for stable construction. These arrangements, however, are merely suggestions, as individual wants vary to such an extent that it is impossible to suit all classes of customers. We shall therefore be pleased to make whatever alterations that are suggested by individual requirements. The prices named in this book do not include material for interior stable arrangements, as this is a detail that can better be arranged with each individual customer.

RECAPITULATION. From the foregoing specifications and descriptions of material, it will be seen that we agree to furnish you with practically everything to build any one of these popular barn designs, including all lumber, sash, doors, glass, roofing, nails, hardware, galvanized valley iron, etc., everything of BRAND NEW stock. All grades guaranteed and backed by our binding guarantee.

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

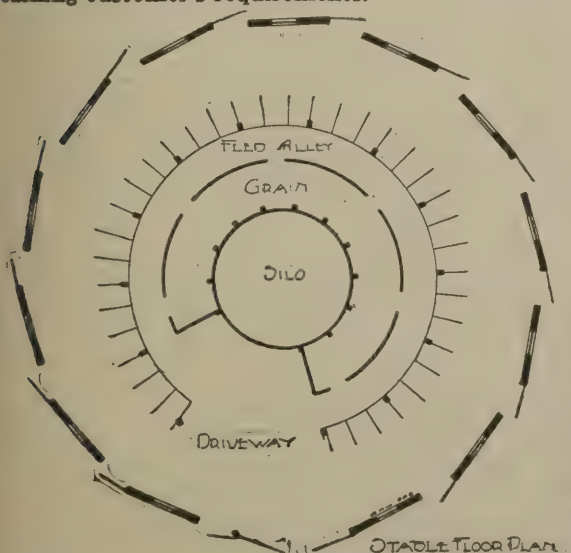

CHICAGO HOUSE WRECKING CO.
CHICAGO

BARN DESIGN No. 206

THIS barn is sixty feet in diameter and sixteen feet high to plate. It is not round but has **14 sides**, each side **14 feet**. This makes it possible to use all straight material and also reduces the labor cost to a considerable extent. There is a **16 ft. Silo** in the middle which is **36 ft.** high and will hold **160 tons** of silage. The hay capacity is **65 tons** and the barn is so constructed that no posts are required in the loft. Ventilators are provided around the silo which may be extended to the stable below. The large doors shown in the illustration will admit a load of hay or silage. The silo doors connect with this driveway, so that both the silo and the Hay Mow may be filled from the inside.

The stock capacity of this barn depends somewhat upon the arrangements affected. A five foot grain room may be built around the silo for convenience in feeding. Allowing four feet for a feed alley and facing the cattle to the alley the barn will accommodate 40 cows very comfortably. If the stock is not stanchioned and the grain room left out **80 to 100 head** of cattle may be fed in this barn. We are not including the feed rooms or stable material in our prices, but will name separate prices on this item after ascertaining customer's requirements.

The construction of this barn is of the simplest yet most substantial character. The outside studs are **2 x 8**, placed **24 inch** on center. They are tripled at each corner where they form truss and girder supports. Our Blue Print Plans give accurate details showing the manner of construction for every important part of the building. Any ordinary mechanic, who can read plans, will have no trouble in putting up this building when our plans are used.

The barn being fourteen sided is adapted alike for Drop Siding, or Barn Boards with O. G. Battens, Barn Boards and O. G. Battens cost a trifle more than Drop Siding.

The silo material will all be worked out to **Detail** and ready to put together. The staves are made of selected Yellow Pine Stock. The hoops are provided with a patent take-up device by which they always remain perfectly tight around the building, and need never be looked after. This is the **only successful device on the market that takes care, automatically**, of the expansion and contraction of Silos. The door Frame is continuous and constructed on a mechanically perfect principle, so that any door may be opened easily. We believe this to be the best Silo on the market and are confident it will give satisfactory results.

The roofing used is our **3 layer Pebble dash Rawhide**, which is guaranteed for ten years. At our price it is the cheapest roofing material that can be used and will give better results, dollar for dollar, than any other roofing made. We will furnish Blue Print Plans with full Details and descriptive list of the material for this barn for **\$2.00**, and if material is bought from us will apply money paid for plans on price of material.

PRICE, INCLUDING SILO.....**\$937.00**

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO

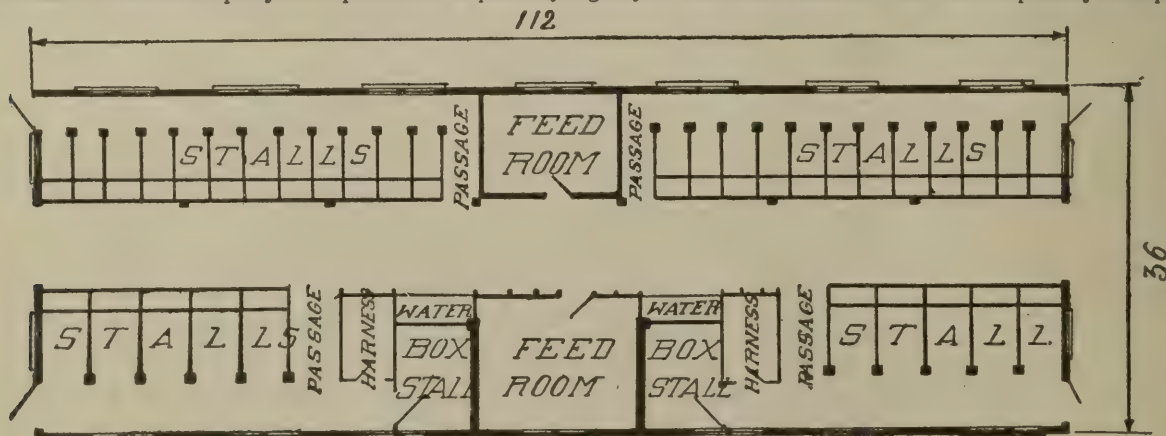

C. H. W. CO

"MAJESTIC" BARN DESIGN

SEE NEXT PAGE FOR F. O. B.
CHICAGO PRICES.
DELIVERED PRICES QUOTED ON APPLICATION.

OUR Majestic Barn Design, which was placed upon the market some months ago, is the most modern, up-to-date that has ever been designed. It is of the Joist Frame construction. That is, it is made up of built-up timbers. There is no heavy timber in the entire structure. The advantages of this method of construction are universally recognized for strength, rigidity, economy (both in cost of material and labor) and has the old style timber construction "beaten to a frazzle." The roof is of the self-supporting pattern, and doing away with all the posts in the hay mow, which always interferes with the operations of the hay carrier. The special advantages of this construction is the fact that timbers may be built-up of any length without weakening them at any point by reason of the joint or splices. The braces, girders, etc., are so placed that the strain is distributed equally at all points and a perfectly rigidity of the frame is assured that cannot possibly be equaled by

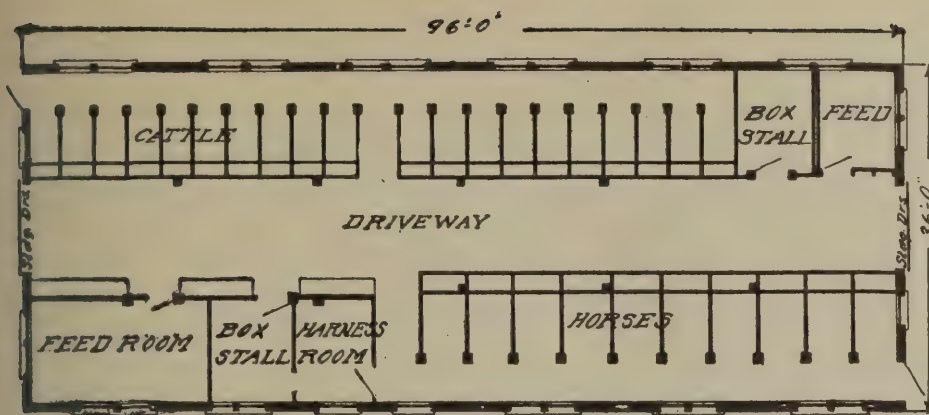

SUGGESTION FOR FLOOR PLAN MAJESTIC BARN NO. 225

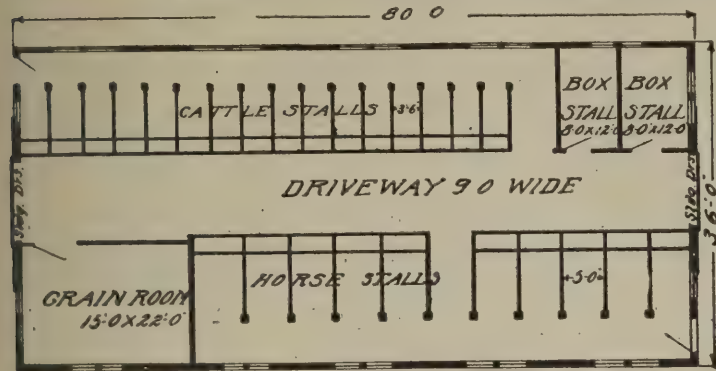

the old style timber construction. In addition, this style of construction gives the largest room for the size that it is possible to obtain there being no wast space anywhere. It is by all odds the most economical, cheapest and for general purposes, the best barn that a farmer can possibly put up.

We offer this Majestic design in various sizes of the uniform width of 36 feet. The stable ceiling is intended to be 8 feet in the clear with doors at each end and a driveway through the center of the entire length of the building, with the cattle and horse stalls arranged on either side. The stable arrangement shown for the various sizes have been designed with a view to economy of space and labor of feeding

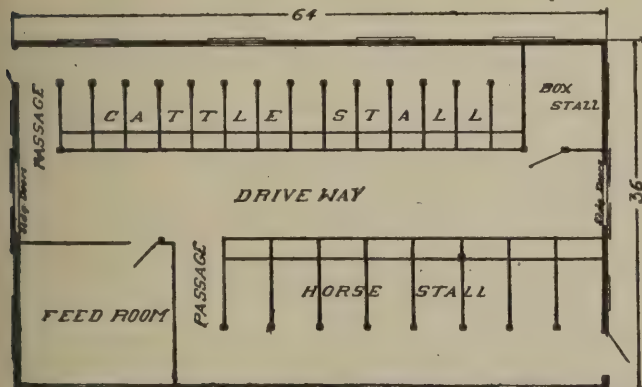

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

We will furnish you complete set of Blue Print Plans, Specifications and List of Material for the construction of any one of these sizes upon the conditions already outlined on a former page of this book.

the stock, but as it is impossible to anticipate the wants of all classes of buyers, we offer this arrangement merely as a suggestion and we shall be pleased to make whatever changes individual requirements may make necessary, and quote thereon.

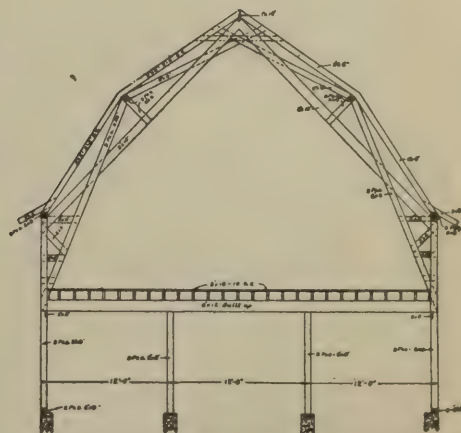

The entire upper floor of this barn is devoted to the storage of hay and other fodder and large doors are placed in one gable for the operations of the hay carrier. The barn is exceedingly well lighted and perfectly ventilated, which is one of the most essential features of the modern barn. To insure further sanitary conditions, this barn should be placed on a concrete foundation about a foot above the stable floor, which should also be made of cement. We furnish this design in the following sizes:

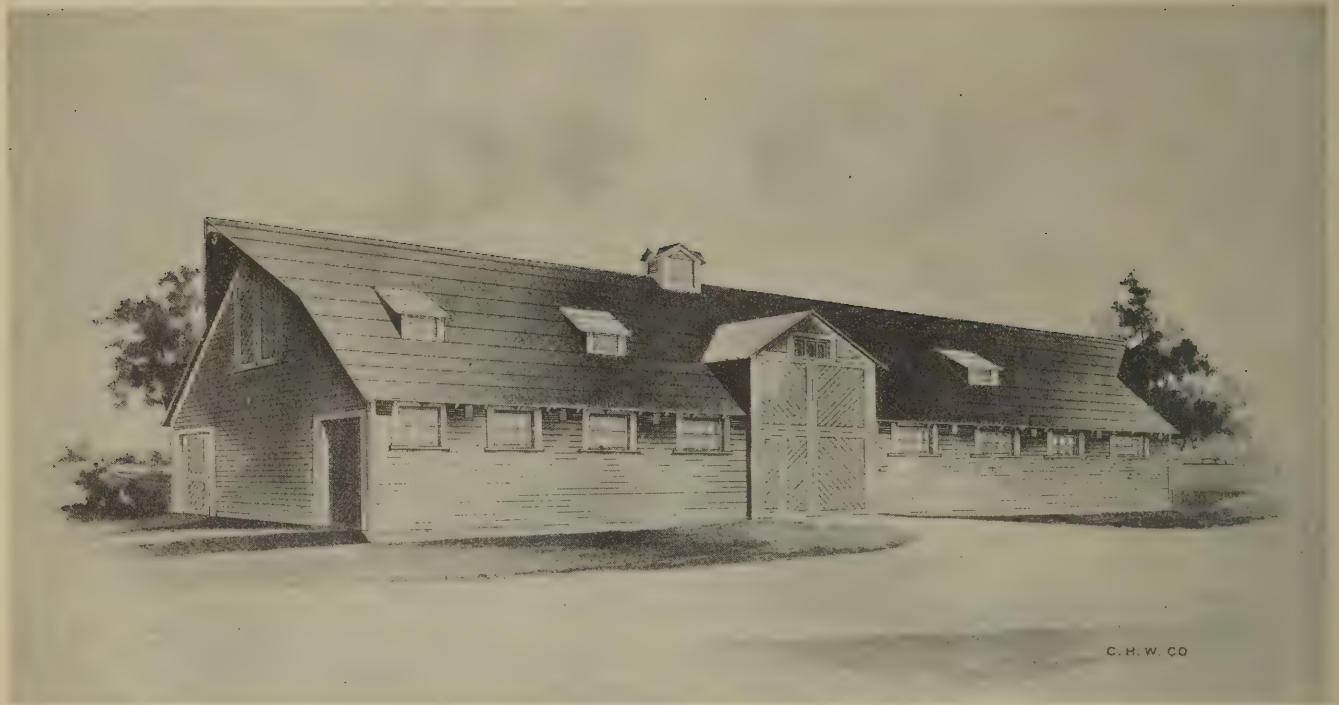

SUGGESTION FOR FLOOR PLAN FOR MAJESTIC BARN, No. 220.

CROSS SECTION SHOWING CONSTRUCTION.

C. H. W. CO

"STAR" CATTLE AND HORSE BARN

IN our Star Design we show a modern cattle and horse barn which we believe will meet the requirements of many farmers who make a business of raising stock on a moderate scale. This building is of the balloon type of construction as shown more fully by our Blue Print Plans. The hay-mow extends to the ground floor and also above the grain rooms on each end of the barn. Cattle stalls are arranged on one side of the hay-mow, while the horse stalls are arranged on the other side. The feed alleys between the hay-mow and stalls makes feeding economical and easy. These feed alleys communicate not only with the hay-mow out also

with the grain rooms at each end. A driveway is provided through the center of the barn, and if desired it may be carried through the hay-mow as well, which feature would, however, reduce the capacity of the latter considerably.

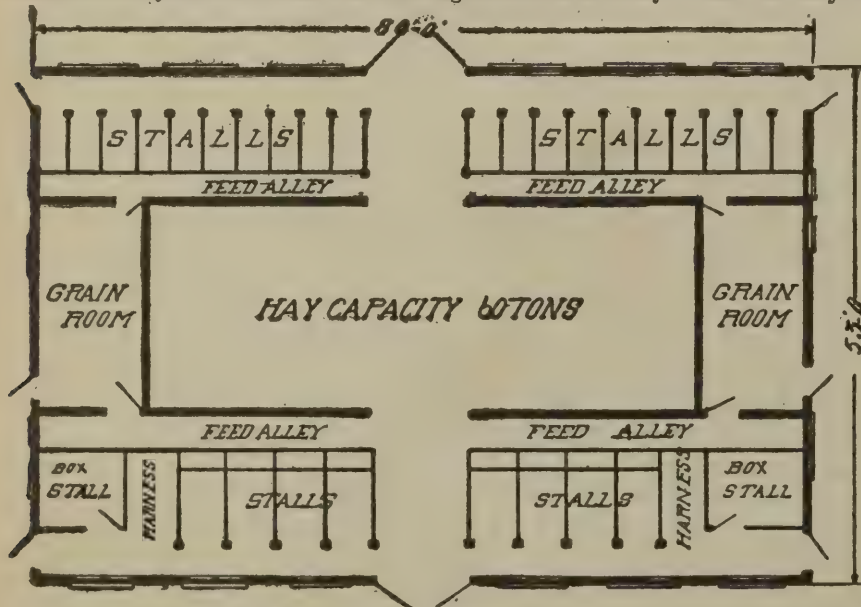

We particularly call your attention to the numerous windows shown in the ground floor plans. There is no part of this structure that is not amply lighted, and the windows together with the ventilation in the roof furnishes an ample supply of fresh air to every part of the building.

We list this barn in one size only, 53 feet wide by 80 feet in length, but if this size does not give sufficient stable capacity for cattle, a lean-to can be built at one end which will furnish sufficient room for fifteen additional head. In this case, the grain room at one end could be consolidated with the grain room at the other to provide for easy access to the stock at that end. In this way, a 12-foot addition at one end would furnish room for 35 head of cattle without interfering with the horse stalls as shown in the plans.

This barn should be placed upon a concrete foundation and the cement floor should be sloped towards each side so that the space devoted to the storage of hay could be kept dry and the stables kept properly drained.

The size of this barn as stated is 53 feet wide by 80 feet long, 8 feet to the eaves and 24 feet to the comb. Price, without stable material

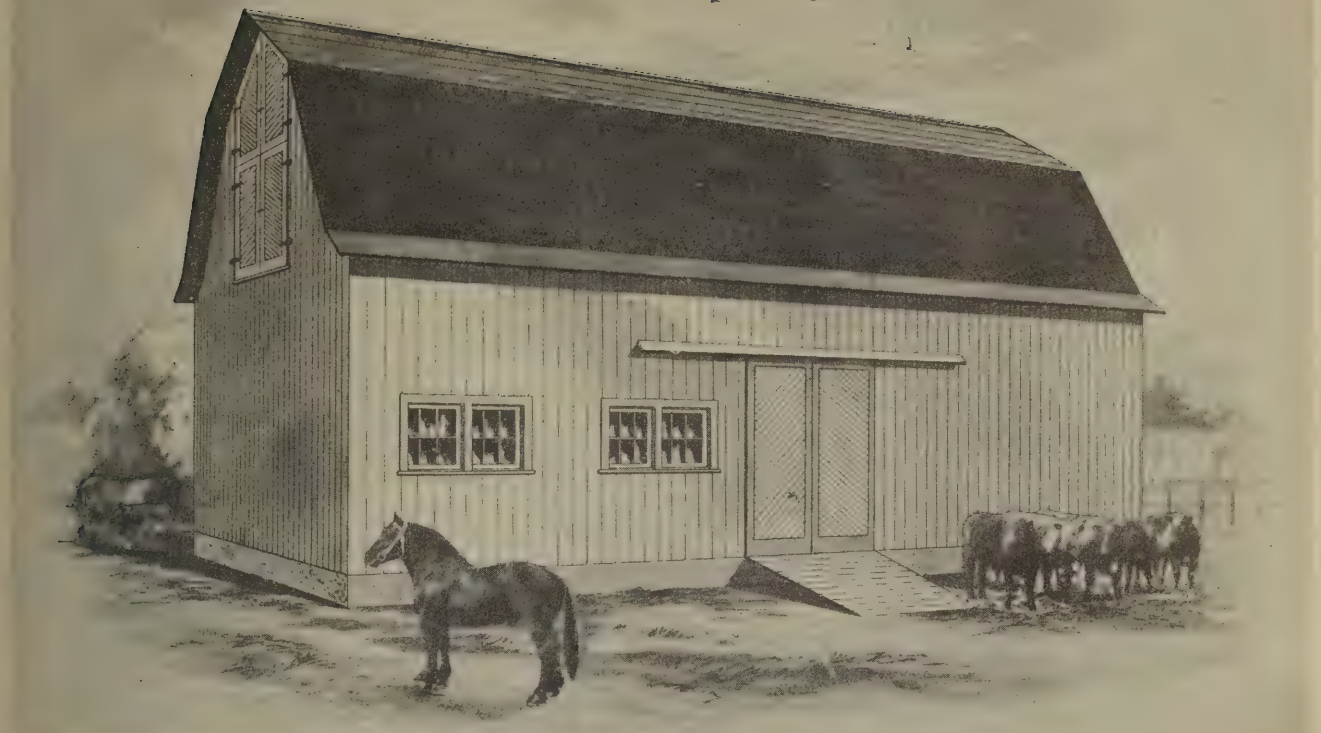

\$608.00

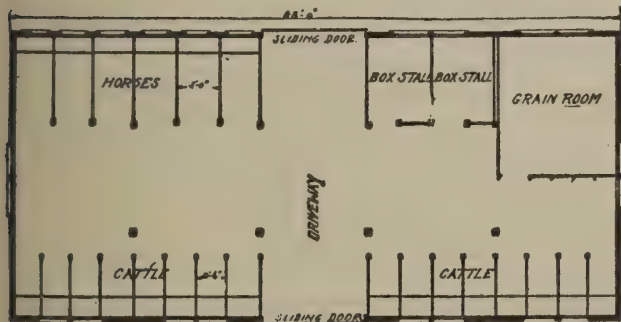

FLOOR PLAN

STAR BARN DESIGN N°270

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

OUR "SUPREME" BARN DESIGN

No. 212

THIS design follows the general construction of our "Majestic" design; is of the Joist Frame or built-up construction. This method of construction is now generally recognized by nearly all the Agricultural Departments of the various states, as it is not only much cheaper than the old-style timber construction but much stronger as well. In our Supreme design, we show a barn 32 feet wide, 16 feet high to the top of the plate, and of the various lengths shown at the end of this description. The stable is intended to be 8 feet high in the clear and the hay-loft extends the entire length of the building, giving a large hay capacity.

The driveway through the center of the barn, with the doors at each side of the building, makes it easy to bring fodder for the

stock. These doors may be changed to the end of the barn and the driveway may be lengthwise through the structure, if preferred.

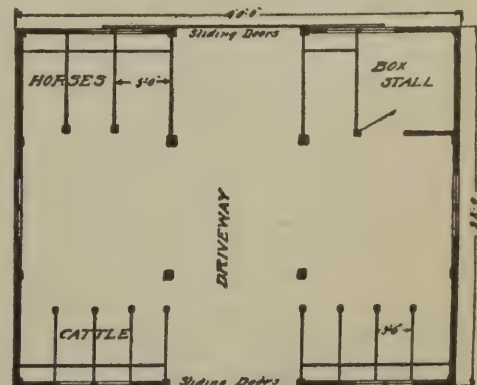

Inasmuch as this barn is only 32 feet wide, it will be more convenient to make the stock head towards the outside, as that will require less space than if they are placed with the heads towards the center, and our floor plans have been arranged with this end in view. This particular design is especially adapted to the small farmer where a large barn is not required, and we believe will answer every requirement of the modern up-to-date barn.

The building should be placed upon a concrete foundation extending about one foot above the stable floor. The latter should be made of cement and properly sloped to permit of easy drainage.

The material used in the construction of this barn is fully described in our Material Specifications on a preceding page, and, if interested, we shall be pleased to supply you with Blue Prints, Specifications, together with a full list of material in accordance with our Free-Plan Proposition as already outlined.

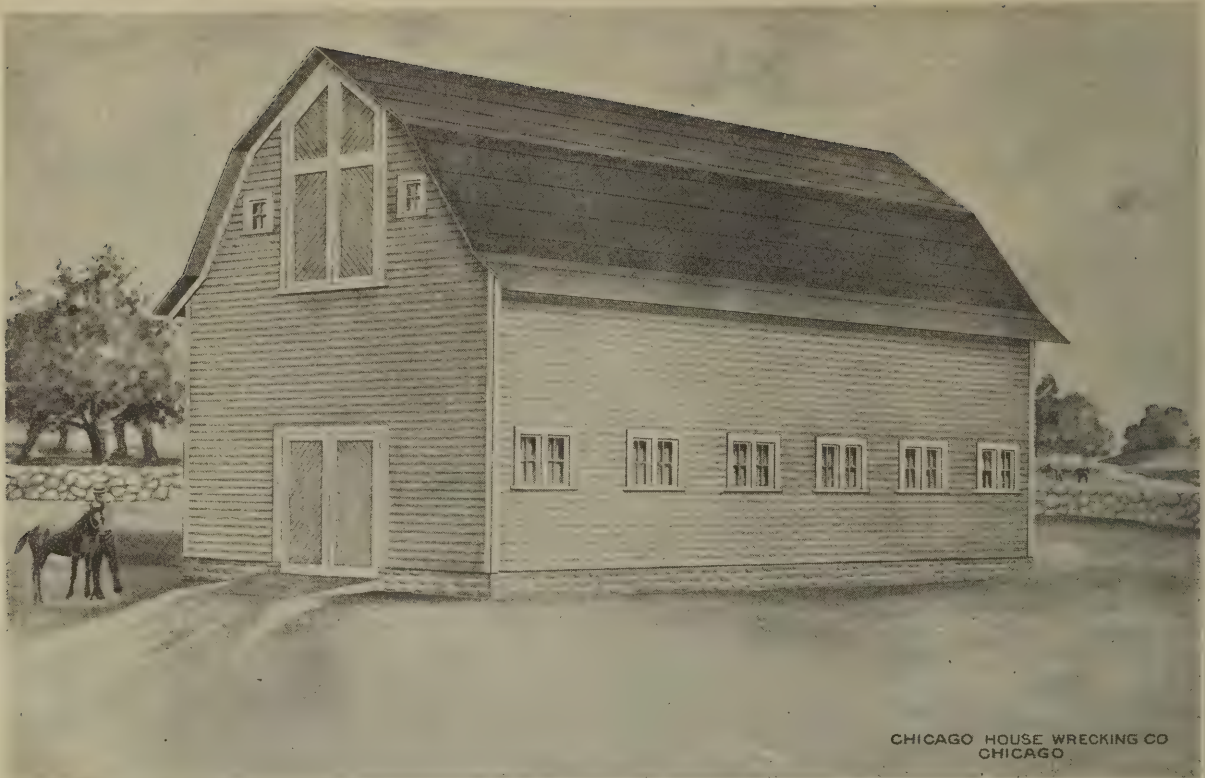

The various sizes and prices of this barn are as follows: Material for stable partitions not included.

Name	No.	Size	Height to Eaves	Height to Top of Roof	Price
"Supreme"	210	32x40	16 ft.	35 ft.	\$435.00
"	211	32x54	16 "	35 "	\$532.00
"	212	32x68	16 "	35 "	\$634.00

FLOOR PLAN
"SUPREME" BARN DESIGN
No. 210

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

HORSE BARN No. 250

IN the above design we show a barn 30 feet wide by 60 feet long and 18 feet high to the top of the plate, arranged exclusively for horses. This barn was designed for customers who do not wish to put their horses under the same roof with other stock. This is doubtless preferable in some cases. The floor plans show 12 single stalls of 5 feet each, and 6 double stalls of 10 feet each, and a ten foot driveway the whole length of the barn. Those who do not require all of this space for horses exclusively may divide this barn at one of the stall partitions, and use part of it for horses and the other part for cattle. By placing a sliding door across the driveway, the cattle may be as completely separated from the horses as though they were in a separate building. If this division is made in the center of the building, this barn will accommodate 12 horses and 18 head of cattle, or if this arrangement is not suitable for individual needs, one side of this barn may be turned into a corn crib and granary, and the other side used for stock. We shall be pleased to quote on any changes suggested by individual needs.

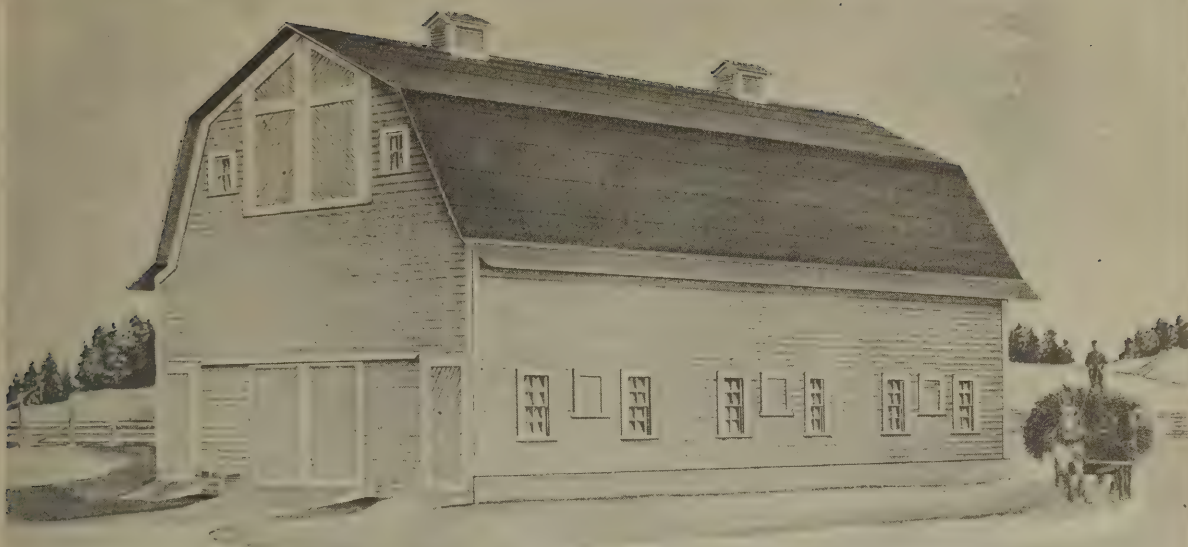

The foundation wall should extend at least 6 inches above the stable floor. We recommend the use of concrete in all cases for floor purposes whenever it is possible to secure the necessary material for that purpose. A floor of pounded clay may be advisable in special cases for horses with tender feet, but this soon becomes impregnated with disease germs, because of the difficulty of draining it properly, and is therefore undesirable from a sanitary standpoint. Plank floors are even worse than earth floors unless cement floors are first placed under them so that they may be flushed and properly drained. For these reasons we do not include plank floors in any of our regular barn bills, but can supply that material whenever wanted, at the very lowest market price.

This barn is sided with 6-inch drop siding, and the roof is covered with our celebrated 3 ply Rubberized Galvo Roofing. We shall be pleased to quote you on either shingles or Metal Roofing upon request. The hay mow extends the entire length of the barn, and has a capacity of about thirty tons.

We are including in the price above named all the material needed for stable partitions for this barn design as shown by our floor plans. The quality of the material is fully described in our material list supplied in connection with our Blue Print Plans, as outlined in our plan offer.

PRICE, INCLUDING STABLE MATERIAL..... **\$616.00**

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

CHICAGO HOUSE WRECKING CO.
CHICAGO

MODERN DAIRY BARN No. 226

IN the above we illustrate a modern dairy barn designed along strictly sanitary lines. The foundation wall extends 12 inches above the stable floor, and is built up 12 inches higher between the studding and over the wall plate. In this way the building is not only securely anchored to the foundation, but all the wood is protected from contamination with manure liquids. The floor likewise is of cement concrete finished in the rough. The mangers are also made of concrete, and are used for water troughs as well as feed mangers. They are so built that they slope slightly toward the middle of the barn, where a bell trap and overflow are connected to a waste pipe leading to the outside of the building to draw off the surplus water and drain the mangers.

Fresh air is brought into the barn through vents shown on the end elevation on each side of the sliding doors, and conducted through a concrete flue built below the feed way floor the entire length of the building. Perforated covers are provided at convenient distances apart, through which the fresh air enters immediately in front of the stock, so that it is always pure. Slides are placed on the inside of the intake flue to regulate the supply. The foul air settles to the bottom of the floor and passes out through ventilators placed in the wall in the rear of the cattle, and escapes between the inner lining and the siding, through the ventilators shown on the side elevation. In this way a supply of pure fresh air is always insured without the necessity of opening doors and windows. By making the floor and mangers of concrete, there is no wood exposed within two feet of the floor, and thus the sanitary conditions of the barn are practically perfect. By providing proper drainage, this stable may be flushed out with the hose, and so kept perfectly clean at all times.

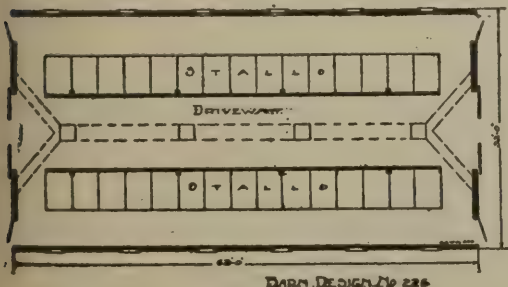

The studding is 2x6 placed on 24 inch centers. The barn is sided with 6-inch drop or novelty siding of No. 1 quality Soft Arkansas Pine, but box sheathing and beveled siding may be substituted for very little extra cost. The stable is 8 feet high, and is ceiled up on the inside and over head with 3x4 Yellow Pine ceiling. The hay mow floor extends the entire length of the barn, and furnishes storage capacity for thirty-five tons of hay. The illustration shows this barn design covered with our 3 ply Rubberized Galvo Roofing, and the above price is based upon the use of that material. We can, however, supply shingles or Metal Roofing, if so desired, at an extra price.

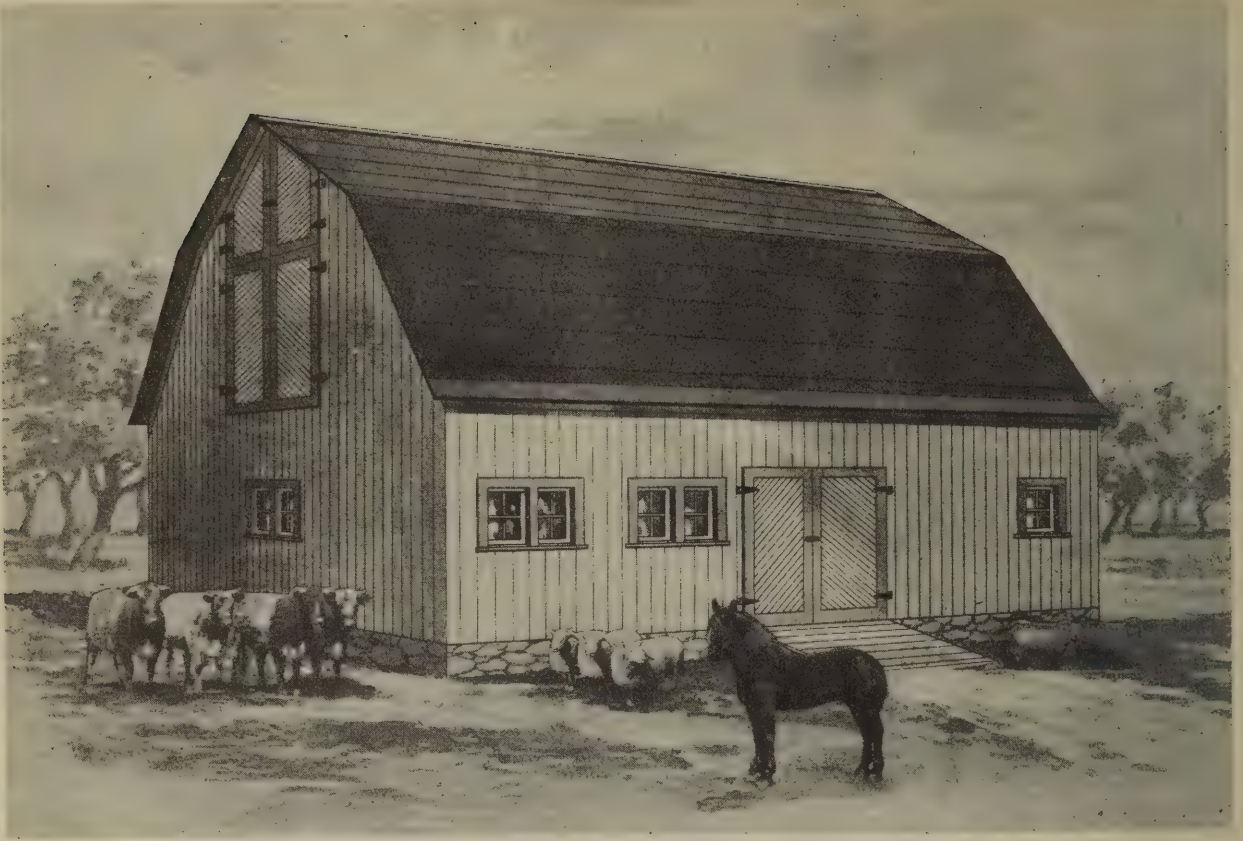

This barn is 32 feet wide by 62 feet long, and will accommodate thirty cows, allowing 3½ feet for each. Trap doors are placed in the hay mow directly above the feed way, through which the hay may be thrown into the feed car and distributed to the stock with very little labor, or a silo may be built at one end of the barn, and the car utilized to bring in the silage from the outside.

All things taken into consideration, this is one of the most practical and sanitary up-to-date buildings of its kind that may well be designed. The construction is simple, yet perfectly strong, and if built after our plans, will provide a perfectly sanitary and modern structure at a very moderate cost.

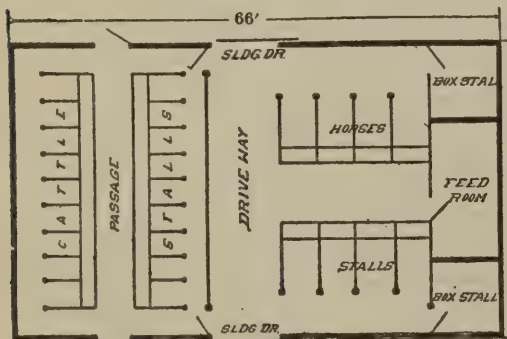

PRICE, INCLUDING STABLE MATERIAL..... **\$643.00**

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

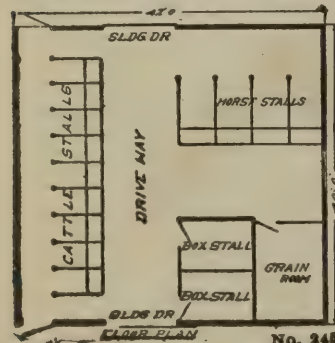

OUR "PREMIUM" BARN DESIGN

No. 247

we believe this arrangement will suit the majority of our customers owing to the economy in feeding the stock which this arrangement makes possible.

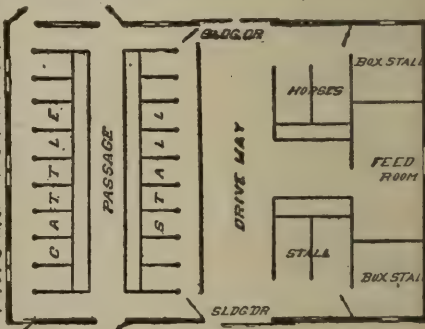

The stable ceiling proper is 8 ft. high in the clear with girders supporting the hay loft which extends the entire length of the barn. The roof is of the Gambrel, or self-supporting style, there being no posts or perloins in the center to obstruct the hay-carrying apparatus. This barn has a hay capacity of $1\frac{1}{2}$ tons for every foot of its length and will hold all the hay necessary for the stock which it accommodates.

No. 246

THE general construction of this design is similar to our "Majestic" barn design. It is of the joist frame or built-up timber style of construction and is in many respects the same as our Majestic design except that it is only 12 feet high. In this design the driveway is across the barn instead of lengthwise, there being a pair of doors at each side of barn to permit driving through with fodder for feeding purposes. The smallest of these designs will accommodate nine head of cattle and four horses besides having 2 box stalls and large feed room. While the photograph shows but one pair of doors on each side of the barn, we furnish sufficient material for two smaller doors in the rear of the cattle stalls wherever our floor arrangements are followed.

The interior arrangements shown on the stable floor may be altered when individual needs require, but

No. 248

The barn is well lighted and ventilated, and if placed on a concrete foundation will have all the sanitary conditions of the most modern, up-to-date barn. The material we supply for this as for all other designs is strictly **BRAND NEW** stock as outlined in our **Material Specifications** on a former page to which we invite your attention. We also want to repeat that we furnish free plans, specifications and a complete list of material with each of these designs in accordance with our **FREE PLAN** offer already explained.

We furnish this design in the following sizes and shall be pleased to answer any inquiries regarding same. Prices do not include material for Stable partitions.

Name	Number	Size	Height To Eaves.	Height To Top of Roof.	Price
Premium	245	40x42	12 feet	32 feet	\$527.00
Premium	246	40x56	12 feet	32 feet	647.00
Premium	247	40x66	12 feet	32 feet	718.00

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

OUR "SUPERIOR" BARN No. 262

IN this design we show a moderate size barn for city or suburban use where a few horses and one or two cows are kept. The appearance of the barn is everything that can be demanded in a barn of this class. The construction is substantial and cheap, yet not cheap enough to detract from its general appearance or usefulness. It is of the balloon type of construction with 2 x 6 for studding and drop siding for the exterior.

The floor is of cement as well as driveway leading to it, and the barn should be placed upon a concrete foundation as shown in our Blue Print Plans.

The size of this barn is 23 ft. 6 in. wide by 40 ft. in length and 12 ft. 6 in. to the top of the plate. Stable is 9 ft. in height with a hay mow above. The capacity of the hay mow is ample for a barn of this size, altogether we believe it meets the requirements of the class for which it is intended.

The material we supply for this building is fully explained on another page, as is also our **Free Plan Proposition** which is applicable to this design as well as to all others.

We can furnish our Premier guaranteed barn paint for any of these designs.

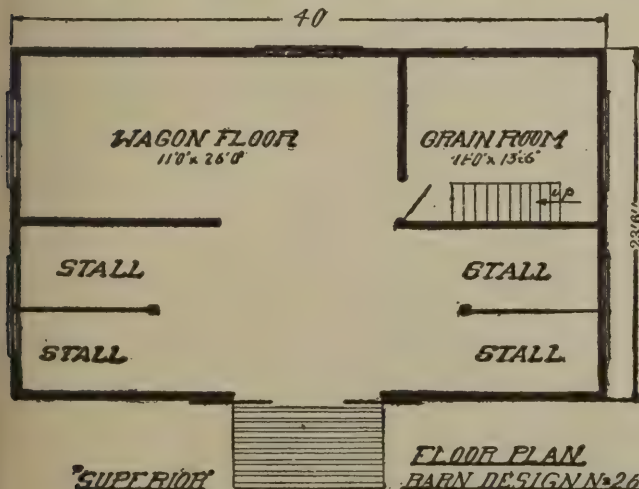

We know that, considering price and quality, Premier is the best barn paint on the market for this purpose.

We have the amount required for two-coat work on all our designs and promptly upon applications will be pleased to name you a price. Also bear in mind we can furnish Hay Carrier apparatus for any of these barns. Prices quoted in our general catalog.

The price we are asking for the material makes it a big bargain proposition which those who contemplate building should take advantage of without delay.

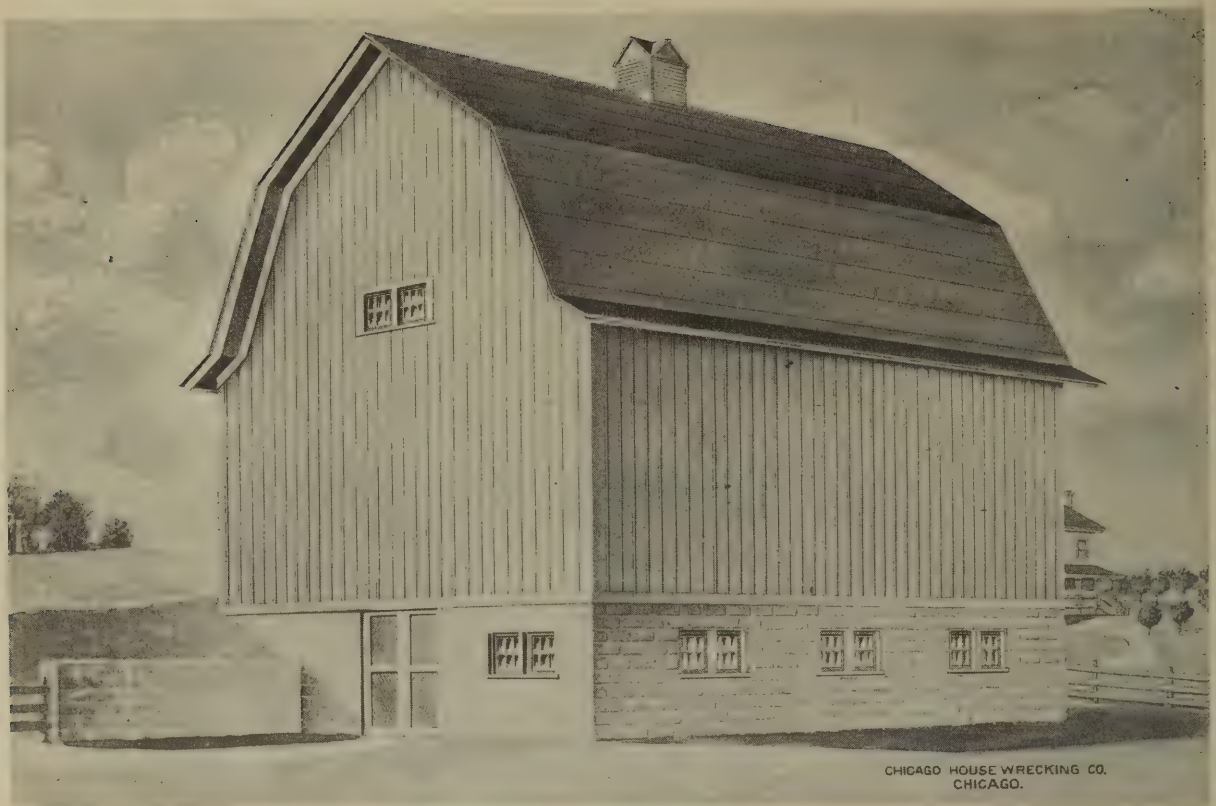

Size 23 ft. 6 in. x 40 ft. Price, including all necessary material for Stable partitions.....

OUR BANK BARN DESIGN No. 203

OUR No. 203 Barn we illustrate above is a modern up-to-date bank barn of the most approved type of construction. A careful comparison of our blue print plans will convince the most skeptical that no points have been overlooked. While the illustration we show is for a barn 48 feet long, this barn may be built any length by increasing the sections 16 feet each, to the length that may be desired.

This building is of the most approved plank frame style of construction, all of the timbers being built up from 2 inch plank. The outside posts are made up of three pieces of 2x8, making them 6x8 in size. They are securely held in place at the bottom by the joists on each side and as these joists lap about 12 inches on each of the center girders, where they are spiked together, it forms a very substantial tie for the building at the bottom. The side plates on top of the posts are made up of three pieces of 2x8, and the end plates of 3 pieces 2x6, making them 6x8 and 6x6 respectively. The method used in holding the building in place in the center is by means of a truss, the same as is used in modern steel construction where it is not practical to obstruct the space with posts and cross beams.

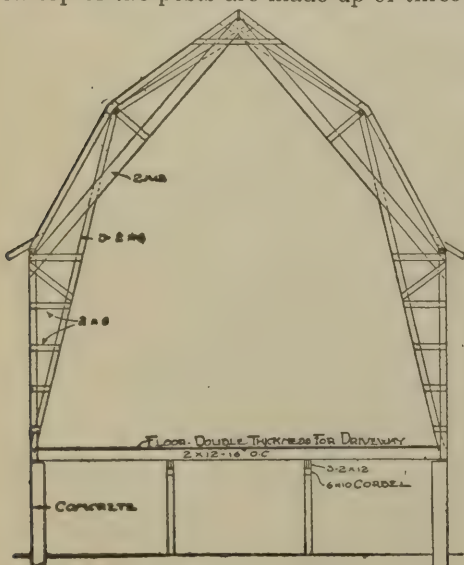

Great care and study have been given the construction of the trusses. These are placed 16 feet apart and in designing these trusses, the main object has been solid and economical construction, scientific bracing by ingeniously interlacing the supporting members of these trusses, the details of which are fully explained in our blue print plans. These trusses are so simple, and our blue prints so plain, that any ordinary mechanic can construct same.

The side and end bracing of this barn is of the diagonal style. The braces extend from the bottom plate between each pair of posts, diagonally across to the top plate and are re-enforced by horizontal girths let into these braces which also form the nail tie for the boards.

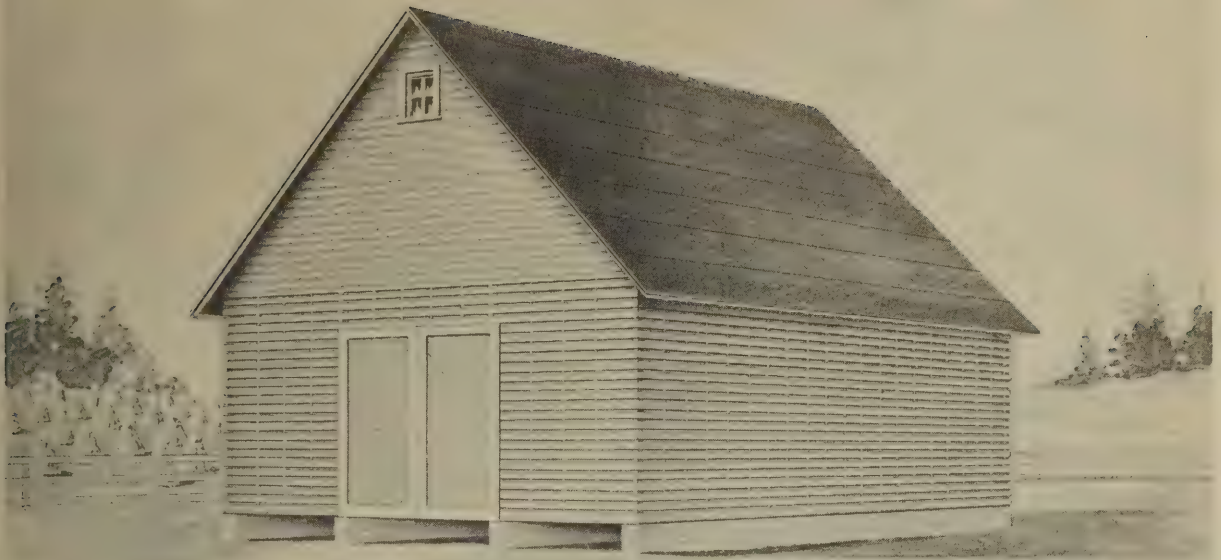

This 48 ft. barn has a 16 ft. driveway through the center with a hay mow 16 ft. wide on each side. We furnish 2x6 tongued and grooved flooring for the driveway and 1x6 tongued and grooved flooring for the mows.

A pair of sliding doors, provided with the best hangers and track made, give entrance to the driveway on the upper side of the barn. If desired, another pair of doors may be placed on the opposite side, which would be the side shown in the illustration, so if threshing is to be done in the barn the straw may be blown out of these doors. All the windows and material for doors shown in the plans are included in the price, but no stable material.

No. 203.	Size of barn, 36 ft. wide, 48 ft. long and 18 ft. posts.	Price.....	\$643.00
No. 204.	Size of barn, 36 ft. wide, 64 ft. long and 18 ft. posts.	Price.....	820.00
No. 205.	Size of barn, 36 ft. wide, 80 ft. long and 18 ft. posts.	Price.....	990.00

CHICAGO HOUSEWRECKING CO
CHICAGO

DOUBLE CORN CRIB DESIGN No. 300

IN the above we illustrate a modern double corn crib 28 feet wide by 40 feet long and 12 feet high. This crib has a capacity of about 7,000 bushels of corn and 3,000 bushels of small grains. The driveway is 10 feet wide and 10 feet high with a 9 foot crib on each side. The studdings are 2x6 placed 16 inches on centers and the joists are placed some distance apart, except over the driveway where they are placed 12 inches on centers. The studdings on the sides of driveway are extended above the plate right up to the rafters, and the entire space up to the roof may be used for corn.

The crib is covered on the outside with 1x6 bevel cribbing, except the gables, where drop siding is used. Bevel cribbing is also used on the inside of the corn cribs. Below the driveway floor the cribbing is nailed to the outside of the studs, but above the floor to the inside of studs to within two feet of roof.

The space above the driveway is floored over and lined up solid on the sides 10 feet high with 1x6 dressed and matched flooring. Above this space another set of joists are placed and covered with boards for a walking floor. A cupola should be built in the roof with a door on one side. The corn and other grains is conveyed by an elevator to the top where it is received by movable spouts and distributed to any part of the building desired. The space above driveway may be divided into any number of bins desired. In this way the crib will not only provide storage for a large quantity of corn, but will answer the purpose of granary of liberal capacity as well. By placing Chutes with slides in the floor the grain may be easily and quickly taken out and hauled to market, or if by any chance, it should heat at the bottom a portion of it could be taken out from the bottom and by means of the elevator placed on top with very little labor.

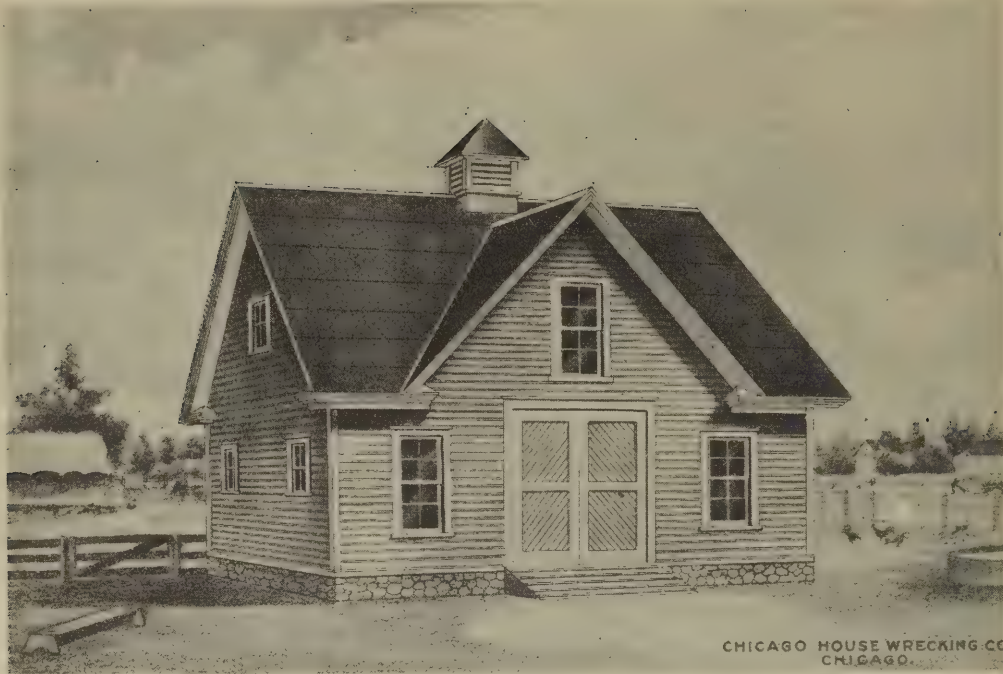

This crib is exceptionally strong, and well braced in every part. We can furnish Blue Print plans, and material lists for this design for the same price as any of our house or barn designs.

We can also furnish this crib in longer lengths at proportionate increase in price. Write us your wants.

PRICE, **\$407.00**

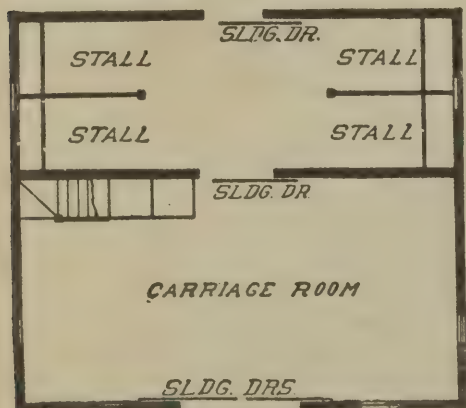

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

OUR "UNIVERSAL" BARN DESIGN No. 45

IN our Universal Design, we show another barn adapted to city or suburban use. This barn may be built at a very moderate cost and will accommodate four horses, with plenty of space for carriage room and feed bins, and a hay capacity in the loft of about 2 tons. The stable is intended to be 9 feet high, which will leave ample room on the second floor for the storage of hay and other fodder. The barn should be placed upon a concrete foundation with a cement floor on the first floor, which is more sanitary as well as cheaper in the long run than a wooden floor can possibly be.

In external appearances, this barn presents many attractive features and is well adapted to city use, though, of course, it may be built anywhere.

FLOOR PLAN
UNIVERSAL BARN DESIGN No. 45B

It has a driveway through the center, with a pair of sliding doors at either side and a door in one gable to permit the taking in of hay into the loft. This design is provided with double-hung or check-rail windows, which gives it the appearance of a house and adds much to the general attractiveness of the design, as well as providing ample light and ventilation for the interior.

In size it is 26 feet 8 inches wide by 30 feet long and 9 feet high to the eaves. The hay loft is about 12 feet high to the comb of the roof, and we believe this barn is well adapted for many classes of people.

PRICE, Barn 26 feet 8 inches wide x 30 feet long.....**\$255.00**

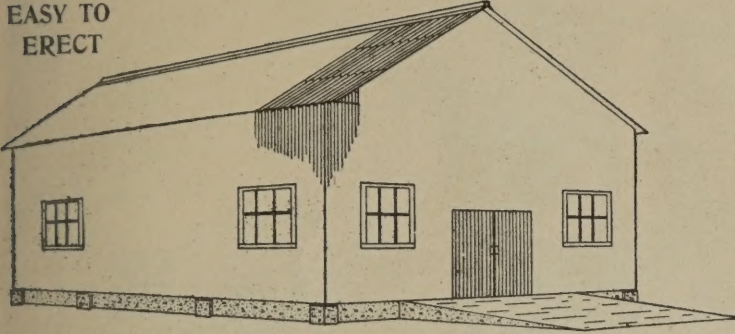

We can also furnish this same design Barn in a smaller size, being 16 feet wide and 24 feet long by 12 feet high for.....**\$178.00**

This price includes material for stable partitions.

CHICAGO HOUSE WRECKING CO., 35th & IRON STREETS, CHICAGO.

ALL-STEEL "FIRE PROOF" BUILDINGS

EASY TO
ERECT

\$342.50 Buys all the required material to erect this building, size 18 feet wide, 24 feet long, 11 feet 9 inches high at the eaves.

This size building would make an ideal garage, blacksmith shop, machine shop or a general work shop. It is strictly fire-proof, made entirely of steel.

We furnish all the necessary material for the construction of this building, which is all brand new, consisting of the steel frame, properly fabricated in our Structural Steel Shop, complete with the necessary bolts, rivets, plates, etc., ready for erection.

The covering we furnish consists of extra heavy corrugated galvanized roofing and siding, doors, windows and all other necessary material required with the exception of the flooring, (which we suggest you make of concrete).

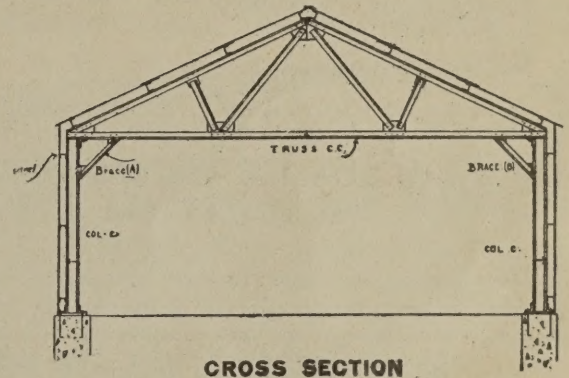

Easy to Erect

It does not require an expert to erect these buildings. With the complete information and the clear drawings which we furnish, any one reasonably familiar with building construction or handy with tools can erect them.

Be sure and get our prices before purchasing.

ALL-STEEL "FIRE PROOF" BUILDINGS

\$945⁰⁰ COMPLETE
AND UP Ready to Erect

READ OUR
OFFERS
ON
PLANS

\$945⁰⁰ = BUYS THE NECESSARY MATERIAL TO CONSTRUCT THIS BUILDING, SIZE 30 FEET WIDE, 60 FEET LONG, 15 FEET 6 IN. HIGH AT THE EAVES, MADE ENTIRELY OF STEEL.

This size building would make an exceptionally fine factory, ware-house, storage shed, auto garage, etc. It is especially designed for these purposes. Being constructed entirely of steel, it can be erected in the fire limits of any town or city and will save you money on insurance over any other building construction.

GENERAL SPECIFICATIONS AND DESCRIPTION OF MATERIAL WE FURNISH FOR THE CONSTRUCTION OF OUR STEEL BUILDINGS.

Material List

Our list of material is complete. Plans will show exactly where each piece of material is used in the building, each item being numbered and correspondingly numbered on the plans. All material is properly punched and fabricated. It does not require an expert to erect these buildings; any one handy with tools can do it.

Steel Frame

We furnish the complete steel frame consisting of steel trusses, columns, steel roof purlins, girths, braces, plates, bolts and rivets, all material properly punched, made up and ready to erect.

Roofing and Siding

We supply the required quantity of extra heavy corrugated galvanized roofing and siding, $1\frac{1}{2}$ or $2\frac{1}{2}$ " corrugation, of such lengths are necessary, rivets or bolts, lead washers and steep strips for fastening roofing to steel stringers, also galvanized corrugated apron ridge roll for ridge of roof.

Sash and Doors

We furnish all doors and sash as specified. The doors we can furnish in wood or made of heavy galvanized corrugated steel, reinforced with angle iron frame and fitted with rollers, track rail and door latches. We also supply the necessary framing lumber for the sash and doors. This material we furnish only in stock sizes and lengths; same must be cut and fitted on job.

All material we furnish you for the construction of these buildings is brand new.

Free Plans

We furnish our customers complete drawings, specifications and bills of material. All we require is a deposit of \$2.00. This amount will be placed to your credit if you purchase the building.

Our steel buildings are designed and the plans are prepared by expert steel engineers, great care being used to design the best construction as simple as possible so any one reasonably familiar with building construction can erect them.

Any information required will be furnished by our Engineering Department.

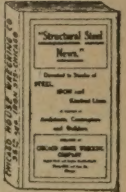

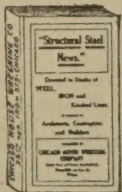

WRITE FOR FREE COPY OF "STRUCTURAL STEEL NEWS"

Every Architect, Contractor and Builder should have a copy of this valuable book in their possession. This book contains complete tables of the weights, dimensions and safe loads of all sizes of structural steel shapes. It describes and illustrates all the various forms of structural steel.

In addition thereto, it illustrates, describes and quotes almost everything in the iron and steel line used in the construction of all classes of buildings. We list in this book standard classification of merchant bar steel, etc., also tables of weights and sizes of steel sheets and plates with a stock list for quick shipments.

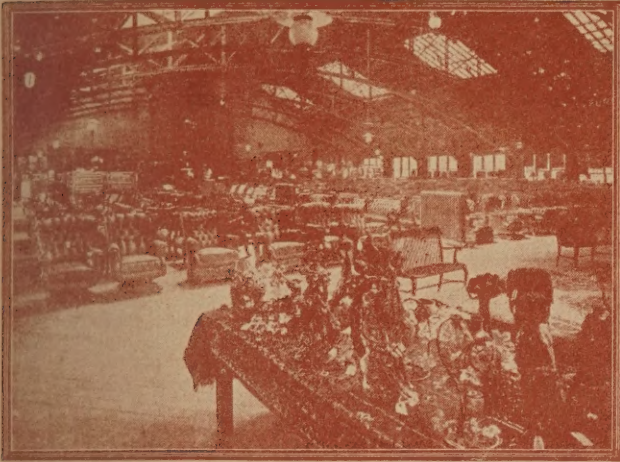

This book also contains a complete list of the numerous bargains we have in iron and steel products for building, etc. From this list you can no doubt select numerous articles at prices that will save you 30% to 50% over the cost elsewhere. No matter what you wants may be, you will find in this book practically everything needed in the iron and steel line.

Send us your name and address for a free copy of this book. We want you to have this book on your desk and constantly refer to it and suggest that you write at once for a free copy of Structural Steel News.

PLUMBING MATERIAL For ANY HOUSE DESIGN IN THIS BOOK

THE MODERN BATH ROOM.

go over these pages carefully and you will be able to form a very good idea as to the amount of money you can save on your complete Plumbing Equipment.

Many people have a very wrong idea in regard to the difficulty of Plumbing Work. With our special system of iron pipe connections, everything is reduced to the most simplest connection. No difficult soldering, wiping of joints or lead work required. Any man who can cut and thread iron pipe and screw it together, can do this work. About four days' time should be sufficient for one man and a helper to completely install all of the roughing-in material for the Plumbing Fixtures in any House Design in this book, and some of the more simpler houses, where no bath room is specified, one day's time will do the work.

PROMPT SHIPMENT.

We have all this material ready for prompt shipment, and can get your order out and filled more completely and more satisfactorily than any other concern in the country, therefore, when you place your order for whatever House Design you have decided on, be sure to instruct us to ship the Plumbing Material. Our Plumbing Systems are designed especially for these various houses, and it is to your own best interest to specify our material. Remember, we guarantee satisfaction on every single item or your money will be refunded, and any material not satisfactory can be returned to us at our freight expense.

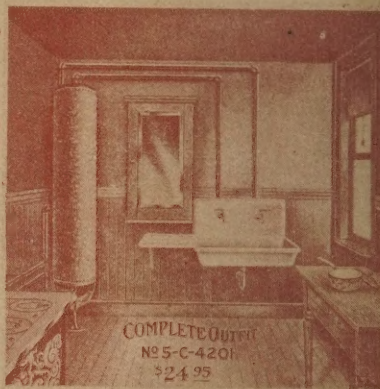

YOU can depend upon it that the matter of the Plumbing Equipment for whatever House Design you select in this book will be one of the least of your troubles, if you will leave the matter in our hands. Note that at the bottom of the page of each description of the different House Designs as given in this book, we quote separately on the complete Plumbing Equipment.

These figures are guaranteed. We agree to furnish the complete Plumbing System as described at the price quoted for each House Design as mentioned in this book, and when you place your order, all you have to do is to tell us to ship the Plumbing Material with the lumber, etc., and we will see that the order for the Plumbing Material is properly entered and shipped right out to you without a moment's delay.

No trouble or worry on your part. We do all the planning. Every part furnished to the most minute detail required to complete the entire installation of the fixtures from the ground line up.

Be Sure to Notice the Plumbing Section of Our Big General Catalog.

For a complete description of our various Plumbing Propositions, we refer you to the Plumbing Section of our Big General Catalog. Be sure you

THE MODERN KITCHEN.

Modern Steam, Hot Water and Hot Air Heating Plants

BACKED BY OUR GUARANTEE BOND

No house can be considered complete without a modern means of heating. We are better equipped to fit you out with a modern, up-to-date Steam, Hot Water or Hot Air Heating Plant than any other concern in the country. We have plants especially lined up for each House Design in this book. We furnish you complete plans and instructions, covering every minute detail in connection with the work, and by following these simple plans and instructions, you will have no difficulty whatever in getting the plant successfully installed. We will cheerfully loan you all the necessary tools, and we help you out in every way.

Be sure to write for our Special Heating Catalog, "Cold Weather Comfort;" tells you all about our heating proposition.

THE BEST TIME TO INSTALL THE PLANT IS WHEN THE HOUSE IS BEING BUILT.

You will make a big mistake if you do not install a modern heating plant, considering the very small investment necessary and there will never be a better time to install this plant than when the house is in the course of building. Then is the time when you can get the pipes in the walls and out of sight, and you can make a much neater and more satisfactory job in every way. You will find the prices quoted under each design in this book for steam, hot air or hot water heating plant, and in sending us your order for any of these houses, if you will just mention to add on the hot water heating plant or the steam heating plant or the hot air heating plant, as the case may be, we will have the matter referred to our heating department at once, and will have this material included with the shipment and the plans forwarded to you. You will be put to no further trouble whatever in the matter.

Remember, we have special plants designed for every House Design in this book. We know our own houses better and we are better able to furnish the heating equipment than any other concern, and you will find our prices far below any possible competition. Our prices are right; our plants are right, as is evidenced by the thousands of satisfied users of our heating plants in all parts of the country and we are entitled to your order. We assure you that if you intrust the matter of heating to us, your order will be promptly and efficiently handled and we will fit you out with a plant that will be a standing advertisement for us in your locality and one that will give you absolute satisfaction in every way. We guarantee satisfaction. Every heating plant we sell is backed by our
